Brake Pad Technology of Champions

Overview

We are excited to announce the creation of the Hawk Performance Products Group. In an effort to broaden our mission of serving the performance products markets, we look forward to leveraging the power of our brands in order to meet serious performance minded customers' expectations of new products, unrivaled performance, unique styles and overall value.

HAWK PERFORMANCE: Hawk Performance, a premium performance brand of Carlisle Brake & Friction, has been a supplier of high performance motorsports brake pads to the performance street and motorsports markets since 1990. Hawk Performance is the official brake pad of SCCA, NASA, Richard Petty Driving Experience, Playboy MX-5 Cup, Skip Barber Racing School and Ron Fellows Performance Driving School.

CRAGAR: Cragar Wheels, an icon of the American muscle car scene, is best known for the Cragar S/S and other popular hot rod and muscle car performance wheels. Cragar is the powerhouse American wheel brand introduced in the sixties alongside the classic muscle cars of that era.

BLACK ROCK: The Black Rock Wheel Collection is a function-forward line of outdoor and off-road wheels, ATV wheels and most recently, a line of aluminum Toy Hauler sport trailer wheels. Offering steel and aluminum styles for the aftermarket truck, SUV, ATV and Jeep enthusiast market, Black Rock features rugged designs and the latest color finishes. Black Rock is the leading choice for outdoor aftermarket enthusiasts.

Superior Technology...

AEROSPACE

Original Equipment Friction Supplier.
Products: Brake system friction materials.

MINING

Original Equipment and Aftermarket Brake and Friction Systems Supplier. Products: Wet Brake Friction Discs, Disc Brake Pads, Dry Caliper Service Brakes, Park Brakes, Hydraulic Actuation, Manifolds, Charge Valves, Clutch Discs, Transmission Discs.

CONSTRUCTION

Original Equipment and Aftermarket Brake and Friction Systems Supplier. Products: Wet Brake Friction Discs, Disc Brake Pads, Dry Caliper Service Brakes, Drum Brakes, Park Brakes, Hydraulic Actuation, Clutch Discs, Transmission Discs.

AGRICULTURE

Original Equipment and Aftermarket Brake and Friction Systems Supplier. Products: Wet Brake Friction Discs, Hydraulic Actuation, Disc Brake Pads, Dry Caliper Service Brakes, Ball on Ramp Brakes, Drum Brakes, Clutch Discs, Transmission Discs

Military (Aircraft)

Original Equipment Friction Supplier.
Products: Brake system and motion control friction materials.

...Exceptional Products

Military (Land Vehicles)

Original Equipment and Aftermarket Brake and Friction Systems Supplier. Products: Wet Brake Friction Discs, Disc Brake Pads, Combination Service/Park Brakes, Dry Caliper Service Brakes, Drum Brakes, Park Brakes, Hydraulic Actuation, Transmission Discs, Clutch Discs

POWERSPORTS (Motorcycle, ATV & Snowmobile)

Original Equipment & Aftermarket Friction Supplier.
Products: Friction materials for disc brakes.

MOTORSPORTS

Original Equipment and Aftermarket Brake and Friction Systems Supplier.
Products: Friction materials for brake & clutch.

ON-HIGHWAY TRUCK

Original Equipment and Aftermarket Brake and Friction Systems Supplier. Products: Clutch Discs and Buttons, Block Friction, Transmission Discs

RENEWABLE ENERGY

Original Equipment and Aftermarket Brake and Friction Systems Supplier. Products: Yaw Brakes, Rotor Brakes, Organic and Sintered Friction, Hydraulic Power Units, KW Class Mechanical and Hydraulic Brakes

HAWK PERFORMANCE...BRAKE PAD TECHNOLOGY OF CHAMPIONS.

Hawk Performance has dominated Motorsports braking for over two decades, offering highly engineered friction products for nearly every type of racing. The key to our success has been, and continues to be, our passion to develop and supply leading-edge product technologies and maintain our position as the global market leader.

Autocross/Club Racing/Time Attack

This diverse group of Motorsports enthusiast requires a brake pad product that is street worthy, yet maintains many of the high temperature and elevated coefficient of friction attributes of a pure race pad. Hawk Performance is proud to be the only brake supplier that offers a true intermediate brake product (HP Plus compound) that can transition between a race and street environment.

Hawk Performance offers over 10 different application-specific compounds designed to meet the needs of today's race teams. We also offer the largest selection of pad shapes that fit both OE and purpose-built racing calipers.

Road Racing/Touring

Hawk Performance, the Official Brake Product of the SCCA and NASA, has long been the industry brake pad leader in Road Racing. A prime example of this fact has been the SCCA national runoffs. We dominated the field resulting in the greatest number of podium finishes and championships—all by a significant margin—for the past five years!

Pavement Circle Track

This is where Hawk Performance first entered the Motorsports market back in 1990. Our history of Short Track, Intermediate and Super Speedway wins is undeniable. The fact is our products truly outperform the competition in this high-temperature, brutal braking environment. From local Short Tracks to NASCAR, Hawk Performance is a proven champion.

Drag

At Hawk Performance, we understand the unique brake pad requirements for Drag racing. Our products provide the high cold-static coefficient of friction to hold the car on the line and the high-dynamic coefficient friction to stop the car at the finish. More importantly, our products can withstand the sudden burst of energy without glazing.

