Why LED?

LED solutions are receiving global recognition for their energy saving capabilities, long service life and the ability to reduce carbon emissions across a host of different sectors.

LED solutions will play a pivotal role in the future of lighting. However, when it comes to selection, how can you be sure that one system is better than another? After all, every company will tell you that theirs, understandably, is the best.

GE Lighting LEDs come from a lighting heritage that is, quite simply, unsurpassed. The company introduced LED technology to the world with the patent for the first practical, commercialised LED for indication applications in 1962. Since then, GE Lighting has pioneered the use of LED solutions and today is one of the largest LED companies in the world.

GE Lighting continues to develop high quality LED solutions and who better to rely on than those who invented the technology and developed it into the global phenomenon we see now. With over 130 years of expertise, GE Lighting has the knowledge and cutting edge LED solutions to guide you effortlessly into the future of light.

Leading the future of LED

GE is one of the largest LED systems companies in the world. Our expansive installed base includes more than 7.62 million metres of LED linear lighting with a warranty return rate of less than 0.05%.

In addition, as a trusted partner in the transportation segment, GE has more than 6 million LED signals in 24/7 operation around the globe. Further proof of our success: the Next Generation Luminaires™ Solid State Lighting Design Competition gave us the “best in class” award for Immersion® LED Display Case Lighting and a “special recognition” for GE LED Cove Lighting as a market-ready luminaire.

GE Lighting was the original innovator of the first commercial LED in 1962 and is an innovation market leader in LEDs for a variety of applications such as traffic and rail signals, signage, outdoor area lighting, and refrigerated display lighting. The company has a strong presence in emerging LED markets which include:

- Architectural lighting
- Commercial display lighting
- Residential and professional retrofit lighting
- Retail lighting
- Street lighting

Proof of our success

In the 2009 Lighting Design Award our Vio LED technology was recognised by the judges as ‘a major advance in colour stability’. GE also received ‘Best in Class’ awards in 2008 and 2009 at the Next Generation Luminaires competition sponsored by the US Department of Energy, for retail and outdoor LED products.

All LED systems are not the same

- How can you be sure that one LED system is better than another?
- What is your assurance that a given product will last as long as its manufacturer claims?
- How can you trust such an important long-term investment to a supplier without a proven record of experience?

Setting the standard

Making an informed decision on a LED system is unlike any other lighting purchase. Comparing fluorescent, incandescent or HID products to each other is easier because there are long established industry standards you can rely on but that is not so with LEDs.

GE is actively working with the IEC, ELC, CELMA, ELMAPS and ANSI, as well as third party testing laboratories like Intertek, to develop measurement efficiency and performance guidelines. In addition GE is playing an active role in the ZHAGA consortium to establish standards for LED light engine interfaces.

There are many companies offering LED products and making claims about performance and it is hard for customers to know whom or what to believe. Rest assured that every GE LED system is backed by our expertise from over 100 years in the lighting business. Every performance claim we make is supported by stringent, comprehensive testing.

GE takes reliability testing to the extreme

Rather than rely solely on test data from LED suppliers, we test the LED, sub-system and complete system at our in-house and independent laboratories around the world. Validation of our designs, components, products and processes include high-temperature, high-humidity and accelerated life testing.

For example, all of our new LED systems must undergo high-temperature testing at 60 °C for at least 10% of its rated life to help validate performance – 5,000 hours (or 7 months) of continuous testing under extreme temperatures for a product with a rated life of 50,000 hours.

To help ensure long-term performance, we continue to test our products even after initial launch. For example, the LED Area Light, launched in mid-2009, has already amassed more than 10,000 hours of reliability test data to further support our 50,000 hour life rating. Also, there is an original GE Tetra® LED product that has been in a high-temperature chamber at 60 °C for more than 7 years (70,000 hours). Even under extreme temperatures, this product still delivers more than 53% of its original light output and has exceeded both rated life and performance claims (50,000 hour life with 50% lumen maintenance).

CALiPER certified

GE will continue to invest in its reliability testing capabilities and is pleased to be the first lighting manufacturer to be CALiPER* certified as an independent photometric measurement laboratory for solid state lighting (SSL) under the DOE CALiPER* program.

* CALiPER (Commercially Available LED Product Evaluation and Reporting) is a market surveillance programme which undertakes third party testing of commercial LED products in the US. GE laboratories are certified to carry out these measurements.

