

EMPI INC.

EMPI INC. is proud to present to you our new 2010 New Constant Velocity Drive Axle Catalog. **EMPI** is a Prime Manufacturer and Complete Line Supplier of front wheel drive components. We manufacture each of our components to exacting specifications so you can be assured of fit, function and performance.

EMPI New Constant Velocity Drives Axles - the right part, the first time, every time.

Our Mission

Is to produce and supply the finest aftermarket automotive products by insisting on the highest standards of product quality, customer service and management excellence which meet the requirements and expectations of our customers and become the supplier of choice for a profit.

To rigorously promote teamwork in our drive for excellence, creativity and initiative, and to be able to contribute to the quality of life of our employees.

We are committed to remain the industrial leader and increase market share to strengthen the company's growth and the growth of our employees. With positive effort and participation and being the best that we can be, we will succeed.

EMPI Corporate Headquarters: Our 300,000 square foot manufacturing and distribution facility in Anaheim, California.

INTRODUCTION

EMPI's new 2010 Catalog features the **EMPI** line of over 1209 New Constant Velocity Drive Axles. This catalog lists over 2382 specific passenger car, light truck, van and SUV applications for both foreign and domestic vehicles.

All New Drive Axles

This catalog features detailed Application Listings, a Numerical Buyer's Guide, Consolidation Information, and Interchanges, all detailed with pictures. Pictures of each and every axle are shown on EMPI's web site.

EMPI is committed to being the best complete line supplier on all the product lines we manufacture.

In addition to the products being offered in this catalog, be sure to review our other product lines:

Disclaimer:

The information listed in this catalog has been compiled from reliable sources and is correct to the best of our knowledge. **EMPI** INC. cannot and does not accept any responsibility or liability for errors contained herein, or harm resulting there from. We would however, appreciate being advised of any inaccuracies that may come to your attention.

The use of recognized manufacturers & rebuilders (i.e. ARI, Cardone, CCT, Ford, GKN, NTN, Saginaw, Volkswagen, etc.) and their respective model names/numbers by **EMPI** INC. is for the sole purpose of application and interchanges, and in no way denotes their use to infer or intend a direct connection between **EMPI** INC., or it's products and those manufacturers, rebuilders, or factories.

Steel Boot Clamps

ISO/TS 16949:2002
QS 9000
ISO 9002
CERTIFIED FACTORY

All EMPI New Constant
Velocity Drive Axles are
meticulously assembled
with 100% new EMPI
produced components
throughout.

THE EMPI ADVANTAGE

THE EMPI ADVANTAGE

EMPI has over thirty years experience manufacturing drive line components that meet or exceed O.E.M. specifications. Manufactured in QS 9000 / ISO 9002 / ISO/TS16949:2002 certified facilities. This catalog represents years of technical and manufacturing expertise which has given **EMPI** the ability to offer you the broadest range of New Constant Velocity Drive Axle Coverage available in the marketplace.

EMPI's careful consolidation of many part numbers through the acquisition of the O.E.M. axles and careful evaluation by our Research and Development Department, equates to a lower inventory dollar investment to reach more application sales for you and your customers. **EMPI** is capable and willing to support you with manufacturing and assembly at our main facility based in Anaheim, CA, USA.

Combining our superior quality with industry leading technical support, customer service, quick order turnaround, and high order fill rate, **EMPI** will benefit your bottom line. Perhaps as important as eliminating potential comebacks by installing the right axle the first time.

"A Tradition Of Performance"®

NEW DRIVE AXLES

THE EMPI ADVANTAGE

Introducing **EMPI's** line of over 1209 New Constant Velocity Drive Axles. This catalog lists over 2382 specific passenger car, light truck, van, and SUV applications for both foreign and domestic vehicles. **EMPI's** New Drive Axles come packaged in our New **EMPI** Full Color, Tri-lingual (English, Spanish, French) Box. All New Drive Axles are sold per each, (1) per part number.