Off-Road Racing

Hawk Performance has been the product of choice for top teams in TORC, SCORE and LOORRS Off-Road racing. The combination of exceptional stopping power, elevated fade resistance, extended pad life and superior bond strength makes our products ideal for this abusive environment.

Dirt Circle Track

From IMCA to the Lucas Oil series, Hawk Performance has been the brake pad supplier of championship teams for over a decade. Our products provide superior performance for both Open Wheel and Late Model stock cars. Get dirty and stop fast with Hawk.

Formula

Hawk Performance offers a wide variety of brake compounds with features designed to exceed the demanding environments found in Open Wheel Formula racing.

Rally Racing

The varied terrain and conditions in Rally racing create a unique and harsh environment for brake products. The transitions between steep downhill trails in the dirt to forging water to meeting the pavement and ascending through switchbacks require a versatile and progressive brake pad. That's why championship teams specify Hawk Performance... the first and best Rally brake pad solution.

"Following a number of track tests, the Ron Fellows Performance Driving School at Spring Mountain Motor Resort & Country Club selected HAWK Performance brake materials for their excellent stopping power and overall durability"

- Ron Fellows

4 time Le Mans champion. 19 Trans-Am Series races, 2 Craftsman Truck Series races, 4-time recipient of the ALMS Most Popular Driver Award, 2011 Inductee to the Corvette Hall of Fame

"Ever since I started using Hawk Performance Brake pads my braking power has increased an incredible amount and the amount of wear has decreased!"

- Casey Currie

Driver of the
Monster Energy #2 Pro Lite

"There is not much out there that will stop Grave Digger but the thing we count on stopping it is Hawk Brakes!"

- Dennis Anderson

Grave Digger
USHRA Monster Jam

"We switched to Hawk Performance for the 2011 season and I couldn't be happier. The consistency lap after lap is staggering and has given us the edge and braking confidence we needed to go after the championship. Superior braking combined with lasting durability fuel our 2011 Championship season, Hawk Performance exceeded our expectations."

- Paul Brown

Tiger Racing
2011 Pirelli World Challenge GTS Champion

"With a 3400 lb, 900 HP stock car, having great stopping power is of the upmost importance. That's why at Kimmel Racing, we rely on Hawk Performance brake parts to get the job done."

- Frank and Bill Kimmel

9 Time ARCA Champion

"The one & only brake pad trusted on WORLD Racings' record setting Unlimited Time Attack race cars!"

-Chris Rado

WORLD Racing Inc.

Superior Street Products By Design

Hawk Performance understands that brake pads are critical components that directly affect vehicle handling, safety and driver confidence. That's why our products are engineered to meet and exceed the braking demands of today's severe-duty & high

performance vehicle applications. Each Hawk Performance brand product incorporates advanced engineering design, world-class friction technology and premium-quality raw materials.

POWDER COAT & ZINC DICHROMATE PLATING

- Hawk's dual layer outer shell offers superior corrosion resistance and smooth brake engagement.
- Each backing plate is first coated with zinc dichromate. The finished part is later sealed with an Aerospace-grade, high-temperature, electrostatic powder coat.

FRICTION MATERIAL

- Hawk Performance's world-class friction formulations deliver superior stopping power and durability for any high performance or severe-duty application.

SURFACE PREPARATION

- Diamond ground for exceptional surface conditioning and flatness.

SLOTTED FRICTION

- Adds friction flexibility to relieve stress.
- Aids in the removal of friction debris.

MECHANICAL RETENTION SYSTEM

- Hawk's mechanical bond/retention system features hundreds of small extruded hooks that are molded directly into the friction material. In terms of bond and shear strength, there is no better product.

BACKING LAYER

- Hawk incorporates a special backing material at the bond line that creates a micro heat shield and optimizes bond strength.

STEEL BACKING PLATE

- Engineered to meet Original Equipment design for fitment.
- Hawk's mono-block backing plate design increases flexural strength, and provides superior braking engagement.

HOT BOND SHIM

- Hawk's advance engineered shims feature a single layer of steel with a high-temperature rubber coating. Each shim is designed to dampen noise and hot bonded to eliminate delamination.

PAD CHAMFER

- Engineered to eliminate noise and vibration.
- Improves brake engagement quality.

Hawk—The Solution for Better Braking Performance

Whether you drive in spirited fashion through canyon switchbacks or pull 20,000 lbs over 4,000-foot summits, Hawk Performance has engineered the right pad friction compound for your street performance goals. Using a properly performing brake system, you'll enjoy the peace of mind in knowing that your vehicle will safely stop each and every time.

Selecting the right product for your specific car or truck is critical for performance and safety. The graphs to the right illustrate the performance ratings of our street products. Each graph represents a vehicle group and the product rating for the following key characteristics.

- Stopping Power
- Rotor & Pad Wear
- Noise
- Dust

The Hawk Advantage:

- 20-40% more stopping power than stock pads
- Quick warm-up
- Strong, balanced initial bite
- Superior fade resistance
- Low dust properties
- Rotor friendly—will not shorten rotor life
- Outlast stock brake pads
- Lifetime warranty

Reference pages 10 to 13 for complete street product line descriptions. For make, model and year applications guide turn to page 23. If you have purchased a conversion brake kit or non-OE caliper, use our "specialty caliper guide" on page 126.

Do You Race?

