## warranty

ACDelco Filters are warranted nationally against faulty workmanship or materials for a period of 1 year or 20,000 km from the purchase date.

### **WARRANTY CONDITIONS**

#### **This warranty does not cover:**

- / Normal wear & tear.
- / Loss of time, inconveniences, loss of use or any other consequential damages.
- / Labour for removal from and replacement of the unit from the vehicle unless prior written approval has been obtained from ACDelco.
- / Parts which have been subjected to deliberate abuse.
- / Conditions resulting from abnormal wear, negligence, alterations or accidents.
- / Incorrect fitment.
- / Parts used in an incorrect application or parts that are not used for their intended purpose.

### **DISCLAIMER**

Certain information in this catalogue has been compiled from data published by original equipment manufacturers and other parties. ACDelco is unable to warrant the accuracy of third party data, and does not accept responsibility for loss or damage of any kind caused as a result of such data being inaccurate.

### **COPYRIGHT STATEMENT**

No part of this publication may be reproduced, stored in any retrieval system or transmitted in any form or by any means, including but not limited to electronic, mechanical, photocopying, recording or otherwise, without the prior written permission of ACDelco. This includes all texts, illustrations, tables and charts.

# Why Fit ACDelco air, cabin, fuel & oil filters

Oil, air and fuel filters are vital components in any engine. They provide the first line of defence from harmful contaminants that can seriously degrade engine performance and lifespan. The decision to use ACDelco Filters is one of the easiest and most cost effective ways of providing the protection engines need, with the quality and price customers expect. ACDelco Filters are a premium range of filters for the Australian market. They consist of Oil, Air, Fuel and Cabin Filters covering numerous different applications from automotive to light commercial to off road. ACDelco Filters are manufactured to ISO TS16949:2002 and ISO 9001 international standards.

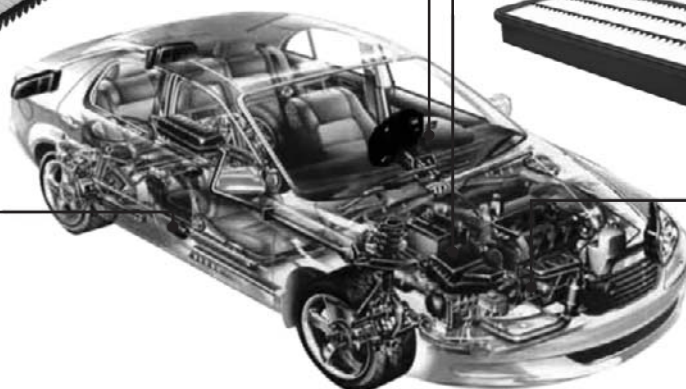

## Cabin Filter

ACDelco Cabin Filters help protect vehicle passengers from harmful gases and airborne allergy irritants, and helps protect the vehicle's interior surfaces and trim from airborne dust and dirt.

## Air Filter

ACDelco Air Filters are vital in preventing the contamination of the intake system. It prevents contaminated air being mixed with the fuel before entering the combustion chamber.

## Fuel Filter

ACDelco Fuel Filters make up the other component in keeping the intake system clean. Clean fuel will prolong the life span of the injector and maintain higher fuel efficiency.

## Oil Filter

ACDelco Oil Filters are easy to install and their primary aim is to reduce wear and tear on the engine. The oil filter removes contaminants from the frictional parts which helps the cooling and sealing of the engine to promote efficiency and a cleaner environment.

# About ACDelco air filters

## BACKGROUND

ACDelco Panel and round Air Filters trap microscopic particles that can damage the engine, cylinder walls, pistons and piston rings. ACDelco Air Filters have been designed and developed with the original equipment and application needs considered. They meet or exceed the application requirements with soft, pliable seals for leak free installations, excellent high temperature integrity and engine vibration and temperature durability.

## FEATURES & BENEFITS

ACDelco Air Filters employ resin impregnated media and optimal pleat counts to increase their contaminant holding capacity.

ACDelco adheres to strict quality control standards in the production of ACDelco Air Filters. Raw materials used are tested to ensure compliance to specifications and filters are tested to meet customer expectations for fit, form and function.