All New Front Drive Axles start with an "80" prefix and are listed in "Bold" type.

All New Rear Drive Axles start with a "90" prefix and are listed in "Italic" type.

100% New Drive Axles include:

- New C.V. Joints - Inner and Outer
- New C.V. Boots
- New Stainless Steel Boot Clamps
- New Retaining Clip and Hardware (where applicable)
- New Precision Machined & Heat Treated Center Shafts
- New Dust Shields installed (where applicable)
- New Axle Nut (where applicable)
- New ABS Rings installed (where applicable)
- New Inboard Bearing and/or Flange installed (where applicable)
- Precision ground Bearing Lands and Sealing Surfaces
- New High Temperature / High Pressure Moly Grease
- EMPI Heavy Duty Packaging features New Full Color Graphics, Trilingual language, and Detailed Axle Cut-Away Illustration.

EMPI the Right Axle, the First Time, Every Time!

All **EMPI** Axles are engineered for proper fit and function, but it is important to note the following!!

EMPI C.V. Joints may be of a different design than Original Equipment.

EMPI Axles, in some cases may require that the ABS Ring be removed.

EMPI May replace a Trilobal or Thermoplastic Boot with a Round C.V. Boot.

EMPI Center Bars are all of the solid design & do not have or require Dampers.

EMPI Axles/Joints may have different size threads and nuts than the O.E.

NEW DRIVE AXLE TIPS

BEFORE YOU START

NEVER diagnose a vehicle on a lift unless it is supported by the suspension. And **never turn the wheels** side to side while the vehicle is supported in this manner.

NOTE

To reduce the inventory required to cover a maximum number of applications, EMPI supplies most axles which have a with or without ABS option **WITH the ABS tone ring installed!!** In most cases this ring will not effect the installation of the axle on non-ABS vehicles. If there are any clearance issues with the ring, it may be carefully removed from the axle with a suitable tool prior to installation.

When replacing an O.E. drive axle, the unit coming off of the vehicle may not look exactly the same as the new EMPI replacement axle supplied. This section is a guide to explain some of the differences and how to verify that the new EMPI replacement axle is correct.

The important areas in Constant Velocity Drive Axle interchangeability are Overall Length, Spline Count, Seal Boss Diameters, Stub Length, and Number of mounting holes. When all of these match, the Axle will interchange correctly in most cases.

1.) The Number of Splines

Count the number of Splines on the Inboard & Outboard Joints of the new axle and compare the count with the unit coming off the vehicle. The Spline Counts must be the same for the replacement part to properly fit and function.

2.) Seal Surface Diameters

Measure both inboard and outboard seal surfaces. These measurements should be the same for the replacement part to properly fit. **Note.** If the old axle seal bosses have grooves worn into the surface, be sure to measure where the surface has not been damaged or worn.

3.) ABS Rings

If the old axle coming off the vehicle has an ABS ring installed, verify that the new axle has the correct one installed. Count the number of teeth or windows on the old axle and compare to the new axle. The design and tooth count must be the same for the ABS to function properly.

4.) Inboard Mounting

Examine the Inboard Joint method of mounting into the transmission. The Inboard Joint should have the same Clips, Bolt Holes and / or Splines.

5.) Male Stub Lengths

The Axle Joints with a Male Stub should be checked by placing the corresponding new and the old Inboard Joints against each other end to end and comparing their lengths.

The Stub Lengths should be the same in most cases. Exceptions are when the new axle's nut size changes. Then the length of the threaded portion may be different.

6.) Over All Axle Length

Overall Length of the EMPI New Axle compared to the old axle will be within 1/4 of an inch longer or shorter and still function correctly. Worn and/or broken components within the old axle can contribute to this difference. In most cases over all axle length is the compressed length. To measure the compressed length, start by placing the old axle with the Inboard Joint down on a flat surface with the Outboard Joint in the air. While holding the Outboard Joint, push down to compress the axle to it's shortest length. Be sure to keep the assembly straight. Repeat with the new axle. Some axles have a spring loaded Inboard Joint, the length of these axles is determined by the over all extended length.