Hawk Performance has over ten application-specific race pad compounds for practically any form of Motorsports. Please refer to page 6 for an introduction to our comprehensive line of Motorsports products & applications.

Hawk Performance Brake Pads Hawk Pad Shape Insert Compound Code Overall Thickness (in inches)

**HPS Brake Pad Key Features:**

- Increased stopping power
- High friction/torque hot or cold
- Gentle on rotors
- Extended pad life
- Low dust
- Virtually noise-free
- Ideal for import and domestic automobiles

HPS-HIGH PERFORMANCE STREET

When it comes to performance braking for street vehicles, there is no equal.

Superior Stopping Power For The Street

HPS - (High Performance Street) disc brake pads are world-renowned for increasing stopping power on your street legal vehicle. Hawk Performance's engineers developed the HPS compound by blending the safety and quality aspects of Aerospace design with braking technology derived from Motorsports efforts. The result is a unique Ferro-Carbon brake compound that delivers significant advantages of increased stopping power, extended pad life, extended rotor life and low dust properties for street applications.

Our high performance street compound offers a higher coefficient of friction over stock brake pads and can provide you 20-40% more stopping power, with higher resistance to brake fade than standard replacement pads.

All Hawk Performance street brake pads provide a limited lifetime warranty, ensuring products to be free of defects from manufacturer's workmanship and materials. Please see page 229 for complete warranty information.

Important Installation Instructions

All brake pads require a burnishing or bedding-in procedure in order to achieve optimal performance and durability. During the bedding-in process the pad conforms to the rotor surface and generates an important transfer film. Prior to installation, make sure the brake system is free and clear of debris, brake fluid is replaced and all brake components are properly installed and in good working order. See the FAQ section on page 228 for more information on proper brake pad bedding procedure.

Ideal for import & domestic automobiles.

Results based on A04D Dyno tests using D52 automotive platform.
Actual on-vehicle performance may vary.

Performance Ceramic Brake Pad Key Features:

- Extremely quiet—engineered to reduce brake NVH (Noise, Vibration and Harshness)
- Increased stopping power
- Increased rotor life
- Extended pad life
- Ultra-low dust
- Stable friction output
- Ideal for import and domestic sports cars and luxury cars, sport trucks, vans and SUVs with light towing and hauling duty

PERFORMANCE CERAMIC-LUXURY & TOURING

Quiet, clean and quick stopping Performance Ceramic is better than standard replacement ceramic brake pads.

Quiet, Clean Performance

Hawk understands the demands of today's ceramic brake pad users, and specifically formulated our ceramic composite material to meet the ultra-low dust, low noise performance of OE ceramic pads. The advantage of our performance ceramic compound is that we don't sacrifice stopping power in order to achieve the traditional ceramic pad attributes. Additionally, our ceramic product provides a linear friction profile which allows your ABS system to operate more effectively.

Important Installation Instructions

All brake pads require a burnishing or bedding-in procedure in order to achieve optimal performance and durability. During the bedding-in process the pad conforms to the rotor surface and generates an important transfer film. Prior to installation, make sure the brake system is free and clear of debris, brake fluid is replaced and all brake components are properly installed and in good working order. See the FAQ section on page 228 for more information on proper brake pad bedding procedure.

Results based on A04D Dyno tests using D52 automotive platform.
Actual on-vehicle performance may vary.

**Recommended for import & domestic automobiles,
luxury SUVs, sport trucks & vans.**

LTS Brake Pad Key Features:

- Designed for large brake systems found on full-size trucks
- Engineered using technology from fleet & Military applications
- Ferro-Carbon friction material delivers more braking power and fade resistance than OE pads
- Low dust
- Excellent pad and rotor life
- Virtually noise-free
- Ideal for import and domestic full-size trucks, vans and SUVs (1/2 ton) with moderate towing and hauling duty

LTS-LIGHT TRUCK & SUV

Stop putting car brakes on your truck. Hawk's LTS compound is specifically formulated for large brake systems found on full-size trucks and SUVs.

Engineered By Truck Brake Pad Experts

At Hawk Performance, we understand that traditional car brake pad technology just doesn't cut it on today's trucks. This is especially true if you haul heavy payloads or trailers. Install our LTS brake compound and dramatically improve your truck's stopping power and fade resistance. Additionally, Hawk Performance LTS compound will outlast the competition in terms of rotor and pad wear.

What Makes Us The Truck Experts?

For over forty years, we have developed and supplied friction solutions for some of the largest trucks on the planet. Our products are utilized by both OE and aftermarket companies servicing the mining, construction, military and commercial truck markets. We have utilized this technology and combined it with Aerospace design quality to develop the ultimate on-highway truck and SUV specific friction material.

All Hawk Performance street brake pads provide a limited lifetime warranty, ensuring products to be free of defects from manufacturer's workmanship and materials. Please see page 229 for complete warranty information.

Important Installation Instructions

All brake pads require a burnishing or bedding-in procedure in order to achieve optimal performance and durability. During the bedding-in process the pad conforms to the rotor surface and generates an important transfer film. Prior to installation, make sure the brake system is free and clear of debris, brake fluid is replaced and all brake components are properly installed and in good working order. See the FAQ section on page 228 for more information on proper brake pad bedding procedure.

Ideal for import and domestic full-size trucks, SUVs and vans with moderate towing and hauling duty.

