The company

ELESTA relays GmbH established in the Swiss town of Bad Ragaz is one of the leading producers in the field of safety relays with forcibly guided contacts. A very comprehensive programme of safety relays enables ELESTA relays to offer the right product for just about all application areas.

Specializing in relays with forcibly guided contacts, ELESTA relays impresses its customers and the market over and over again with innovation which sets distinct benchmarks in the world of safety relays.

Products

Relays made by ELESTA are used in safety applications all over the world. The application areas are highly diverse and range from e.g. emergency-off switching devices over transport systems (lifts, escalators, etc.) right to complex machine controls. The focus is on ELESTA relays wherever humans and expensive equipment need to be protected from injuries and damage, respectively.

ELESTA relays attaches great importance to quality. With a rigid quality programme applied during the entire production process and 100% inspection before delivery we combine "Safety without compromises" and "Quality without compromises".

Depending on the type of relay, our production sequences are fully or partly automated, whereby highest quality is also guaranteed in the few manual operations. All products are made exclusively at our factory in Bad Ragaz, Switzerland.

Customer value

With ELESTA relays, however, the high quality is not only reflected in the products. Our maxim must stand up to highest demands also in the close cooperation with our customers. The majority of our deliveries, for example, are shipped within one week from receipt of the order, and we promise to deal with your technical enquiries within 24 hours.

An intensive cooperation with our customers is very important to us. Our specialists are ready to support you in the choice of the correct relays for your application, train your personnel in matters of safety relays and make their know-how available to you in complex cases.

Safety requirements

Relays with forcibly guided contacts are used in safety-oriented applications for the decoupling of different voltage potentials. These relays permit implementation of self-monitoring systems. Complying with the European standard EN50205, a relay with forcibly guided contacts consists of at least one N.C. and one N.O. contact. Break and make contact must never be closed at the same time during the entire life of the relay. In case of a fault the contact gap must be at least 0.5 mm. Additionally, the insulation values are subject to higher standards and pollution degree 2 is defined for relays with forcibly guided contacts. For the contact spring assemblies and other conducting parts in the relay it must be ensured that no short circuits or conducting connections result in case such parts should ever fracture or become loose.

Our strengths

As an acknowledged specialist in the production of relays with forcibly guided contacts ELESTA relays offers its customers a comprehensive range covering virtually all application cases. Permanent observation of the market, the participation in standardization committees and a close cooperation with suppliers, research institutions and directly with the users enable us to offer our clientele innovative products to suit their requirements in good time. With our outstanding customer support, high flexibility and on time deliveries we provide the services which buyers of such products rightly expect. Our strengths are:

- Relays for switching currents from 5mA to 16A
- 2 to 10 contacts
- Minimum coil capacities
- Minimum space requirements
- Wide coil working ranges
- High insulation values
- Customized relay variants
- RoHS-conforming and safe at higher solder process temperatures
- Reliable and rapid support
- Short delivery times

Being specialized in the production of safety relays, we protect humans and equipment alike and assume a particular responsibility for our products. Every employee of ELESTA relays GmbH is aware of this obligation in his/her daily work. In numerous recorded inspection steps from the incoming materials over the production process with 100% checking right to dispatch we guarantee the safety and product quality required for relays with forcibly guided contacts – for the benefit of man and machine!

Production mostly on the premises, sophisticated equipment and an experienced as well as highly motivated workforce ensure that our products are of highest quality. Extremely short delivery times are possible thanks to highly flexible order processing, even when special coils and customized relay variations or supplies of samples and pilot series are concerned.

It is a matter of course for us to develop products with and for our clientele. In this way we guarantee that our customers get the right products for their specific applications.

Our innovation leadership in relays with forcibly guided contacts is evident in the development, production, logistics as well as the selection of available relays and our competent application consultancy – for the benefit of our customers!

Our process-oriented management system guarantees flat structures and short decision making. Continuous improvement processes, further education, contribution to standardizations and close contact to customers and suppliers are firmly in place. „Swiss Quality“ is a reality at ELESTA relays GmbH.

CERTIFICATE

RoHS

Certificate of environmental compatibility

Compatibility with the environment is of particular importance to ELESTA relays GmbH. All materials we process, the consumables, packaging products, cleaning agents etc. we use have been selected with a view to their eco-friendliness already for many years. Careful handling of the natural resources, lowest possible energy consumption, pendulum systems for input and auxiliary materials as well as optimized recycling processes are a matter of course for us. They extend far beyond what legislation demands.

Conformity with the EU guideline 2002/95/EG of 27 January 2003 (RoHS)

Our products comply with the legal requirements according to the EU guideline 2002/95/EG dated 27 January 2003 (RoHS: Restriction of Hazardous Substances). None of our products contain any of the substances listed below:

- **Lead, mercury, cadmium, hexavalent chromium**
- **Polybromated biphenyle (PBB), polybromated diphenyle ether (PBDE)**

Soldering processes and suitability for the process

Our products are suitable for all common soldering processes based on higher temperatures. It is the user's responsibility, however, to check and confirm the suitability for the particular process in the individual case.

Application consultancy

ELESTA relays GmbH offers its customers comprehensive application consultancy also in the context of the RoHS directives and the environmental compatibility of ELESTA relays products.

REACH

The REACH regulation defines the safe production and use of chemical substances in the European Union. Being a Swiss producer we are not subject to the REACH regulation. ELESTA relays GmbH is a downstream user and as such does not produce any substances or formulations.

We procure all basic materials and formulations from which our products are made by suppliers who, if required, have either already registered or pre-registered the substances and materials. Our products are not liable to registration in the sense of REACH.

Based on the SVHC (Substances of Very High Concern) list of candidates, issued on October 29, 2008 and published by the ECHA (European Chemicals Agency) our products are not subject to any information duty in compliance with Article 33.1, i.e. our products do not contain any substances of the list of candidates. Should a future list of candidates show a substance contained in a product supplied by us, we shall duly inform you as specified in the regulation on chemicals.

ELESTA relays GmbH confirms that material and safety data sheets (relays and sockets) from its suppliers concerning the materials and substances used in its products are to hand and are made available by our suppliers.

Information of relevance to safety will of course be made available on request.

Bureau Veritas Certification hereby confirms that the management system of the above-mentioned organisation has been assessed and complies with the requirements set out in the following standards / regulations.

Standards/Regulations:

SN EN ISO 9001 : 2008

The management system comprises:

Development, production and sales of electromechanical products

Date of initial certification: **26.11.2008**

The requirements of the standards/regulations must be complied with throughout the period of validity of this certificate. This will be ensured through regular monitoring by Bureau Veritas Certification.

Date of certification: **26.11.2008** Valid until: **26.11.2011**

Bureau Veritas Certification will provide information on the validity of this certificate on request at any time. Additional information on the management system and the area of applicability should be obtained from the organisation itself.