## PANEL TYPE AIR FILTERS

- / Urethane gasket, low effort installation provides maximum seal.
- / Linear airflow direction allows only clean air to enter the engine.
- / Bonded folds prevent dust from entering engine.

## ROUND TYPE AIR FILTERS

- / Platisol end seals prevent dirt from entering combustion chamber.
- / Metal clips keep dirt and dust in the filter.
- / Inner screen provides backfire protection for media.
- / Resin impregnated media provides greater dust and dirt holding capacity.

# About ACDelco cabin air filters

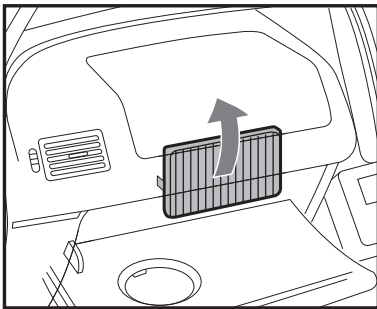

## BACKGROUND

Unfiltered air inside a vehicle contains minuscule pollutants that can aggravate health concerns of the millions who suffer from respiratory problems (including asthma which is a real problem for many Australians).

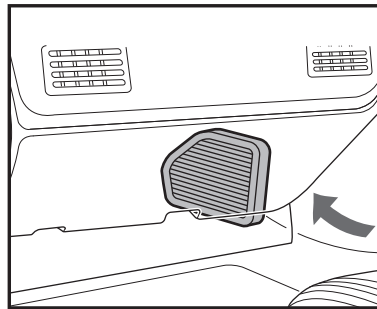

A lot of people do not realize that since the 1990's many cars sold in Australia have been fitted with cabin air filters to ensure a filtered air supply into the cabin. These filters are generally a paper or plastic bodied panel and can typically be found in one of three places:

- / In the engine compartment where the air is initially drawn into the ventilation system.
- / Behind the glove box.
- / Behind the dash panel above the kick panel.

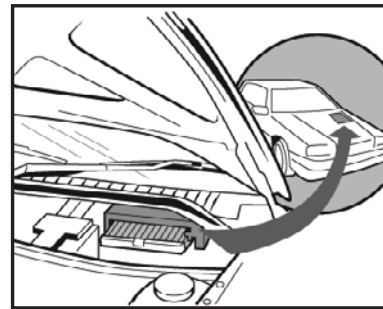

## Typical Cabin Air Filter Locations

*Glove Box*

*Under Dash*

*Under Bonnet*

## FEATURES & BENEFITS

- / ACDelco Cabin Air Filters have advanced filter media technology which helps keep pollutants out of the interior for more comfortable travel.
- / Are highly durable and reliable.
- / Can remove most allergens from the air entering the vehicles ventilation system.
- / ACDelco Cabin Air Filters are available to suit most makes and models.
- / Since pollution inside a vehicle can be many time worse than the normal outside air, it is important to replace your filter as a general rule every 30,000 km's, but more frequently in harsher conditions.

ACDelco Cabin Air Filters help improve cabin air quality by reducing air borne particles and contaminates such as:

- / Pollen
- / Mould
- / Odors
- / Fumes
- / Smoke
- / Dust

# About ACDelco fuel filters

## BACKGROUND

Fuel filters are used to protect the vehicle fuel system from dirt, rust, scale and water contaminants. These may block or wear out carburetors/fuel injectors, causing poor vehicle performance or even engine failure. ACDelco Fuel Filters are important in preventing engine contamination and help provide a long, trouble free engine life. They are available for inline carburetor and fuel injected applications. ACDelco Fuel Filters are designed and developed with the original equipment and application needs in mind. They meet or exceed all application requirements and assist in providing the correct overall mix of filtration performance, materials compatibility, flow management and durability.

## FEATURES & BENEFITS

ACDelco adheres to high quality control standards in the production of ACDelco Fuel Filters. Raw materials used are thoroughly tested to ensure compliance to specifications, and filters are tested to meet customer expectations for fit, form and function.

## FUEL FILTERS TO SUIT CARBURETOR APPLICATIONS

- / Direct installation into the fuel line adds greater versatility when used with other fuel system protectors.
- / Resin impregnated pleated paper filtering media increases filter capacity.
- / Tube type fittings allow easy installation in all types of fuel lines.