7.) New Spindle Nut Size and Thread

EMPI New axles are supplied with a new Spindle Nut or Bolt where required. The Nut or Bolt Thread Size may be different than the original, but this is acceptable.

BE PREPARED

A.) Certain vehicles, Ford and Subaru especially, require specialized tools to remove the Outer Joint from the hub.

B.) If you encounter difficulty removing the Inner Joint from the transaxle, try removing the opposite side axle, then carefully using a long drift punch, tap out the other axle.

NOTE: On many vehicles extreme caution must be exercised when removing both axles at the same time. Do Not jolt the transmission or move the transmission gear selector while both axles are removed. Failure to do so may cause the side gears to move and prevent re-installation of the new axles.

C.) After removing any axle with a cir-clip on the inner spline, check carefully that all of the clip and any other metal debris has been cleaned from the transaxle.

D.) **AVOID EXCESSIVE FORCE** which may damage the transaxle.

E.) Always check the condition of the transaxle fluid. If discolored, has particle contamination, or smells burnt, it should be replaced.

F.) Before installing the new axle, check the transaxle seal for damage or excessive wear.

G.) After putting the vehicle back on the ground, but **BEFORE** test driving, **ALWAYS** check the transaxle fluid level, that the axle nuts & bolts have been properly torqued, staked or the cotter pins have been installed, and the lug nuts are tightened correctly.

H.) Test drive the vehicle to verify proper function of the new axles.

NEW DRIVE AXLE TIPS

INTERCHANGEABILITY

On EMPI's new replacement axles, the C.V. Joints may be larger or smaller in diameter, slightly different in shape ("Round" verses "Y" shaped) and still work properly on the vehicle. The Axle Bar may be slightly thinner or thicker, and will not have a damper and still work properly.

The following section will show a variety of illustrations of various units which are interchangeable with EMPI replacement axles.

Also be aware that there are footnotes in many places within the catalog. These footnotes will reference an illustration or additional text which can be critical in the determination and selection of the correct axles. Footnotes will be designated as superscript numbers preceded by the # sign within the application text. Text information will be located at the bottom of the page and information with illustrations will be located at the end of the vehicle's make section (I.E. Dodge)

Audi / Volkswagen

Axles interchange when the lengths are the same.

Late Model Audi and Volkswagen

Bolt may be 14mm or 16mm
Joints interchange when splines are the same

Buick, Cadillac, Chevrolet, Geo, GMC, Pontiac, Oldsmobile

These O.E.M. Inboard Joints will interchange when splines, seal diameter and stub length are the same.

Buick, Cadillac, Chevrolet, Geo, GMC, Pontiac, Oldsmobile (Cont'd)

General Motors Vehicles equipped with the TH-125C 3 Spd. Automatic Transmission 1979 to April of 1986. If the Inboard Joint seal boss has a sleeve on it, it will be necessary to replace the oversized transmission seal and carrier bearing assembly with a standard sized one from the dealer. This is to assure a proper axle to transmission seal and avoid leakage of fluid.

Broad Coverage

Cadillac Eldorado, Oldsmobile Toronado

NEW DRIVE AXLE TIPS

Buick, Cadillac, Chevrolet, Geo, GMC, Pontiac, Oldsmobile (Cont'd)

85-88 Chevrolet Nova, 89-92 Chevrolet / Geo Prizm

Chrysler/Dodge/Plymouth

CAUTION!!

In the case which the original inner axle joint has pulled apart, a very careful inspection must be performed to identify if the engine has shifted, if there are broken mounts, or if there has been frame damage. A worn axle will not pull apart, but the above vehicle driveline and frame conditions may cause this. New EMPI axles returned with torn boots and / or separated inner joints will be ineligible for warranty consideration.