"The LED Area Light, launched in mid 2009, has already amassed more than 10,000 hours of reliability test data to further support our 50,000 hour life rating."

Revolutionary

Retrofit Lamps

7

GE's innovative LED retrofit lamps offer substantial opportunities to reduce energy consumption and maintenance costs. Offering low cost of ownership, and with paybacks of less than 1 year in many professional applications, these lamps are true retrofits that enable users to achieve dramatic reductions in cost of ownership.

New era for reflectors

APPLICATIONS

Hotels

- Reception areas
- Corridors
- Bedrooms

Retail

- Cafes, Bars
- Home

Reflectors

GE's reflector LEDs are a like-for-like replacement for halogen lamps, having similar light output and beam spread, but they have many advantages.

With no UV, IR or heat in the beam they are perfect for retail displays where products would previously have been harmed by these emissions, and they use far less energy.

Features >>>	>>> Benefits
Long life up to 25,000 hours (L70)	Reduced maintenance cost
CRI >80	Excellent colour reproduction
Same size and cap types as halogen equivalents	Easy installation
Robust design	Shock and vibration resistant
No mercury	Environmentally safe
Equivalent light output to existing incandescent and halogen products	Massive energy saving with no reduction of light output

LED GU10 6.5W

LED MR16 4W

Dimmable reflectors in GU10, MR16, R63 and PAR30 types

Upgrading to LED

GE LED reflectors operate just like halogen and incandescent lamps and are a direct replacement.

Halogen 20 W
GU10 MR16

GE LED 4 W

Incandescent R50

GE LED 4 W R50

Halogen 35 W
GU10 MR16

GE LED 4.5 W

Incandescent R63

GE LED 7 W R63 WFL

Halogen 50 W
GU10 MR16

GE LED 6.5 W

Halogen PAR 30

GE LED 10 W PAR30

In shape for the future

APPLICATIONS

Extra energy savings for general lighting in the home.

Can also be used in hotels, casinos and restaurants where 24 hour lighting is needed.

Home
Guest rooms
Hotel
Offices, meeting rooms

LED GLS Retrofit Lamps

A true 40 W equivalent LED bulb, GE's Energy Smart™ GLS consumes just 9 W, provides an 80% energy saving and produces the same light output, while lasting at least 25 times as long.

The GE bulb's unique fin-like design allows it to operate differently, distributing light like a traditional 40 watt incandescent bulb while delivering excellent light output over its 25,000 hour rated life.

Energy Smart™

Features >>>

Consumes just 9 W compared to equivalent 40 W GLS
Multi-directional light output
25,000 hour rated life
Instant start
Solid state components
No mercury
Cool to touch
470 lumens

>>> Benefits

Energy-saving
Like familiar GLS lamp
25 times longer than 40 W GLS
Full light output with no delay
Durable - no fragile filament
Environmentally safe
Safe to touch
Meets 40 W incandescent equivalence criteria under latest EU legislation

Light distribution

The fins that cradle the GE Energy Smart LED bulb look cool, and they also perform a cooling function. They are connected to the LEDs inside the bulb to draw out heat,

keeping them cool to ensure a longer life and greater efficiency. The fins also keep the surface of the bulb cooler than comparable incandescent bulbs.

Light distribution

Dimmable LED GLS

Familiar shapes

APPLICATIONS

Home
Bars and Restaurants
Receptions and Lobbies
Conference rooms
Hallways

GE's LED Décor range delivers incandescent-like sparkling and diffuse light effects, making them ideal for general and decorative lighting in home and hospitality applications.

Available in clear and frosted finishes, the range encompasses candle, spherical, globe and miniature GLS shapes that can fit all existing fixtures with E14, E27 and B22 sockets.

Features >>>	>>> Benefits
2 & 2.5 W range	Very low energy consumption
Up to 80 lumen	Suitable for decorative and mood lighting
Up to 17,000 hours life	Lasts up to 17 times longer than similar decorative halogen or incandescent lamps
Robust design	Shock and vibration resistant
Instant on	Instant light - unlike compact fluorescent
Same size as incandescent or halogen equivalents	Like-for-like exchange with same visual comfort

Globe

Spherical

Miniature GLS

Candle

Designed to fit

GE LED Décor lamps are the same size as their incandescent or halogen equivalents, having been designed around the international standard outline. They are truly a like-for-like replacement, with all of the benefits that LED technology is known for:

- Extra long life
- Very low heat emission
- Mercury free - environmentally friendly

COMING SOON
LED Décor dimmable
range in 2012

Creating mood and saving energy

GE's growing family of LED retrofit lamps offers a broad range of shapes, wattages and finishes to accommodate both consumer and commercial application needs. These high-technology retrofit lighting solutions help to create ambient lighting with significant energy and cost savings.