## FILTERS TO SUIT FUEL INJECTED APPLICATIONS

Meets the filtering requirements of all types of fuel injection systems. The design includes:

- / Seams designed to withstand the high pressure of fuel injected systems.
- / Filter media phenolic impregnated to increase filter capacity, efficiency and rigidity.
- / Inner end plates made of specially coated material that is chemically resistant to all fuels currently available.
- / Fittings in a variety of styles including O-ring, tube and new quick connect style providing easy installation with less labour and tooling.

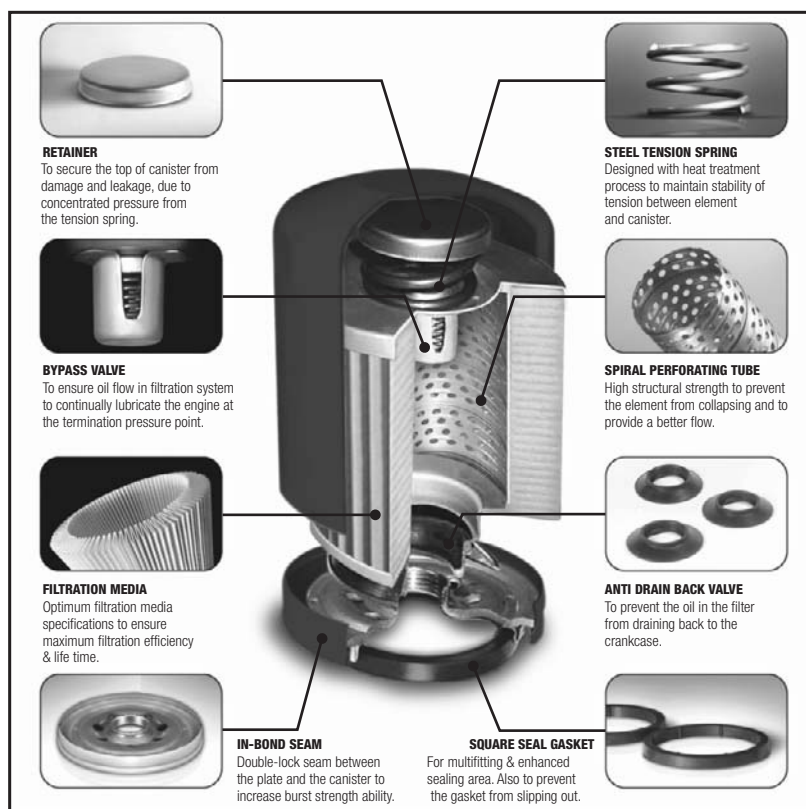

# About ACDelco oil filters

## BACKGROUND

ACDelco Oil Filters are used to remove harmful contaminants from the engine lubrication system, and contribute to consistent oil flow management. ACDelco products meet or exceed all application requirements and provide a mix of filtration performance, flow management (hot, cold, and with water present) and product durability.

## FEATURES & BENEFITS

ACDelco adheres to high quality control standards in the production of ACDelco Oil Filters. Raw materials used are thoroughly tested to ensure compliance to specifications and filters are tested to meet customer expectations for fit, form and function. The advanced design of ACDelco Oil Filters helps prevent contaminants from entering the engine by filtering out microscopic particles.

## DURAGUARD ADVANTAGE

The advanced ACDelco Oil Filter design helps trap harmful microscopic contaminants. The cellulose and synthetic fibres used in Duraguard oil filters can effectively trap contaminants as small as 25 microns, (one third the width of a human hair). The filter media determines efficiency, performance and useful life of an oil filter. Duraguard filters are designed to have high efficiency capabilities throughout the entire life of the filter. Other filters may only provide high efficiency at the latter part of the filter life.