Axles interchange when the lengths are the same.

Chrysler/Dodge/Plymouth (Cont'd)

EMPI axles will replace multiple designs of Chrysler axles, as long as the stub splines and the collapsed/extended lengths are the same.

2002-2005 Dodge Ram 1500 Axles (EMPI 80-2105)

When replacing Axles on this Vehicle the Transmission Output shaft splines **MUST** be inspected for rust or corrosion. If this condition exists the output shafts must be replaced. These items can be purchased from your Dodge Dealer. Also inspect the condition of the O-Rings and replace if necessary.

Axles returned for Inboard Spline damage or corrosion will not be eligible for warranty consideration

Ford/Mercury/Lincoln

Ford Escort/Mercury Lynx

Axles interchange when the lengths are the same.

Honda/Acura

Acura Integra ABS Rings

1990 - 1993

1994 - 2000

Round
Teeth

Square
Teeth

These Axles Do Not interchange.

NEW DRIVE AXLE TIPS

Nissan/Infiniti

These O.E.M. inboard joints interchange when stub splines are the same.

EMPI Replacement Design

Axles interchange when the lengths are the same.

Renault

Alliance/Encore

Driver side does not have inboard joint.
It is supplied with tripod and boot.

Driver Side
80-5100

Passenger Side
80-5101

Subaru

O.E.M. w/Large Inboard and Shaft

O.E.M. w/Small Inboard and Shaft

EMPI Replacement Design

Interchangeable if spline, seal diameters and overall length are the same.

Toyota

Toyota Outboard Joints with different Spline Threads will interchange when new Spindle Nut is used. New EMPI axles are supplied with a new Spindle Nut where required. The Nut & Thread Size may be different than the original, but this is acceptable.

22mm Threads

19mm Threads

Volkswagen

Tube Shaft

EMPI Solid Shaft

Axles interchange when the lengths are the same.

Notes

Many new C.V. Joints such as found on Mazda, Mitsubishi, Nissan, Subaru, Toyota etc., utilize 8 Balls instead of 6. EMPI C.V. Joints are all 6 Ball design which can replace 8 Ball design. Carefull consideration has been taken to ensure that EMPI Axles will fit the first time, everytime.

NOTES

Handling of Flat Cross-Groove Design C.V. Joints (Non-German)

Care must be exercised when handling this design C.V. Joint. Axles are shipped **WITHOUT Grease in the C.V. Joint**; therefore it must be greased prior to installation. Once the Plastic Tie (Placed on at the factory to secure C.V. Joint in transit) has been cut, carefully move the C.V. Boot back to expose the Front side the CV Joint (See Figure #1). Care must be taken so that the outer housing does not roll at an angle, try and keep the housing at the 90° angle to the center shaft. Carefully squeeze grease (1/2 the contents of the Grease Pack) between the cage and race, and between the Balls and Tracks (see Figure #2). Once this is completed, move the CV Boot back into position being careful to line up the holes in the Boot Flange with the corresponding holes in the C.V. Joint Housing. Squeeze the remaining grease from the packet between the Cage, Race and Balls on the Rear side of the CV Joint (See Figure #3)

If during the above procedure or during installation in the car a Ball drops out or the entire C.V. Joint becomes disassembled (All the Balls fall out, see figure #4) do not become alarmed, with a little patience the Joint can be reassembled.