Endless possibilities

LED Professional Lighting Solutions

GE LEDs have opened up a huge range of possibilities for lighting product designers.

They enable precise light control, and the reduced heat output compared to other light sources is also a big advantage. For a simple, pure LED light source GE's Vio™ provides the perfect answer, while the Infusion modular unit is an example of how GE provides solutions to create cutting edge innovations.

Infusion LED Module System > 19

Vio™ LED Emitters > 21

Vio™ LED Downlight Solutions > 23

Product range > 25

Upgradeable designs

APPLICATIONS

An exciting alternative for recessed and track lighting, as well as other applications such as downlights.

Public areas

- Airport lounges, hotel lobbies

Offices

- Conference rooms, lecture halls

Retail

- Supermarkets, luxury shops

Restaurants

Infusion™ LED Module System

General lighting with energy efficient, long-lasting LEDs is now as easy as changing a standard light bulb.

The GE Infusion™ LED module is a game-changing platform, designed to open up new possibilities for the use of longlasting, controllable, low maintenance LED solutions in retail, hospitality and other environments where the quality of light is critical to the customer/visitor experience. With a simple twist & lock action, the module can be easily removed and replaced, with no additional hardware necessary. Plus a selection of optical accessories are available from GE which are also tool-free to attach, for a complete lighting solution.

In addition to offering excellent energy efficiency and long life, the GE Infusion™ allows luminaires to be designed that can be upgraded to use future generations of LEDs as the technology improves, enabling users to always have the optimum energy efficient solution in their installation.

Features >>>	>>> Benefits
3 colour temperatures	Best suit to lit environment
4 module series	Lumen packages from 850 to 3500 lm
Standard range with CRI>80 and Ultra version with high CRI	Enables colour rendering as per the illumination objective
Long life, 50,000 hours	Low maintenance cost
No IR or UV radiation	Safe for people and products
Dimmable via DALI, DMX, 0-10V leading edge, trailing edge	Compatible with a range of drivers on market

Infusion LED modules with lumen packages of 850 and above are supplied without integrated optics, allowing flexibility for luminaire designers to design or use optics of their choice according to the application needs.

GE offers a range of optical attachments to interface with our Infusion LED modules. These attach using a twist and lock mechanism via an optical interface feature on the modules. This facilitates tool-free replacement and assembly. A schematic illustration of the tool-free attachment method is shown below: GE also offers the reflectors from the optical attachments as separate components.

Parts

LED Module and optic are supplied separately. It is not compulsory to buy the optic with the module.

Insert Optic

The optic is placed in the groove on the module

Twist & Lock

The optic connects to the module without use of tools.

Stable performance

APPLICATIONS

General

- Pendants, sconces

Commercial

- Task
- Display

Landscape

- Pathway, in-ground

Architectural

- Wall wash, marker

A simple, pure light source that has no boundaries for creative lighting design - the GE Vio™ High Power White LED.

By combining highly efficient 405 nm violet chips with proprietary phosphors, Vio™ LEDs enable tremendous flexibility in colour temperature and CRI. The result is a very stable, warm white colour. The light is diffused for a pleasing, uniform light that meets the high standards of lighting designers.

Colour stability over life

Since the colour change is less than 75 Kelvin over 50,000 hours, Vio™ LEDs can be used with confidence in general applications as a replacement for traditional light sources. Not only will Vio™ LEDs create the mood a lighting designer is looking for, they will maintain the mood over time.

Features >>>	>>> Benefits
Less than 75 K colour change over 50,000 hours of operation	Confidence that appearance will remain constant throughout life
Diffuse, warm white light source	Pleasing appearance similar to incandescent and halogen
Uniform colour across light emitting surface, with wide viewing angle	Can easily be used in reflector optics giving smooth beam pattern
Full spectrum phosphor with high red content	Excellent CRI and light quality
Chip on board assembly with plug and play connection	On board Tb point easy to assemble into LED systems with reliable performance

Simple efficiency

APPLICATIONS

Directional lighting

- Recessed downlights
- Track lights
- Pendants
- Display & Accent lighting

Landscape lighting

- Architectural lighting
- General illumination

Vio™ LED Downlight Solutions

23

GE's award winning Vio™ LED technology is now available in an easy to fit modular format that can be used in place of a 50 mm halogen MR16 lamp, offering excellent quality of light and substantial energy saving possibilities.