Results based on A04D Dyno tests using D655 1 ton truck platform.
Actual on-vehicle performance may vary.

SUPERDUTY-SEVERE-DUTY TRUCK

For serious towing/hauling and commercial truck fleets.

SuperDuty Brake Pad Key Features:

- Engineered from technology used in heavy-duty on/off-highway and Military applications
- Extremely high coefficient of friction and fade resistance
- Recommended for professional fleets (greater than 1 ton) and light trucks towing excessive payloads

Unequaled For Severe Duty Use

Hawk Performance SuperDuty brake pads utilize our OE and aftermarket severe-duty friction technology. This product has been engineered for class 2 and higher on-highway commercial trucks. This unique Ferro-Carbon material delivers extremely high fade resistance, with superior high temperature rotor and brake pad wear. **This product is not recommended for personal or recreational trucks and SUVs.**

Important Installation Instructions

See page 228 for proper brake pad bedding procedures.

**HP-PLUS-AUTOCROSS & RACING**

For import and domestic street cars that compete in Autocross, Solo and Track Day competition.

HP Plus Brake Pad Key Features:

- Extremely high friction output
- Extremely high fade resistance

The Ultimate Double Duty Friction Compound

Hawk's HP Plus race compound can take the heat of the track, and get you home safely without having to change back to street brake pads. HP Plus was developed and manufactured for sport driving in Track Day applications. This friction formulation offers lower wear rates and higher torque values than other competitive materials.

WARNING! Due to the dramatic friction levels produced by this product to achieve "race-level" braking, rotor wear, noise, dust and pad life may be affected. All Hawk Performance HP Plus/Autocross brake pads provide a limited lifetime warranty, ensuring products to be free of defects from manufacturer's workmanship and materials. Please see page 229 for complete warranty information.

Important Installation Instructions

See page 230 for proper HP Plus brake pad bedding procedures.

Leading Competitor

Quiet Slot™

Hawk Performance® Quiet Slot™ Rotors

KEY FEATURES:

METALLURGY: Quiet Slot™ rotors are cast from a proprietary formulation of premium alloys producing a superior performance street product.

- Noise dampening steel formulation.
- Long grain carbon iron for maximum thermal stability.
- Molybdenum additive for high temperature strength and thermal crack resistance.
- Unique alloy blend provides exceptional rotor life and durability.

DESIGN: Quiet Slot™ rotors combines the look, feel and durability of a true performance rotor with the fitment and convenience of OE design.

- Performance design – Direct OE replacement.
- Unidirectional vanes eliminate the need for left and right side rotors.
- Optimal rotor vane and wall thickness improves structural strength, noise dampening and heat capacity.

Note: Heat cracking and rotor warpage are inherent risks with cross drilled rotors.

- OE style vane design combined with increased heat capacity dramatically improves brake pad and rotor life.

QUIET SLOTS: Hawk Performance® Quiet Slot™ rotors feature a unique slot design specifically engineered to improve your car's braking performance and driver comfort.

- Increases initial bite.
- Improves wet weather brake performance.
- Effectively removes gas and wear debris.

Note: Cross drilled & dimpled and heavily slotted rotors accelerate pad wear generating excessive brake dust and premature pad wear.

- When the brakes are not engaged, the Quiet Slot™ rotor vane and surface slot design effectively cuts through the surrounding air flow virtually eliminating the “whirling” noise typically encountered with cross drilled or heavily slotted rotors.
- Visual wear indicator. Rotors should be replaced when slots are worn down and no longer visible.
- Optimizes overall brake performance. **Note:** Cross drilled, heavily slotted and dimpled rotors reduce the contact area of the rotor with the brake pad. This environment reduces the effectiveness of the brake pad, can cause damage to the desired transfer film and increase rotor surface temperatures.

Slotted vs. Cross-Drilled & Dimpled Rotors

Maintains 98%
of rotor contact surface

Maintains 85%-95%
of rotor contact surface

Maintains 80%-90%
of rotor contact surface

SURFACE FINISH:

- Swirl ground surface for improved brake pad bed-in and “green” out of the box performance.
- Specific RMS finish accelerates the creation of a proper transfer film when run with Hawk Performance® brand brake pads.
- All rotors are finished with a GEOMET® coating that protects both the internal and external surfaces from rust and corrosion.

WHAT IS GEOMET®?

GEOMET® is a proprietary water-based coating dispersion containing metal oxides, metallic zinc and aluminum flakes. The zinc and aluminum platelets align in multiple layers forming a metallic silver-gray coating. Applied as a liquid, the coating becomes totally inorganic after curing at 575-600° F (300-315°C).

ENVIRONMENTAL BENEFITS:

CHROMIUM-FREE- Does not contain any chromium (NO HEXAVALENT and NO TRIVALENT). GEOMET® meets the following regulations:

- Environmental Protection Agency (EPA)
- Occupational Safety and Health
- Administration (OSHA)
- DaimlerChrysler CS-9003
- General Motors GMW 3059
- Ford WSS-M99P9999-A1 (Hex 9)
- EU Directive on End of Life Vehicles

NO TOXIC METALS- Free from nickel, cadmium, lead, barium and mercury.

QUALITY: All Quiet Slot™ rotors are meticulously checked for proper balance, thickness, flatness and runout. All rotors are manufactured in ISO certified facilities.

