**Quality, innovation and customer service** aren't just catch phrases at Camco - they're our goals. And we work toward them every day, in every department from the front office to shipping. Each of our more than 800 employees stands behind the products that bear the Camco name.

When Camco began in 1968 with one employee and one product, there was little indication that we would experience the phenomenal growth that resulted in our being named to the North Carolina Top 100 by Business North Carolina for six years in a row. Hard work, determination and adherence to these ideals have enabled us to achieve great success.

We take pride in providing outstanding service. Most orders received by noon are shipped the same day. Our friendly, knowledgeable customer service staff stands ready to assist our customers with any questions.

Camco is a small, privately-held company with big aspirations. When you place an order with us, we'll demonstrate this with our actions. Let us help make your business as successful as it can be.

## The Olympian™ Catalytic Heating Element

features a low-density spongy texture which allows for perfect transport of the oxygen needed for combustion. The catalytic heating element is evenly impregnated with platinum, guaranteeing optimal oxidation of gas and elimination of the mix of dangerous gas emissions.

**Other brands** use higher density supports which obstruct proper oxygen transport. Platinum distribution in their supports is not homogenous. Part of the gas can be released without burning, resulting in serious health hazards.

### Innovative Weight Distributing Hitch with Adaptive Sway Technology

- Adaptive sway resistance
- Noise suppressed

#### Easy On/Off Sway Control

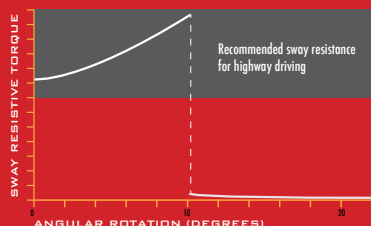

- Distribution bars are easy to move into place
- Turns off quickly for dangerous road conditions

#### Automatic Sway Control Disengagement

- Disengages for tight maneuvering
- Decreases wear

#### Eaz-Lift's Trekker hitch is designed with Adaptive Sway Technology

Sway resistance is instant when driving on the highway. Trekker reacts and increases resistance as needed when challenged with wind gusts and passing trucks. When taking sharper turns or tight maneuvering where sway control is unnecessary, Trekker disengages sway for improved handling.

**Eaz-Lift Trekker** is the perfect combination of premium weight distribution and sway control in an easy-to-install hitch. Trekker utilizes adaptive sway technology which goes above and beyond that of the competitors' weight distribution hitches. When towing and challenged with wind gusts and passing trucks, the Trekker reacts and increases resistance as needed! During sharp turns and maneuvering, when sway control is unnecessary, the Trekker disengages sway control completely for improved handling. When towing in dangerous conditions, such as slippery or icy roads, sway control is unwanted. Trekker's easy on/off sway control makes it a breeze to manually disengage. This feature also comes in handy when hooking-up and unhooking. Includes High-Low Shank.

**Round Bar Weight Distributing Hitches** Over five decades ago, Eaz-lift became the first patented weight distributing system in North America. Designed with fewer parts, forge tapered round spring steel bars provide a smoother ride with interchangeable bars that have positive latching action for operation. Eaz-Lift has a broad selection of weight distributing hitches that include right and left hand sway control mounts and bolt together ball mounts providing adjustability of ball height and ball mount angle. Each hitch includes hook-up brackets, spring bars, chains, ball mount, shank and hitch pin, clip and bolt package for adjustable hitches.

Do not overload any part of your towing system. Consult the vehicle manual for towing recommendations and limitations.

## Why Eaz-Lift Sway Controls are better

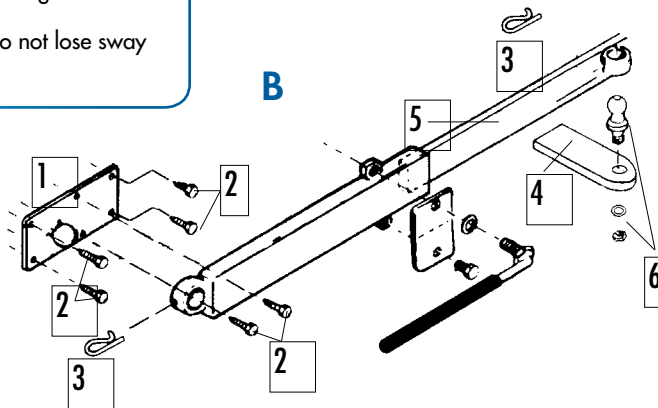

than cam-action type sway controls:

- Eaz-Lift Sway Controls do not create noise problems as does the cam action type.
- Eaz-Lift Sway Controls do not reduce road clearance.
- Eaz-Lift Sway Controls are easily released when road conditions do not warrant their use...unlike cam action type sway controls that depend upon hitch weight to operate and cannot be released on icy and oily road conditions where straight line action would possibly impair driving control.
- Eaz-Lift Sway Controls do not lose sway control ability in turns.

### A. Eaz-Lift Sway Controls

minimize sway caused by passing trucks and sudden wind gusts, and they do not lose sway control ability in turns. Double friction pads provide constant sway abatement. Eaz-Lift Sway Controls attach with easy socket and spring clip connectors remove for easy storage. **NOT FOR USE ON TRAILERS WITH SURGE BRAKES.** Trailers over 25 feet long or smaller broad-sided trailers may require two Sway Controls. Use left hand Sway Control part number 48381.

### A. Chrome-Plated Steel Hitch

**Ball** of solid, machined steel. To choose the correct hitch ball for your towing need, check the inside of your coupler and the desired length of the shank on the ball needed. Hitch balls are marked with size and rating; it is important to match coupler size with hitch ball size.

## Ball Mounts

Ball mounts are 2" x 2" and are used to convert a receiver from a weight distributing to a weight carrying hitch. Ball mounts create a ball platform for attaching a hitch ball. The ball mounts or utility hitch bar length are determined by measuring from the center of the pull pin to the center of the hitch ball hole. The drop or rise is determined by measuring from the top of the mount to the top of the tongue (See ball mount selection chart). All 2" x 2" ball mount shank holes are 1", except 48280 and 48282, which have a 3/4" hole. (DURABLE POWDER COAT FINISH)

ADAPTIVE SWAY TECHNOLOGY

### Eaz-Lift's Trekker hitch is designed with adaptive sway technology

Sway resistance is instant when driving on the highway. Trekker reacts and increases resistance as needed when challenged with wind gusts and passing trucks. When taking sharper turns or tight maneuvering where sway control is unnecessary, Trekker disengages sway for improved handling.