Whether it's a domestic project like an extension or a loft conversion, or a professional building like a new boutique hotel, today's modern interiors are expected to look stunning and high end, yet at the same time save energy and be maintenance-free. LED lighting technology is now revolutionising our ability to design more sustainable buildings.

Features >>>	>>> Benefits
3.6 W and 7.2 W versions	Optimised energy saving
Runs from 350 mA constant current DC supply	Compatible with a range of LED drivers
Dimensions smaller than MR16 lamp	Enables design flexibility
Vio™ quality and stability of light	Reliable operation
50,000 hour lifetime	Drastically decreases lamp maintenance cost
High colour rendering index > 80	Vibrant colours in installations
Faceted reflector	Halogen-like reflector enables precise optical control, directing the beam where it is needed
Uniform remote phosphor light source	High level of visual comfort

350 mA drivers for Vio™ LEDs

- Compact packaged drivers for reliable operation of Vio™ LED products
- Versions to run 1 x 3.6 W and 2 x 3.6 W or 1 x 7.2 W
- High efficiency and power factor
- Class II SELV equivalent

Vio™ LED Downlight Solutions are available in 3 options

3.6 W Vio™ MR16 module

3.6 W Vio™ MR16 module kit

7.2 W Vio™ assembled downlight

Packaged kit comprising Vio™ MR16 module, vented bezel, recess mounting springs, connector cable and high efficiency 350 mA driver

Notes:

[1] White modules are supplied as standard. Black modules are available on a make to order basis

[2] Lumens are 'hot lumens' measured at steady state at a T_p temperature of 65°C

[3] Rated life refers to 70% lumen maintenance (L70)

[4] Modules are rated to 50,000 hours with supporting LM-80 data. Life testing continues with a view to further upgrades in future

[5] Even higher efficacies can be achieved if modules are run at drive currents lower than the rated value. GE is happy to advise on available permutations to suit particular project requirements

Retail therapy

LED Retail Solutions

27

GE LEDs provide an excellent light source for the retail environment. Not only do they enable precise control of light but they also have very low heat emissions, reducing the cost of air conditioning and protecting heat-sensitive displays.

IMMERSSION® LED Refrigerated Display Lighting

IMMERSSION® vertical
(RV40)

IMMERSSION® LED Refrigerated Display Lighting from GE has changed the way people see refrigerated displays.

Standard fluorescent lighting will flood a display case with broad and diffuse light which can create shadows, light spillage and glare. Unlike fluorescent, dedicated GE LED systems distribute light evenly on the shelves and throughout the case. Cabinets achieve higher average illuminance and therefore become much more eye-catching. At the same time, IMMERSSION® allows retailers to dramatically bring down operating costs and energy consumption.

These products comply with GE's Ecomagination initiative, ensuring that light fittings fulfil high performance claims without containing any mercury, lead or glass. Long life reduces material waste. Consequently it makes handling and recycling less of a concern.

Lightbars can be easily incorporated into new vertical/horizontal cases or retrofitted into existing ones.

Features >>>	>>> Benefits
Unique optic design	Brighter and more uniform lighting across package facings
3000, 3500, 4100 and 5000 K CCT	Multiple colour temperatures to create the perfect look for every refrigerated area
Many vertical and horizontal lightbar sizes	Fit into a variety of chillers and freezers
Low wattage and heat	Dramatic energy savings and less CO ₂ emission.
50,000 hour lifetime and ongoing performance	No material waste, significant maintenance costs reduction. Reliable LEDs, absolutely not affected by cold temperature or multiple "turn on/off"
No IR or UV emissions	Optimal selling environment for food merchandise

Immersion RV40 Wattage Savings

5-door case example
(1.5m lightbars)

*Compressor savings are dependent on case temperature and design.

LED Display Case Lighting System

The GE LED Display Case Lighting System brings glass cases to life. It creates a high ambient light level uniformly throughout the case, yet still delivers the all important sparkle thanks to unique optics. Combined with the tangible benefits of long life, energy saving and guaranteed reliability, this system is a retail revolution.