COMPOUND	REMARKS	APPLICATIONS
DTC-70 Letter Code U	• 400-1600°F; 204-871°C • High Temp & High Torque • Provides Superior Pad and Disc Wear • Excellent Torque Control • Excellent Modulation and Release Characteristics • Designed for High Deceleration Rates	• NASCAR/NASCAR Modified • ARCA • Super Late Models • CORR Pro2/Pro4 • Pavement Circle Track • Sports Car/GT/GS/ All Club Levels • Open Wheel/Formula • Monster Trucks • Demanding Tarmac
DTC-60 Letter Code G Note: Slightly lower torque than DTC-70 - Recommended for use with DTC-70 when split friction between front and rear axle is desired	• 400-1600°F; 204-871°C • High Temp & High Torque • Provides Superior Pad and Disc Wear • Excellent Torque Control • Excellent Modulation and Release Characteristics • Heavier Gravel Rally • Lighter Tarmac Rally	• NASCAR/NASCAR Modified • ARCA • Super Late Models • Pavement Circle Track • CORR Pro2/Pro4 • Sports Car/GT/GS/ All Club Levels • Open Wheel/Formula • Popular choice on lightweight front axle apps w/ or w/o ABS
DTC-30 Letter Code W	• 100-1200°F; 38-649°C • Wide Temp Range • Controllable Torque • Smooth Feel and Bite • Excellent Release Characteristics • Multi-Purpose Gravel Rally • Excellent Rotor Wear	• NASCAR Modified • Circle Track • Dirt Circle Track • Drag Racing • Sprint Cars
DTC-15 Letter Code A	• 200-800°F; 92-427°C • Low to Mid Temp • Medium Torque • Torque Level Just Below DTC-30	• Circle Track • Dirt Track Late Model • Dirt Modified
DTC-05 Letter Code H	• 100-700°F; 38-371°C • Low to Mid Temp • Smooth Predictable Torque • Designed to Provide Lower Torque	• Autocross/Track Day Events • Dirt Modified • Specialty Caliper and Brake Kit
HT-14 Letter Code V Note: See DTC-60 and DTC-70 for latest material development	• 300-1400°F; 149-760°C • High Temp • High Torque • Designed for High Deceleration Rates	• Sports Car/GT • Open Wheel/Formula • F2000 • F3000
HT-10 Letter Code S Note: See DTC-60 for latest material development	• 300-1300°F; 149-704°C • Mid to High Temp • Intermediate to High Torque	• Road Racing for Higher Torque than Blue 9012 • Increased Track Day Performance
MT-4 Letter Code L Note: See DTC-60 and DTC-70 for latest material development	• 400-1200°F; 204-649°C • Mid to High Temp • Intermediate to High Torque	• Pavement Circle track (under 2800 lbs) • Pavement Street Stock (under 2800 lbs) • NASCAR Modified • Pavement Limited Late Model • Pavement Modified
Blue 9012 Letter Code E Note: See DTC-60 for latest material development	• 250-1000°F; 121-538°C • Low to Mid Temp • Low to Intermediate Torque • Excellent Modulation • Multi-purpose compound	• Road and Rally Racing • Entry Level Race Compound
Black Letter Code M Note: See DTC-60 for latest material development	• 100-900°F; 38-482°C • Lower Temp • Low to Intermediate Torque	• Circle Track • All-Purpose Compound • For Lower Temp and Torque Applications • Dirt Modified • Pavement (IMCA Style) modified
DR-97 Letter Code J	• 100-900°F; 38-482°C • Good Static and Dynamic Coefficient of Friction	• Specialty Calipers used in Low- to Medium-Deceleration Drag Racing
HP Plus Letter Code N WARNING: Due to this product's dramatic friction levels, the user may notice increased noise, dust and pad and rotor wear	• 100-800°F; 38-427°C • Wide Temp Range • Exceptional Stopping Performance • Designed to get you to and from the track without requiring brake change	• Autocross • Club Track Day Events • Popular Choice for Rear Axle use on GT, GS and Club Level Applications with ABS

Motorsports Compound Codes & Descriptions

Below are descriptions of the available compounds for Hawk Performance Motorsports brake pad compounds:

DTC-70

Extremely high torque with aggressive controllable initial bite. Superior release and torque control characteristics. Brake pads designed for cars with high deceleration rates with or without down force.

DTC-60

High torque with less initial bite than DTC 70. Superior release and torque control characteristics. Brake pads designed for cars with high deceleration rates with or without down force. Recommended for use with DTC-70 when split friction between front and rear axle is desired.

DTC-30

Brake pads are designed specifically for Dirt Circle Track applications. Uniquely controllable torque with smooth consistent feel and bite. Superior release and torque control characteristics.

DTC-15

Developed specifically to meet the demands of Dirt Circle Track applications. DTC-15 brake pads are a medium torque compound (less torque than DTC-30, more than DTC-5) with superior release characteristics and excellent cold effectiveness.

DTC-05

Developed specifically to meet the demands of lower torque Dirt Track Racing. This friction formulation provides very controllable, higher temperature performance as compared to stock pads.

HT-14

Very high torque with aggressive initial bite. Excellent modulation and release characteristics. Brake pads designed for cars with extremely high deceleration rates and downforce.

HT-10

Intermediate to high torque with a smooth initial bite. Very consistent pedal feel. Excellent modulation and release characteristics.

