Quality, innovation and customer service aren't just catch phrases at Camco - they're our goals. And we work toward them every day, in every department from the front office to shipping. Each of our more than 800 employees stands behind the products that bear the Camco name.

When Camco began in 1968 with one employee and one product, there was little indication that we would experience the phenomenal growth that resulted in our being named to the North Carolina Top 100 by Business North Carolina for six years in a row. Hard work, determination and adherence to these ideals have enabled us to achieve great success.

We take pride in providing outstanding service. Most orders received by noon are shipped the same day. Our friendly, knowledgeable customer service staff stands ready to assist our customers with any questions.

Camco is a small, privately-held company with big aspirations. When you place an order with us, we'll demonstrate this with our actions. Let us help make your business as successful as it can be.

POWERBOAT STAND BASES

Stackable feature helps save space when not being used. Color coded stickers help match with corresponding size swivel top.

BOAT STANDS

Strictly for stabilization, boat stands are to be placed after the boat's entire weight is supported by keel blocking. The boat should be blocked on stable land and then stands placed down the length of the boat.

It is recommended that two stands be placed horizontally across from each other on the port and starboard sides in the aft position and two horizontally placed forward. A minimum of 4 stands is recommended in addition to a vee-top stand under the bow for sailboats. Stands should be placed no less than every 8' of boat length; on both the port and starboard sides.

Camco boat stand bases are powder coated and constructed of solid, cold-rolled, steel tubing.

Camco stands have been independently 3rd-party tested to withstand weight loads of more than 30,000 lb.

DETERMINING WHICH SIZE BOAT STAND BASE TO USE:

Camco sail and power boat stands are available in a range of sizes with minimum and maximum heights. The minimum stand height is the height from the ground to the topside of the plywood top when the steel threaded rod is rotated all the way into the stand with no threads showing.

The maximum height is from the ground to the topside of the plywood top when the steel rod is completely extended out of the base.

Best practice is to keep a minimum amount of threaded rod exposed and to keep the boat as low to the ground as possible depending on the depth of the keel.

A method commonly used to find the appropriate boat stand size is to subtract 6" from the boat's draft and the height of the blocking pile.

A. Boat Stand Tops

Our Vee Tops are designed specifically for front hull support on sailboats and some larger deep keel powerboats.

The Standard Swivel Top's thick plywood head is dip-painted and provides better rot resistance and cushion. Standard Swivel Tops and Premium Swivel Top Replacement Pad also feature counterbore screws which help prevent the chance of a screw coming in contact with the hull.

Premium Swivel Tops are made of high-density polyethylene with a non-marring TPE top to help protect hull.

Ball Mounts Ball mounts come in popular sizes, 2" x 2", 1-1/4" x 1-1/4", and are used to convert a receiver from a weight distributing to a weight carrying hitch. Ball mounts create a ball platform for attaching a hitch ball. The ball mounts or utility hitch bar length are determined by measuring from the center of the pull pin to the center of the hitch ball hole. The drop or rise is determined by measuring from the top of the mount to the top of the tongue (See ball mount selection chart). All 2" x 2" ball mount shank holes are 1", except 48280 and 48282, which have a 3/4" hole. (DURABLE POWDER COAT FINISH)

BATTERY CABLE & LUG ASSEMBLY

Camco's Premium Marine Quality Battery Cable & Lug Assembly is UL 1426 listed and manufactured to the highest ABYC standards.

Heat-resistant up to 105° C dry and available in black, red and yellow.

Pre-Assembled with Premium Marine Quality tin-plated, 95%-copper lugs, each strand of individually tinned wire provides the greatest protection against corrosion and oxidation available. Camco's Type 3 boat cable wire stays ultra flexible even in the most extreme conditions.

\$39.30

Caution: Allow to cool before handling.

Crimping Instructions:

Strip the wire 1/4" and insert it into the barrel of the terminal. Match the color of the insulation with the color of the crimp cavity on the crimping tool. Heat the crimped device with a heat gun until the tubing recovers and the adhesive melts and flows.

Adhesive Lined Heat Shrink Tubing

Crosslinked polyolefin tubing with an internal meltable sealant. Recovers to 33% of its original diameter. As it shrinks, the internal sealant melts and physically encapsulates the covered item. This tubing is especially useful as a moisture barrier in high humidity and corrosive environments. Used for strain relief, wire splices, breakouts, connections, solder joints, delicate wire terminations and end sealing of cables and tubing.

LIGHT BULBS

Camco offers both clamshell and bulk packages and we are committed to providing you a well designed product that has been developed through rigid adherence to product specifications. The nominal voltage for most of our bulbs is 12.0.

DESIGN VOLTS:	The voltage at which the lamp is designed for rated amperage, candlepower and life characteristics.
CANDLEPOWER:	The average value of total light output of miniature lamps at design volts.
LIFE HOURS:	The rated average life to be expected when operated at design volts. Actual service life can vary depending upon application.
SERVICE DESC.:	The major applications for each bulb. In most cases they can be used in many other applications.
FIG. NUMBER:	Refers to the diagrams on page sides.

A. Hose Hanger While on your boat washing off the sea water from your latest voyage, keeping your water hose near-by can prove to be a struggle—but not if you have a Hose Hanger from Camco! The Hose Hanger hook holds securely on to rails up to 1 inch in diameter. One-piece design features molded-in, standard-sized, male and female water connections, which allow it to connect easily—in-line—right between your water hose and spray nozzle. No more chasing your water hose around a wet, slippery boat that's rocking back and forth and no more fishing your water hose out of the sea. Made of the light-weight, impact-resistant ABS with silicone hose washer for a water-tight seal.

A. Armada® AquaBlock™ Waterproofing & Stain Repellent

Contains UV and Mildew Resistant Agents. Most mills, including Sunbrella®*, apply a fluorocarbon polymer to the cloth at the factory for waterproofing and stain repellency. This is the most durable and effective waterproofing technology currently known. A polymer is like Teflon® for cloth.

Armada AquaBlock uses virtually the same fluorocarbon technology as the mills do to last an entire season. Application is therefore more effective, durable and easier to use than a less compatible agent.

AquaBlock has been independently laboratory tested against the three leading waterproofing products in the marine industry and was found superior.

D. Hose Hanger While on your boat washing off the sea water from your latest voyage, keeping your water hose near-by can prove to be a struggle—but not if you have a Hose Hanger from Camco! The Hose Hanger hook holds securely onto round rails up to 1 inch in diameter. One-piece design features molded-in, standard-sized, male and female water connections, which allow it to connect easily—in-line—right between your water hose and spray nozzle. No more chasing your water hose around a wet, slippery boat that's rocking back and forth; no more fishing your water hose out of the sea. Made of the light-weight, impact-resistant ABS with silicone hose washer for a watertight seal.