Light where you need it

Traditional lighting technologies direct the light only to certain areas of the display case, creating undesirable shadows, light spillage and glare. GE's LED system offers significant improvements on these conventional systems.

Features >>>	>>> Benefits
Unique reflector optics	Merchandise sparkles, with high level of uniform light inside case
Directional LED light sources	Spill light reduced, giving high application efficacy
Highly efficient LEDs	Allows up to 80% energy saving compared to low voltage halogen lamps
3500 K and 4200 K CCT	Perfect colour temperatures to show off valuable merchandise
50,000 hour lifetime	Over 10 years of reliable performance in retail environment

Light patterns of GE LED Display vs. Fluorescent

The unique optics of the Display Case Lighting System direct rays of light to create sparkling merchandise, allowing it to stand out against a high ambient background light, unlike fluorescent which can leave displays flat.

Cost of ownership over useful life of LED system

In this example, a single 25.9 W LED Display Case unit is used instead of 6 halogen 20 W MR11 lamps in a new jewellery display case. The benefits are clear:

- 81% saving in energy consumption and CO₂ emissions
- 12 year life of the LED system eliminates lamp replacement costs
- 64% reduction in total cost of ownership over LED useful lifetime
- 2.4 year payback

Assumptions

Energy cost of €0.10 per kWh. 0.536 kg CO₂ emitted per kWh (European average from Eco-Invent). 4000 operational hours per year. Halogen fixture cost of €10, lamp cost of €3. NOTE theoretical 'typical' example only. All applications will vary.

Accent and task

Tetra[®] AL10

33

Combining an industry-leading CRI of 93 with excellent energy efficiency of 47 LPW and 50,000 hours rated life, Tetra[®] AL10 undershelf lighting shows fashion, cosmetics and other retail shelf displays in the best possible light.

Versatile optics, lengths and mountings of AL10 mean it can also suit many alternative indoor and architectural applications.

Features >>>

Slimline and low weight

Exceptional CRI of 93

2700, 3000 and 4000 K CCT

60°, 90° and 120° optics

High light level and efficacy

Only 15 W per metre system

50,000 hour lifetime and ongoing performance

>>> Benefits

Easy and discrete installation

Brilliant, colourful displays

Enables creation of a suitable lighting environment for items being displayed

Optimal illuminance with brilliant or soft lighting effects throughout the shelves

Attractive visual appeal which promotes sales

Low energy consumption

Significant maintenance cost reduction

Defining shapes

Architecture Solutions

39

GE believes that environmental responsibility and beautiful architectural design can exist simultaneously.

GE's architectural LED systems give lighting designers all the creative flexibility they could wish for, and at the same time offer enormous savings in energy use. LEDs also ensure consistent long term performance.

Tetra® PowerGrid

41

Tetra PowerGrid is a modular, long-life, energy efficient LED system that replaces fluorescent light sources for applications that require broad and uniform lighting.

With several modules assembled on a robust strip, this GE Lighting solution allows high performance and steady illumination to emphasise backlit areas.

Features >>>

6 LEDs per module, strip set up

Robust and overmolded design

50,000 hour lifetime and ongoing performance

120° large viewing angle

2700, 3000, 3500, 4000, 5000 and 6500 K CCT

High efficiency

No lead, mercury or glass

>>> Benefits

Enables modular, quick and easy installation

Impact resistant

Decreases maintenance costs

Ensures optimal illuminance throughout the backlit area

Wide range of colour temperatures available to fit all lighting environments

Up to 64% more efficient than fluorescent

Eco-friendly

Shapely curves

APPLICATIONS

Border lighting
Interior art
Cove
Accent lighting

Tetra® Contour is the modern light source designed to hug and highlight architectural shapes perfectly.

This system is comprised of a flexible LED light engine and a rigid, optically diffused light guide. It can be heat formed to fit a wide variety of applications. With multiple colours to choose from, architects can mix-n-match components to create bold designs and attractive accent lighting without the typical worries of working with fragile neon glass.