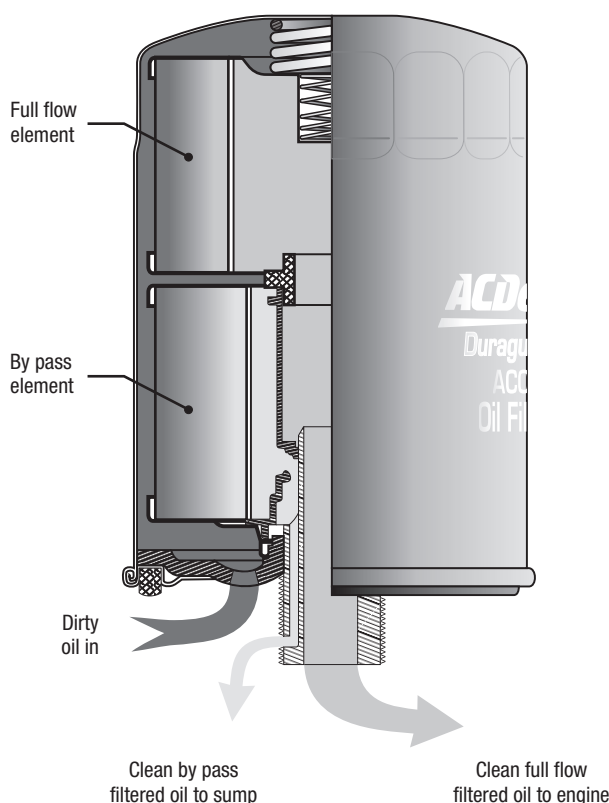

# About ACDelco dual flow oil filters

## DUAL FLOW OIL FILTERS

ACDelco Dual Flow Oil Filters contain two separate elements inside the one housing. This allows for clean oil to be delivered to the engine lubrication circuit while providing the additional filtering required by Diesel engines. One of these is a full flow element which filters the oil and supplies it to the engine's lubrication circuit. The other element is a bypass element, the oil which passes through this element is returned back to the sump. The bypass element has a finer micron rating, and is therefore a more efficient filter than the normal full flow elements. This arrangement allows the engine to maintain constant clean oil supply, while providing continual high filtration of the oil in the sump.

The two different oil streams are separated by an internal tube arrangement. Once oil has passed through each of the elements, (from the outside to the inside), there are two separate chambers. One of these is for oil going back to the sump and one is for oil going to the engine. The spigot that the filter threads onto has two different outlets. Generally the engine outlet will be on the inside of the spigot and the bypass outlet will be on the outside of the spigot.

ACDelco have a range of quality dual flow oil filters to suit numerous Diesel vehicles.

Dual flow filter oil flow diagram

# Why is Changing An Oil Filter Important?

## FILTER FUNCTION

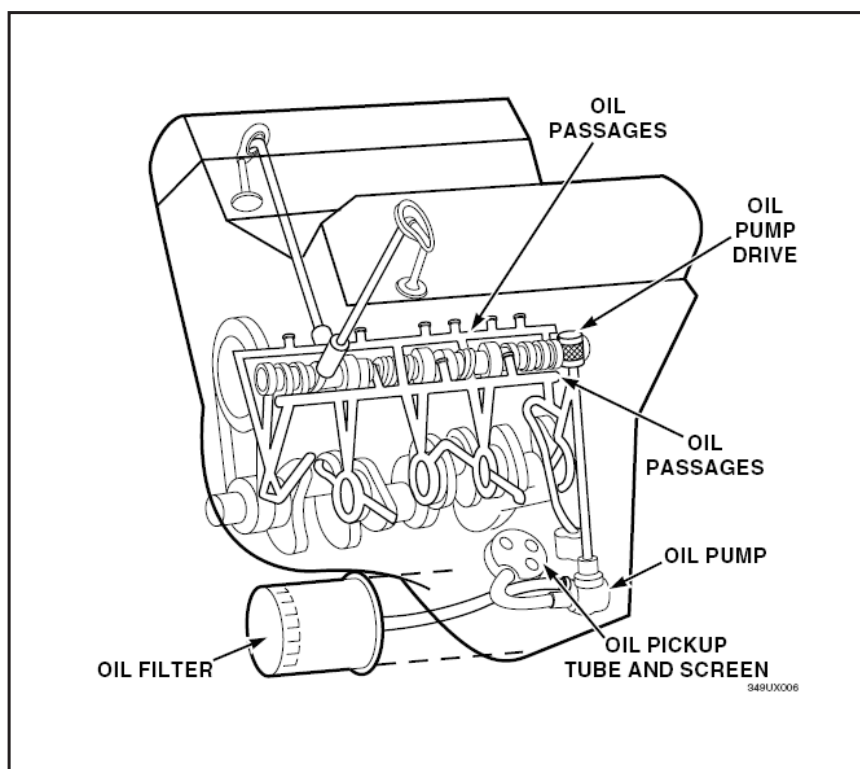

The engine oil filter traps harmful abrasive contaminants and prevents them from damaging engine parts. The importance of the oil filter becomes clear with an understanding of the operation of engine parts that are protected by the filter.