MT-4

Medium/High torque and temperature compound with Medium/High initial bite. Brake pads designed for circle track cars under 2800 lbs without high deceleration rates.

BLUE 9012

Medium/High torque and temperature compound with excellent brake modulation. #1 selling brake pad material for SCCA.

BLACK

Medium torque and temperature compound designed to be a good, all-purpose low-cost racing brake pad.

DR-97

Excellent static and dynamic coefficient of friction. Smooth linear torque. Low pad and rotor wear. Brake pads specifically designed for use in drag racing applications.

HP PLUS

HP Plus utilizes a unique Ferro-Carbon, high-tech friction material that was developed and manufactured for sport driving in autocross, Solo II and "track day" applications. The Ferro-Carbon formulation offers lower wear rates and higher torque values than other competitive materials.

Champions

DTC Rotor & Brake Pad System

Hawk Performance has developed the ideal rotor that optimizes brake performance and durability for short track racing. Our DTC rotors combine advanced design and metallurgy to create the perfect “matched set” system when run with our DTC brake pads. More stopping power and longer life are what you get when you install DTC rotors and pads!

DTC ROTOR

KEY FEATURES:

METALLURGY: DTC rotors are cast from a proprietary formulation of premium alloys, including long grain carbon iron for maximum thermal stability and resistance to distortion. Additional elements include copper & molybdenum for high-temperature strength & thermal crack resistance.

DESIGN: DTC directional rotors are engineered to provide efficient cooling, exceptional wear and reduced rotating mass for hard and intermediate braking asphalt & dirt track applications. Additionally, the combination of our unique interior vane and mounting lug design provides superior structural integrity.

MULTI-PASS PROGRESSIVE SLOTS: DTC front rotors feature our exclusive slot design that produces superior initial bite, release characteristics and wear debris removal.

SURFACE FINISH: All DTC rotors incorporate a specific RMS finish that enhances the creation of a proper transfer film, especially when run with Hawk's DTC brake pads.

QUALITY: Each DTC rotor is meticulously checked for proper balance, thickness, flatness and run-out. All rotors are manufactured in ISO certified facilities located in the U.S.A.

Frequently Asked Street Pad Questions

Q: What compound is best for my application?

A: This is highly dependent on the vehicle and expectations of the customer. In most cases we recommend that you reference our product literature, website, or contact us at 440-528-4000.

Q: What causes brake noise?

A: There are literally hundreds of reasons why brake noise occurs and most have nothing to do with brake pads. Proper installation, brake system maintenance, rotor quality and debris tend to be the most common causes.

Sometimes brake squeal can be an indicator that there is a problem. Maintenance is required if you experience brake squeal for any of the following reasons:

- Lack of friction material (brakes need to be replaced)
- Loose fitting brake in the caliper
- Loose fitting or missing brake hardware (i.e. shims, anti-rattle clips)
- Loose lug nuts or caliper hardware
- Debris caught between the rotor and the surface of the brake pad
- Heat cracked or worn rotors
- Uneven finish on resurfaced rotors

In some cases, a user may experience brake noise when no maintenance is required. We call these NVH (Noise, Vibration and Harshness) issues. Brake squeal is typically caused by vibration between the brake pads, rotors and brake calipers. Some brands of semi-metallic brakes are more likely to experience brake squeal due to the metallic ingredients in the brake pads.

Hawk Performance has a great reputation for manufacturing low-noise, high-performance brake pads. All Hawk Performance products have an OE quality shim, severe duty powder coat surface treatment and "GearHead Grease Paks" to virtually eliminate the risk of brake noise. Below are the instructions for proper use of our "GearHead Grease Paks."

1. To silence brake noise – Apply 1-2 grams on the backside of the brake pad and evenly spread across the surface making sure to cover any areas where the pad contacts the caliper or piston.
2. To lubricate calipers – Clean and inspect all brake caliper parts making sure to inspect for damage or excessive corrosion. Apply to pins, slides, bushings, pistons, rubber sleeves and seals. **DO NOT APPLY TO THE ROTOR FACE OR THE BRAKING SURFACE OF THE PAD!**

Caution: For eye and skin contact, flush with water for 15 minutes. Wash skin with soap and water; call a physician if irritation persists. If swallowed do NOT induce vomiting; call a physician. **KEEP OUT OF REACH OF CHILDREN.**

Q: How do I break-in my new pads?

A: Brake Pad Burnishing/Bedding-In Instructions

1. After installing new brake pads, make 6-to-10 stops from approximately 30-35 MPH applying moderate pressure.
2. Make an additional 2-to-3 hard stops from approximately 40-45 MPH.
3. **DO NOT DRAG BRAKES!**
4. Allow at least 15 minutes for the brake system to cool down.
5. After step 4 is completed, your new Hawk Performance brake pads are ready for use.

Q: Why should I follow a break-in procedure on new brake pads?

A: Correct brake pad break-in (bedding) is important to assure quality braking performance over the life of the pad. This procedure allows the rubbing surface of the brake pad to be brought to temperatures, creating a transfer-film layer of friction material to be applied to the rotor surface. This allows the brake pad material to rub against itself rather than the bare rotor. This increases the stopping performance of the brake pad and can reduce pad and rotor wear.

Q: Can I run cross-drilled or slotted rotors with Hawk Performance brake pads?