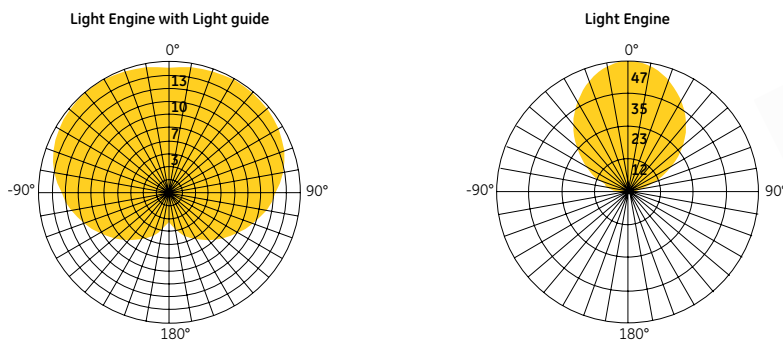

Features >>>

High efficiency
2700, 3000, 3500, 4000, 5000 and 6500 K CCT
Red, Green, Blue colours
Entirely flexible light engine
Robust & overmolded design
Extra large viewing angle: 330° with light guide
50,000 hour lifetime and ongoing performance
IP66 rated
No lead, mercury or glass

>>> Benefits

Up to 40% more efficient than neon
Wide range of colour temperatures available to fit all lighting environments
For decorative and entertaining purposes
Fits into narrow spaces and complex curves
Impact resistant
Outstanding visual appeal
Decreases maintenance costs
LED light engine combined with its light guide can be used in dry, damp or wet locations
Eco-Friendly

Candela (Cd) measurements taken at 6500 K

Huge visual punch

APPLICATIONS

Border lighting
Interior art
Cove
Accent lighting

LED Tetra® miniMAX

45

Tetra® miniMAX is a low profile LED system that combines high-brightness with OptiLens™, a patent-pending optical lens that distributes brilliant and uniform light in a wide 155 degree angle.

Therefore this unique fixture delivers a huge visual punch in small or shallow spaces. With several modules assembled on a flexible string, designers can fulfil a large number of architectural needs.

Features >>>

- Up to 40% more energy
- 2 LEDs per module
- Wide range of white and RGB colours
- Large viewing angle: 155°
- Robust & overmolded design
- Entirely flexible light engine
- Contains no lead, mercury or glass
- Long rated life of 50,000 hours

>>> Benefits

- Efficient than neon
- Flexible system
- For decorative purposes
- Bright uniform light distribution
- Impact resistant
- Fits into narrow spaces and complex curves
- RoHS compliant
- Decreases maintenance costs

Dimensions (mm)

Candela (Cd) measurements taken at 6500K.

Long lasting style

APPLICATIONS

Casinos
Hotels
Resorts
Offices
Shopping centres
Corniche areas

LED Cove Lighting

GE's LED Cove system is renowned for its ease of installation, exceptional efficacy and long life. It solves most of the problems associated with architectural cove lighting.

This system has been specially designed for illumination of long runs. Each LED fixture consumes just 6.5 watts and delivers high quality white light at outstanding efficiency - up to 49 lumens per watt. LED Cove is powered directly from line voltage thanks to its integral electronics.

Because LEDs are subject to very little loss of output, areas stay uniformly lit throughout the life of an installation, with no dark spots or shadows caused by premature lamp failure.

Features >>>	>>> Benefits
High efficiency	7 times more efficient than neon
50,000 hour lifetime and ongoing performance	Decrease maintenance costs
30 cm long fixtures and flexible connectors	Allow lighting around curves and corners
Up to 330 units connected to a single main outlet	Fast and hassle-free installation
Dimmable system with electronic low voltage reverse phase control dimmer	No additional components are needed, thus saving installation cost
Mounting tracks in 3 different positions	Controls light direction for maximum versatility

Sustainable efficiency

Outdoor

GE's LED technology has many advantages for outdoor lighting, providing 50,000 hours rated life and greatly reducing energy consumption.

This results in major reductions on running costs. LED technology also delivers fittings that can be designed with improved photometry and excellent light quality, giving lighting designers far more control over their installations. The superior photometry of LED fittings also means less light spillage into areas where it is not wanted.

LED Area Lighter

The GE LED Area Lighter is perfect for site, area and general lighting. It utilises an advanced LED optical system providing uniformity, improved vertical light distribution, reduced off-site and on-site glare and effective security light levels.

It combines strength with reliability and incorporates all the features expected of a new generation of luminaires. Optimal photometric performance is achieved thanks to LED technology, minimising light pollution.

