SWITCH DISCONNECTORS

Switch disconnectors LAS

Generalities

The modular switch disconnectors of LAS series allow the breaking and the disconnecting on load of equipment on low voltage at nominal current from 16 A to 125A.

Use

The switch disconnectors of LAS series are commonly used for the following purposes:

- main switch
- switch for motors
- safety switch
- disconnecter

General characteristics

- high breaking capacity (AC 22 A - AC 23 A)
- double break contacts
- high electrical and mechanical endurance
- resistant to damp heat
- IP20 degree of protection
- modular execution, basic mounting on 35 mm DIN rail and by screws, modular window 45mm

Additional poles

Fourth switched pole, solid neutral and earth pole.

Operating mechanism

Black (standard execution) or emergency direct handle padlockable in 0 position.

Handle with and without door interlock handle, black or emergency handle padlock with up to three padlocks in 0 position.

IP 65 degree of protection on door interlock handle.

Switch disconnectors LA

Generalities

LA is a range of switch disconnectors suitable for making and breaking on load and disconnecting low voltage electrical purposes:

- main switch
- switch for motors
- disconnector
- safety switch

General characteristics

- rated insulation voltage 1000V AC and 1500V DC
- 3 and 4 poles available
- high breaking capacity (AC-22, AC-23, IEC 60947-3)
- high electrical and mechanical endurance
- double break contacts
- self – cleaning contacts
- contact position positively indicated by the handle
- visibility of fixed and moving contacts by means of windows
- independent manual operation

- neutral contract makes earlier and opens later than the phase contacts
- suitable protection to prevent accidental touching of live parts
- casing in self-extinguishing (V0-UL94), low hygroscopic and high mechanical resistance isolating material
- resistant to damp heat (IEC 6068-2)
- wide range of accessories
- rotary front operation by means of: external double insulated handle with door – interlock in ON position, IP65 degree of protection; padlockable with three padlocks in OFF position
- direct handle (padlockable in OFF position on request)

Switch disconnectors fuses LAF (NV/NH)

Generalities

LAF is a range of switch disconnectors fuse suitable for making and breaking on load and disconnecting low voltage electrical circuits.

They are used for the following purposes:

- main switch
- switch for motors
- disconnector
- safety switch

They are available in 5 sizes

General characteristics

- rated insulation voltage 1000V AC and 1500 V DC
- 3-4 poles available
- high breaking capacity (AC-22, AC-23, IEC 60947-3)
- high electrical and mechanical endurance
- four break contacts per pole
- self-cleaning contacts
- both fuse terminals are not alive when the switch is in 0 position
- contact position positively indicated by the handle

- visibility of fixed and moving contacts by means of windows
- independent manual operation
- neutral contact open earlier and opens later than the phase contacts
- suitable protection to prevent accidental touching of live parts
- casing in self-extinguishing (V0-UL94), low hygroscopic and high mechanical resistance isolating material.
- resistant to damp heat (IEC 68-2)
- wide range of accessories
- rotary front operation by means of: external double insulated handle with door-interlock in ON position, IP65 degree of protection; padlockable with three padlocks in OFF position.
- direct handle (padlockable in OFF position on request)
- Conformity to standards: IEC 60947-1, IEC 60947-3, IEC 439-1, EN 60439-1, IEC 204-1,

Manual change-over switches LAS

Generalities

Change-over switches manually operated suitable for breaking and change-over of two low voltage electrical circuits. They are made by two standard switches mechanically interlocked.

Rotary front operation by means of:

- External double insulated door-interlock handle in I and II position, IP65 degree of protection
- Direct handle standard
- Standards: IEC 60947 / 1-3

Manual change-over switches LA

Generalities

Change-over manually operated switches are suitable for breaking and permutating two low voltage electrical circuits. They are made by two standard switches mechanically interlocked. The arrangement of two switches mounted one on top of the other makes this execution particularly compact and easy to connect to cables and busbars.

General characteristics

- 3 positions "1", "0" and "2"
- visibility of fixed and moving contacts by means of windows
- independent fast action operation
- double break contacts
- high breaking capacity (AC-23A IEC60947-3)
- high electrical and mechanical endurance
- resistant to damp heat (IEC 68-2)
- wide range of accessories
- rotary front operation by means of
- external double insulated handle with door-interlock in "1" and "2" position
- IP65 degree of protection; padlockable with up to three padlocks in "0" position

Motorized change-over switches LA (1-0-2)

Generalities

The three and four pole change-over switches, with motorized operation, allow remote control of change-over/breaking/disconnection under load of power circuits in low voltage systems. Motorized change-over switches are made by means of 2 switch disconnectors mechanically interlocked.

General characteristics

- automatic under-load change-over (AC22, AC23) from and to any of positions "1,0,2"
- both electrical and manual (emergency change-over)
- transfer function with direct transition from position "1" to position "2" and viceversa.
- front display of positions "1", "0", "2" is provided

- safety: locking by padlock preventing any electrical or manual operation
- external signalisation of positions "1", "0" and "2" by a clean contact (no voltage supply)
- quick operating time from pos. "1" to "2" and viceversa
- easy and fast electrical connections by means of terminal blocks of quick connection type
- power supply voltage 24V DC and 230V AC
- compact dimensions
- selection of operating logic by a micro switch for the following logic:
 - impulse (150 ms min)
 - contactor (maintained contact)
- conformity to standards: IEC 60947-1, IEC 60947-3, IEC 439-1, IEC 204-1