When the engine is running, oil enters the oil pump through a screened intake (oil pick-up). The screened intake is located in the crankcase near the bottom of the oil pan. Oil is drawn through the screened intake and forced by the oil pump through the oil filter and on to the engine's moving parts.

All moving parts and the cylinder walls require clean oil for proper operation. The oil filter cleans the oil, which is the "life blood" of the lubrication system. Cleaning takes place as oil passes through the filter element or filtering material.

ACDelco offers a variety of filters to effectively and efficiently remove harmful contaminants from the engine's fluid systems. The filter must withstand extreme fluid temperatures and resist high fluid pressures, without losing its filtering capacity. By using the best possible filtering material for the specific application, and designing its filters with unique features to accommodate the special needs of each system or vehicle, ACDelco provides maximum filtration efficiency to your customer's vehicle.

/ Oil has a big job to do. It cleans, cools, and lubricates. Use the best filter possible to protect the oil, and the engine.

*Typical engine lubrication system.*

## Not All Oil Filters Are Created Equal

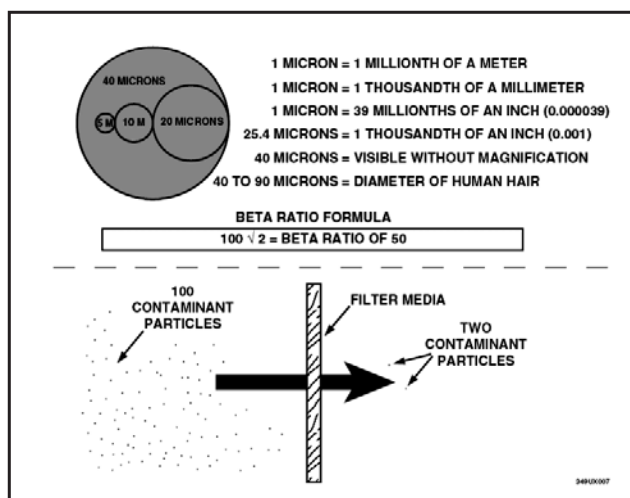

ACDelco has designed its filters to be durable in construction and to give optimum performance and filtration. For instance, a standard ACDelco Oil Filter can trap virtually all contaminants larger than 25 microns.

### Micron Rating

- / A Micron Rating represents the size of the contaminant particles the material will filter. A micron is a metric unit of measure used to determine the distance from one point to another. It is used like the centimetre and millimetre to measure the length, width, or diameter of objects. Approximately 40 to 90 microns equal the diameter of human hair.

### Beta Ratio

- / The Beta Ratio represents how efficiently the material will filter particles of that size. The Beta Ratio is the difference between the number of particles upstream of the filter and the particles downstream of the filter. The Beta Ratio is then calculated by dividing the number of particles ahead of the filter by the number of particles after the filter. For instance, if 100 contaminant particles are added to the fluid and after a single pass through the material only two remain, the filter is said to have a Beta Ratio of 50.

*Micron Rating and Beta Ratio.*

## Oil Filter Features

The primary features for oil filter elements are:

### Particle Size Retention

- / ACDelco has developed optimum particle size retention in filters by extensive testing. For example, the ACDelco Full-Flow Oil Filter traps virtually all contaminants larger than 25 microns.

### Dirt-Holding Capacity

- / Dirt-holding capacity is the amount of contaminant that can be removed and held by the filter until the filter stops filtering. ACDelco Filter capacity exceeds filter change periods specified by the vehicle manufacturers.

### Resistance To Oil Flow

- / When new, an ACDelco Full-Flow Filter with heavyweight paper and a maximised number of folds has a less than two psi pressure drop at a filtering rate of 15.1 litres per minute. At normal operating temperature, this low restriction to oil flow permits full engine oil pump pressure to reach the bearings.