The easiest way to reassemble is to first mark the Inner Race so that when reassembling it will go back on the same way (which end of the inner race faces the end of the shaft, and which way faces the center of the shaft). The same applies for the Outer Housing. In Most cases the Housing end facing the end of the shaft will have a recessed area for the Gasket. First Place the Inner Race inside of the Cage and begin placing the Balls inside the Cage Windows. Once this task is completed move the Inner Race upward so that the very edge of the race is in line with the Balls (Figures #5 and #6). Next gently lift the assembled Cage/Race/Ball combination and place it on the Housing (Figure # 7). The next step is critical; make sure the Race to Housing orientation is correct before proceeding. The Narrow Shoulder between the Ball Tracks on the Housing must line up with the Wide Shoulder between the Ball Tracks on the Inner Race (Figure #8) **Failure to orientate the Race to the housing will not allow the CV Joint to "Plunge" once assembled.** Next gently tap on the Cage assembly with a small hammer (Figures #9 and #10) the assembly will now begin to move towards the center of the CV Joint. When the Cage/Ball/Race assembly reaches the center of the housing the joint is now ready for installation back on the Center Shaft.

During installation in the Vehicle do not let the axle "hang" once the Inboard Joint has been secured to the companion flange. Use Wire or Rope to secure the shaft while working with the installation of the Outer End into the Spindle Hub on Front applications or Companion flange on Rear applications.

NOTES

Handling Cross-Groove Design C.V. Joints (German Design)

Care must be exercised when handling this design C.V. Joint. Axles are shipped **WITHOUT Grease in the C.V. Joint**; therefore it must be greased prior to installation. Once the Plastic Tie (Placed on at the factory to secure C.V. Joint in transit) has been cut, carefully move the C.V. Boot back to expose the Front side the CV Joint (See Figure #1). Care must be taken so that the outer housing does not roll at an angle, try and keep the housing at the 90° angle to the center shaft. Carefully squeeze grease (1/2 the contents of the Grease Pack) between the cage and race, and between the Balls and Tracks (see Figure #2). Once this is completed, move the CV Boot back into position being careful to line up the holes in the Boot Flange with the corresponding holes in the C.V. Joint Housing. Squeeze the remaining grease from the packet between the Cage, Race and Balls on the Rear side of the CV Joint (See Figure #3)

If during the above procedure or during installation in the car a Ball drops out or the entire C.V. Joint becomes disassembled (All the Balls fall out, see figure #4) do not become alarmed, with a little patience the Joint can be reassembled.

The 1st step to reassembly will be sure to make the orientation of the Outer Housing to the Inner Race is correct. When viewing Joint from the end make sure that the Narrow Shoulder between the Ball Tracks on the Housing aligns with the Wide Shoulder between the Ball Tracks on the Inner Race. (See Figure #5)

The easiest way to reassemble is to first remove the Snap Ring securing the Inner Race to the Center Bar (See Figure #6). Then Tap the Inner Race free from the Center Bar (See Figure #7). Next tip the outer housing to such a angle that it will expose Cage Window and Ball Tracks on Both Sides of the CV Joint at 180° (See Figure #8). Insert 1st ball on the front side, then the second ball on the back side (180° from the first Ball). Once the 2 balls are inserted, rotate the housing back parallel to the Inner Race. Carefully plunge the outer housing back and forth (Being careful to maintain the Outer Housing and Race parallel. See Figure #9). Repeat the process for the next 2 balls (Rotate housing to expose Window & Tracks, Top & Bottom) insert 1st Ball from the top, next ball from the bottom at 180° (see Figure #10). Repeat this step one last time to insert 5th and 6th balls. With a little practice you will find that this is really easier than it looks. Once Joint is reassembled slide the Race on the Bar & Reinstall the Snap Ring.

During installation in the Vehicle do not let the axle "Hang" once the Inboard Joint has been secured to the companion flange. Use Wire or Rope to secure the shaft while working with the installation of the Outer End into the Spindle Hub on Front applications or Companion flange on Rear applications.

NOTES / FOOTNOTES

Additional Notes

Axles supplied by **EMPI**, which have joints that are not sealed (Flat cross-groove style) or do not include the inner joint housing as is the case on some Acura's, Honda's, Isuzu's, and Saab's, are not packed with grease from **EMPI**. However, all of these **EMPI** axles are supplied with packets of the same high quality moly grease to be used to pack the joint prior to installation.