A: Yes you can. We do suggest a slotted or solid faced rotor for performance applications. Cross drilled rotors are primarily for looks and as such some trade offs will occur, such as increased brake pad wear and increased dust.

Q: Where can I find an authorized distributor of Hawk Performance brake pads?

A: www.HawkPerformance.com. You can find an authorized distributor of Hawk Performance high performance brake pads by entering your zip code in the "Where to Buy" box on the left menu bar of our website. If you are looking for a distributor by name and not by location, simply use the "Advanced Search Options" feature of our website. You can also contact us at 440-528-4000.

Q: Does Hawk Performance have a part for my vehicle application?

A: We are constantly developing new applications, so if you do not see your application listed in the application guide of this catalog, please search for it on our website. To search for a part for your vehicle application, enter the year and make in the "Find Part Now" box on the left menu bar of our website and hit enter. Select the model of your vehicle from the drop down menu and hit enter. Hawk Performance part numbers for your specified application will be displayed, if available.

Q: What can I do during installation to ensure my brakes won't squeal?

A: First, choose Hawk Performance high performance disc brake pads as your upgrade over other aftermarket brake suppliers. The next best steps you can take to avoid having noisy brakes are:

- Turn / machine the rotors (machining off a small layer of the brake rotor to make it smooth again)
- Wash and dry the rotor to rid of debris
- Install the pads securely and according to instruction
- Properly bed-in the pads according to instruction (see following question)
- Apply a thin layer of a silicone compound called anti-squeal brake lube on the back of the brake pads

Our standard installation procedures are outlined below. This information is printed on the box of every brake pad set we manufacture, and should be followed in accordance with the application-specific brake pad installation instructions provided by the vehicle manufacturer.

Brake Pad Installation Procedure

- Install brake pads properly. Be sure pads are securely positioned in the caliper.
- Flush system with fresh brake fluid.
- Check all hydraulic parts for excess wear and tear.
- Check disc for proper thickness, parallelism, and lateral runout.
- Check disc for scoring or grooves over .012" depth. If either applies, resurfacing is required.
- If discs do not need resurfacing, then contamination from the previous brake pads must be removed. Sand discs with 130-grit sandpaper using moderate pressure. Use soap and water to clean disc surface after sanding. Discs should be free and clear of oil, grease and brake fluid.
- Inspect calipers for freedom of movement. Lubricate where necessary.

Limited Lifetime Warranty

Hawk Performance will warranty products to be free of defects from workmanship and materials. This warranty does not apply to normal wear or damage caused by negligence, lack of maintenance, accident, abnormal operations, or improper installation or service. Hawk Performance does not make any other warranty claims, either expressed or implied, including the implied warranties of merchantability or fitness for a particular purpose. In no event will Hawk Performance be liable for incident or consequential damages of

any kind, whether such damages are claimed on account of breach of warranty, breach of contract, negligence, or strict product liability. This includes without limitation, damage to property, or other economic losses that may be incurred. Any, and all, warranty claims must be processed through Hawk Performance. All valid warranty claims will be replaced/reimbursed with Hawk Performance products of equal or greater value.

Frequently Asked Motorsports Pad Questions

Q: What are racing brake pads made from?

A: Racing brake pads are made from a variety of ingredients like metals, resins and fillers. The combination of ingredients and the size and weight of the ingredients used in the friction formula can create very different performance levels and characteristics.

Q: With all the different brake compounds available today, how do I make the proper choice of what to use on my racecar?

A: Choosing the proper brake pad compound that will provide the best performance for your Motorsports application can be made easier by following the guidelines outlined below:

- Determine what compounds and styles of brake pads are available for your calipers and type of racing.
- Determine the operating temperature of your car's brake system. Heat sensitive paint can be applied to the brake pads and rotors to help you gauge temperature. Tire pyrometers can be used, but due to the cool down time the temperature numbers may not be accurate.
- Upon learning your system's temperatures, or if you do not know your temperatures, contact Hawk Performance at 440-528-4000 for recommendations regarding proper brake material for your application.
- Other drivers that share your driving style will sometimes provide valuable information that may allow you to learn what brake pads other drivers have used and liked or disliked.
- Contact your local racing products dealer and inquire as to what brake pads they offer and recommend for your application.
- It's important to understand different types of racecars, racing surfaces and driving styles may require different levels of braking performance, and many drivers expect the brake system to have a certain feel that suits their individual needs. Because of this, it should not be assumed that what works for one driver would work for all. In some cases the best way to learn what is best for you is to experiment with a variety of friction compounds to determine how a particular pad differs from another regarding issues such as pedal feel, consistency and rotor and brake pad wear.

Q: What are some noticeable signs that I have made the wrong pad choice for my Motorsports racing application?

A: When a friction compound is used in a substantially higher temperature range than intended, the material can quickly lose its ability to perform correctly. Generally, an overheated brake pad will continue to provide a hard pedal but require more foot and pedal effort to achieve even marginal performance. Continued use during this type of circumstance can result in complete brake pad failure.

Q: What happens if I choose a brake pad compound that does not have a high enough temperature range for my application?

A: It's important to understand the chain of events that take place when a brake pad becomes too hot to work correctly. As the pad begins to lose performance effectiveness the driver may try to compensate by pushing harder and longer on the pedal. This may cause friction surface temperature to increase thereby increasing the brake problem. When this occurs, great stress is put on the friction material and the material can begin to crystallize. In extreme cases delaminating between the friction material and the pad's backing plate can sometimes occur. This type of situation may be corrected by choosing a friction compound designed to withstand higher temperature.