### Ability To Withstand Environmental Conditions

- / The ACDelco heavyweight filter is reinforced with polyester fibres and impregnated with high quality resin to withstand extreme engine temperatures and pressures.

### ACDelco Oil Filters Feature

- / Small particle retention.
- / Increased dirt holding capacity.
- / Low flow restriction.
- / Excellent resistance to temperature and pressure.

# Oil Filter Fault diagnosis

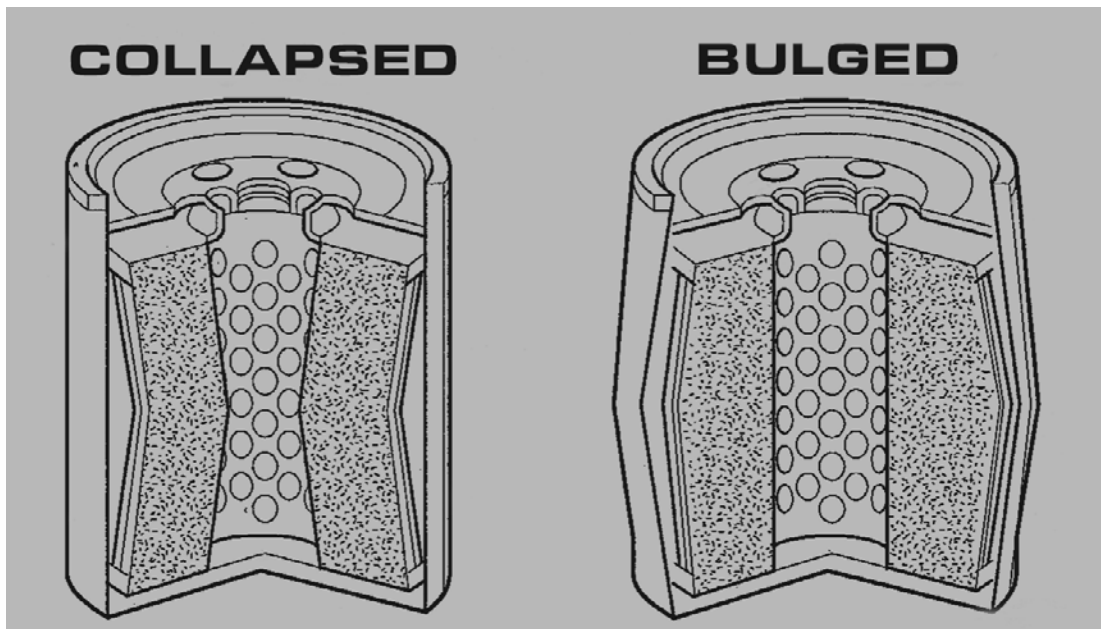

## **COLLAPSED OIL FILTER**

Oil filter components are designed to withstand differential pressures much greater than those experienced during normal operating conditions.

However, if the oil regulating valve, which regulates how much oil pressure is allowed through the filter and lubricating system, and the bypass valve on the engine become "sticky" from dirt and contaminants, it may allow too much pressure into the filter. If a collapsed filter element is discovered, perform a complete inspection of the filter bypass valve and the pressure regulator valve, as well as a review of the engine and its maintenance history.

## **BULGED OIL FILTER**

When the regulating valve has become excessively dirty, it can get stuck in the closed position. When this happens, the oil that the oil pump sends to the engine increases in pressure. The excessive pressure can cause the oil filter to bulge out. In some cases, the oil filter can burst. A system that reaches 150 psi will deform most oil filters.

# Filters

## application list

Information in this application listing section has been compiled from data published from Original Equipment Manufacturers and other parties. This data may change from time to time and ACDelco is unable to warrant the accuracy of this data and does not accept responsibility for loss or damage of any kind caused as a result of such data being inaccurate.

Anti drain back valves are required in some applications due to the filter placement design on the engine - without this valve on these applications, the oil can drain back into the engine when it is switched off, resulting in delayed oil pressure at start up (light takes a long time to go out / or even a engine rattle at start up).

Bypass valve is required in some applications where the engine or oil pump design does not have a bypass valve included - this allows oil to bypass the filter element during periods of high oil volume requirements (high engine speeds) or if the element should become blocked.