Acura/Honda/Isuzu/LUV

Saab

Audi/Volkswagen/Toyota

Care should be taken when removing new **EMPI** axles from their box and while handling the axle. Some joints do not have retaining clips to hold the joint together while it is out of the vehicle. Do not pick up the axle by the inboard or outboard joint allowing a joint to hang. If this is done, it may cause the inboard tripod joint to over extend. In some cases this will result in the tripod no longer being aligned with the roller tracks of the housing. This is not a defect! In most cases the tripod can be realigned, and the joint put back together without dis-assembling the joint, being careful not to damage the boot. If this is not successful, the large clamp can be removed and the boot carefully pulled back from the joint so the tripod can be re-aligned with the tracks then reassembled. Being sure that the boot and sealing surface on the joint is clean and free of any grease, a new clamp can be installed to re-attach the large end of the boot. (See the Tools and Components section in the rear of this catalog for additional clamps and clamp crimping tools.)

As above, Flat cross-grove style joints, common to Audi's, Volkswagen's and some Toyota's are secured from the factory with plastic ties to prevent the joint from coming apart during shipping. However, occasionally a joint may come apart. This is not a defect. With some care and patience, these too can be re-assembled.

Footnotes

- #1 Axle is same length on driver and passenger side without Inboard Joint. Many installers replace this unit leaving the Inboard Joint housing inside the transmission. (**EMPI** supplies these axles with cage, race, boot, grease, clamps and ball bearings.) (**Illustration**).
- #2 Taiwan Built - Vin #'s start with "L". Japan Built - Vin #'s start with "J". USA Built - Vin #'s start with "1" or "2".
- #3 See GM brake and suspension I.D. in front of catalog. Page 9
- #4 G.M. Outboard Joints H.D. Brakes vs. L.D. Brakes. (**Illustration**).
- #5 If Inboard Joint seal boss on original axle has a sleeve on it, See "Axle Tips" section for proper replacement procedure.
- #6 Tempo, Topaz Drive Axles, Joint I.D. (**Illustration**).
- #7 All Saab axles come without the Inboard Joint, due to the time required to remove the joint from the transmission. Installers replace these units leaving the Inboard Joint inside the transmission. (**EMPI** supplies these axles with the inner tripod, boot, clamp, and grease.) (**Illustration**).
- #8 I.B. Joint Stub Axles, Passenger side Inboard Joint is female, if axle removed has male stub, it must be reattached to new **EMPI** female Inboard Joint. It is also recommended that the seal (**EMPI** Part# 87-6719-0) be replaced. (**Illustration**).
- #9 General Motors Manual Transmission Drive Axles w/ Intermediate Shaft System. (**Illustration**).
- #10 Chrysler Intermediate Shaft System. (**Illustration**).
- #11 Trans. Code located on door tag, or on transmission.
- #12 AX4N Transmissions have 19 Oil Pan Bolts.
- #13 AX4S and AXOD Transmissions have 17 Oil Pan Bolts.
- #14 Ring Gear I.D. is located on differential housing.
- #15 Honda Accord Outboard Joint Seal Dia. (**Illustration**).
- #17 LSD's (Limited Slip Differentials) have a driver side Inboard Joint with two sets of splines going into the transmission. If there is the question of whether a vehicle has a LSD, Put the car into neutral with the front wheels raised off the ground, if you rotate one tire, and the opposite side tire rotates in the same direction it has a LSD. If the opposite side tire rotates in the opposite direction, it does not. (**Illustration**).
- #18 4 Spd. A/T has on/off switch on Shift handle.
- #19 To determine whether a vehicle is a Coupe or Hatchback, refer to the VIN #. The fifth digit is "G" for Coupes and "F" for Hatchbacks.
- #20 Bolt on Toyota Drive Axle 80-6106. (**Illustration**).
- #21 Splined GKN Drive Axle 80-6108. (**Illustration**).
- #22 Japan Built (Toyota Design) Vin # begins with "J", USA Built GKN Design) Vin # begins with "1" or "4".
- #23 Volkswagen Inboard C.V. Joint O.D. (**Illustration**).
- #24 All **EMPI** New Replacement Axles are supplied without dampers and with solid shafts.
- #26..With manual locking hubs, for auto locking hubs see service manual for correct procedure.
- #27..Axles do not require an Inboard Joint. (**Illustration**).
- #28..Interchangeable 86-89 Celica GTS Axles. (**Illustration**).
- #29 Interchangeable Axles, 88-92 Corolla, 87-88 Corolla FX Axles. (**Illustration**).
- #30..Volvo **EMPI** Replacement Axle. (**Illustration**).
- #31..Focus **EMPI** Replacement Axle. (**Illustration**).
- #32 C.V. Joint to Wheel Flange.