Q: Why should I perform a break-in procedure on new brake pads?

A: Correct brake pad break-in (bedding) is important to assure optimal braking performance over the life of the pad. This procedure allows the rubbing surface of the brake pad to slowly be brought up to racing temperatures. Proper bedding creates a transfer layer film of friction material to be applied to the rotor surface. This allows the brake pad material to rub against itself rather than the bare rotor. This increases the stopping performance of the brake pad and can reduce pad and rotor wear.

Q: What is the proper procedure for breaking in new brake pads?

A: Brake pad break-in procedure:

Brake Pad Burnishing/Bedding-In Instructions

1. After reaching medium speed engage brake pedal to slow car without coming to a complete stop. Release pedal quickly and do not drag brakes. Repeat four or five times.
2. At higher speeds engage brake pedal to slow car without coming to a complete stop. Release pedal quickly and do not drag brakes. Repeat five times.
3. At or near race speed engage brake pedal to slow car without coming to a complete stop. Release pedal quickly and do not drag brakes. Repeat three times. Allow a few seconds between brake engagements while car is in motion.
4. Do not hold brake pedal. Park car for approximately 20 minutes or until brake rotors are completely cool to the touch.
5. If during the above steps the brake pedal becomes soft or brake fade is noticed, park the car immediately for approximately 20 minutes. Do not hold brake pedal.

IMPORTANT REMINDERS WHEN BURNISHING/BEDDING BRAKE PADS

- Do not attempt to use badly worn or damaged rotors with new brake pads.
- Do not drag brakes while car is moving during break-in procedure.
- Do not engage pedal while car is stopped at any time following the break-in procedure.
- Upon completing the procedure, allow the brake system to completely cool before racing.
- Applying the pedal a few times before the start of the race will allow the brake pads to heat up before attempting to reach race speeds.
- Clean a used rotor surface with fine sand paper or steel wool, rinse with water, dry and install before bedding new pads.
- Some forms of racing don't allow time for the proper break-in procedure to be performed. However, it is still very important to attempt to perform at least the core of the procedure: Build up heat slowly and allow the system to completely cool down before racing if possible.

Q: What can happen to my brake pads if not bedded properly?

A: Proper break-in will assure that small amounts of heat are introduced to the brake pad. Brake pads that are brought up to temperature too fast and not properly allowed to cool down may quickly become glazed and not perform as originally intended. The pad's rubbing surface reaches extreme heat levels during racing use. The surface needs slow temperature increases to help prepare the pad. Large amounts of heat all at one time can cause the brake pad rubbing surface to become somewhat liquified and coat the pad surface with a glaze. This will dramatically reduce stopping performance as certain ingredients in the friction compound breakdown and cause glazing of the rubbing surface of the brake pad.

Q: How can I tell by looking at the brake pad if my pads have been glazed over?

A: When a brake pad glazes over, the friction surface develops a cloudy or glassy looking coating. It is possible to remove the glazed surface by using sand paper to grind away the damaged layer and expose a new layer that will require the proper bedding procedure.

Q: What is a pre-bedded brake pad?

A: Some brake pad manufacturers offer a pre-bedded pad and/or a pre-bedding service. Pre-bedding involves placing pads in a caliper and running them against a mechanically driven rotor in a controlled environment. The rotor and pads are slowly brought up to temperature and allowed to cool down over several cycles. This process simulates on track situations while allowing the two surfaces to mate correctly in an optimum environment. While this process can be very expensive, it greatly reduces the break-in time prior to pad purchase. In most cases the rotor and the pad are, and should be, sold as a matched set.

Q: What is a pre-burnished brake pad?

A: Some brake pads are pre-burnished during the manufacturing process. Pads that are pre-burnished have had high temperature applied to the rubbing surface to simulate the first few engagements on an actual race car. The process will allow the pad to break-in quickly and to begin working more effectively in a shorter time. Pre-burnished pads still need to be properly bedded to help assure that the pad and the rotor have an opportunity to mate correctly.

SINTERED METALLIC

Hawk Performance Sintered Metallic disc brake pads offer world-class braking performance for sport and heavy motorcycles. This product line combines the quality and fitment of Original Equipment with unsurpassed stopping power and quiet braking performance. In wet or dry braking conditions nothing beats Hawk's Sintered Metallic performance.

KEY FEATURES:

- Superior stopping power
- **HH+** RATED FRICTION MATERIAL, HIGHEST IN THE INDUSTRY
- Smooth, progressive engagement
- Extremely quiet
- Fade-Free performance
- Virtually dust free
- Lowest pad wear in the market
- Improved rotor life

N-A ORGANIC

Hawk Performance N-A Organic (Non-Asbestos Organic) disc brake pads offer "best in class" performance when compared to other leading aftermarket Organic pads. Silent stops and progressive brake modulation characteristics maximize rider comfort and control. Ideal for bikes with polished or chrome rotors, but very effective on standard steel rotors.

KEY FEATURES:

- Excellent stopping power
- **GG** RATED FRICTION MATERIAL
- Smooth, linear engagement
- Noise-Free performance
- Exceptional thermal stability
- Extremely gentle on rotors
- Extended pad life
- Low dust