Features >>>

50,000 hours rated life (L85) light engine enclosure

85% lumen maintenance at 50,000 hours

Increased output efficiency and instant-on

Improved photometry

Increased CRI (70) and higher colour temperature (5700 K)

RoHS compliance

Solid state light source. Robust design, excellent vibration resistance

Operation in cold temperatures

High degree of ingress protection

Die-cast aluminium IP65 housing

85% lumen maintenance at 50,000 hours

Increased output efficiency and instant-on

Modular design that provides 34 photometric combinations, in two colour temperatures - 4000K and 5700K (CRI 70)

Solid state light source. Excellent vibration resistance

Integral dimmable analogue driver

>>> Benefits

10-12 years of operation before replacement

Consistent light output over life

30-60% reduced energy consumption

Uniform light with good visibility

Security aid - objects can be correctly identified

Reduced waste disposal

Durable and long lasting

Reliable light level maintenance with temperature gradients. Also enables cold temperature operation

Long life & low maintenance

Robust design

Consistent light output over life

30-60% reduced energy consumption

Security aid - objects can be correctly identified

Durable and long lasting

Saves energy costs

46 different luminaires

The unique modular construction of the new LED Area Lighter enables it to be supplied in 46 different configurations of optics and light sources to cover every area lighting application.

Street lighting

Iberia LED is part of GE's commitment to provide lighting products that are both energy efficient and effective. With a stylish design and a wide range of different mounting options, Iberia LED is a versatile luminaire suitable for architectural and urban environments, as well as roadway lighting.

In wattages up to 90 W, it is available with symmetrical and asymmetrical distribution. Coupled with the other options that are available, this makes Iberia LED a highly versatile luminaire for amenity lighting, pedestrian areas and squares.

LED Tunnel

59

The perfect combination of aesthetics and functionality, GE's LED Tunnel luminaire is ideal for efficient lighting of low speed tunnels as well as underpasses, parking garages and industrial areas.

The luminaire helps to create a safe environment for traffic, with white light for improved visibility and comfort, as well as providing an outstanding six year, 24/7 life.

Thanks to the advanced LED optical systems the fixture provides high uniformity and improved vertical light distribution.

LED Floodlight

61

GE's LED Floodlight uses LED technology and specialised optical designs to offer a truly flexible range, with minimal energy consumption, for use in creative architectural lighting, area floodlighting and sign illumination.

The LED Floodlight delivers light exactly where it is required – uniform lighting with no hot spots and with improved lighting of upper areas of buildings. The optical assembly is hermetically sealed, providing IP65 protection.

Features >>>

>>> Benefits

Just 90 W system consumption

High light output, low energy

Three colour temperatures - 3000, 4300 and 6000 K

Helps to enhance a building's exterior

5 different optical versions

The right solution for a big range of applications

Advanced LED optical system

Maximise the utilisation of light onto the target area

Three mounting versions

Flexible installation options

Dimensions (mm)

Choice of optics

Narrow Spot NEMA	(1x1)
Medium Flood NEMA	(5x5)
Wide Flood NEMA	(6x5)
Poster NEMA	(6x5)
Bulletin NEMA	(5x4)

Choice of five different optical versions, all with a maximum system consumption of 90 W.

The Poster and Bulletin distributions are specifically designed for sign lighting applications - with the luminaire facing the vertical plane of the sign.

4300 K narrow spot

3000 K medium flood

4300 K medium flood

4300 K wide flood

4300 K poster

4300 K bulletin

The future is LED

APPLICATIONS

- Site lighting
- Area lighting
- General lighting
 - Retail
 - Street lighting
 - Commercial lighting

LED Road R250 luminaire

The new LED Road R250 luminaire features an advanced LED optical system that provides improved horizontal and vertical uniformity, reduced glare and improved lighting control compared with traditional metal halide lighting systems.

It provides a 30-50% reduction in system energy consumption and an estimated service life of more than 10 years (50,000 hour rated life), which means low maintenance. Reduced glare improves safety and visual comfort.

- High efficiency to meet rigorous photometric requirements
- System rating 50,000 hours L80 to reduce maintenance
- White light with desirable colour temperature 6000K and 4000K with CRI 70 for visual comfort
- **Integral dimmable analogue driver for remote monitoring and control**
- IP65 for both optical and gear compartment
- System consumption from 39W to 237W (scalable every 20W)
- Meets 2G vibration standards