#8 Inboard Joint Stub Axles

Passenger Side Without Stub Installed Passenger Side With Stub Installed 87-6719-0 Seal

Passenger side Inboard Joint is female, if axle removed has male stub, it must be reattached to new EMPI female Inboard Joint. It is also recommended that the seal (EMPI Part# 87-6719-0) be replaced.

#3 See GM brake and suspension I.D. in front of catalog. Page 10

#5 If Inboard Joint seal boss on original axle has a sleeve on it, see "Axle Tips" section for proper replacement procedure.

#1 Passport Drive Axles

Axle is same length on driver and passenger side without Inboard Joint. Many installers replace this unit leaving the Inboard Joint housing inside the transmission. (EMPI supplies these axles with cage, race, boot, grease, clamps and ball bearings.)

^{#17} G20 & I30 Drive Axles

LSD Driver Side Inboard Joint

Most LSD (Limited Slip Differential) have a driver side Inboard Joint with two sets of splines going into the transmission. If there is the question of whether a vehicle has a LSD, put the car into neutral with the front wheels raised off the ground, if you rotate one tire, and the opposite side tire rotates in the same direction it has a LSD. If the opposite side tire rotates in the opposite direction, it does not.

^{#17} Altima, Maxima, Stanza Drive Axles

LSD Driver Side Inboard Joint

LSD's (Limited Slip Differentials) have a driver side Inboard Joint with two sets of splines going into the transmission. If there is the question of whether a vehicle has a LSD, put the car into neutral with the front wheels raised off the ground, if you rotate one tire, and the opposite side tire rotates in the same direction it has a LSD. If the opposite side tire rotates in the opposite direction, it does not.

PREMIUM NEW DRIVE AXLES

YEAR SPECIFICATIONS DRIVER PASS.

Saab (Continued)

#7 Most Saab axles come without the Inboard Joint, due to the time required to remove the joint from the transmission.

Installers replace these units leaving the inboard joint inside the transmission. (EMPI supplies these axles with the inner tripod, boot, clamp, and grease.)

INTERCHANGES

The following section of interchanges has been included for your convenience and are for reference only and does not represent the full offering of **EMPI's** New Constant Velocity Drive Axle line, only the correlation to our competitors part numbers. For specific application information please refer to the application section of this catalog. To review the full line, refer to the buyers guide section of this catalog. Due to our extensive research and manufacturing capabilities, we are able to consolidate multiple axles where others may require two or more to properly cover an application. In comparison, where it takes ARI 1328 part numbers **EMPI** uses only 858, for Cardone's 1378 **EMPI** uses 991, and with AAG/CCT's 1330, **EMPI** needs only 860.

EMPI includes an ABS ring on most axles that fit both ABS and non-ABS applications, when clearance requirements are not an issue. This type of consolidation reduces your investment and space requirements considerably, overall reflecting in a substantially lower acquisition cost.

Our careful consolidation of many part numbers through the acquisition of the O.E.M. axles and careful evaluation by our Research and Development Department, equates to a lower inventory dollar investment to reach more application sales for you and your customers.
