### About ifm...

*ifm is one of the world's largest manufacturers of industrial sensors and controls products, producing over 9 million sensors annually.*

*More than 4,800 ifm employees serve over 110,000 purchasing customers worldwide.*

*ifm has more than 70 subsidiaries located in all major countries.*

*Annual global sales exceed \$820 million USD.*

*Our dedication to innovation, quality and customer support has made us a global market leader.*

## The ifm Commitment

**ifm people.** The ifm team of employees is committed to helping you succeed in your business. We directly service and work with over 20,000 customers in North America.

**ifm products.** For over 40 years, ifm has developed, manufactured, and marketed sensors to industries that include assembly and robotics, automotive, material handling, packaging, metal forming, plastics, and food and beverage. We offer a complete family of position sensors, fluid sensors, diagnostic systems, networking products, and wiring solutions.

**Quality.** There can be no compromise in the quality and reliability of sensors that are applied in your production facility. The ifm new product development process incorporates specific testing for sensors and controls to withstand environments with shock and vibration, electrical noise and temperature fluctuations.

**Investment in R&D.** Developing new products that increase uptime and productivity is a core belief of our company. We apply practical innovation to simplify technology and develop products that can have a positive impact on your production process.

**Application know-how.** We have over 40 years of experience in working with industrial automation applications. Our knowledgeable team of technical support engineers will work with you to recommend the right solution, the first time.

**ifm business philosophy.** ifm provides a knowledgeable and courteous service center team to assist with order placement and technical support. We offer an efficient distribution center for accurate and on-time delivery of products. ifm publishes list prices in literature and on our website, and we always stand behind the quality and performance of our products.

**Global presence with local focus.** With more than 4,800 dedicated ifm employees in over 70 countries, you can count on local support all over the world.

**ifm efector** – *close to you!*

## Our people and our products are committed to helping you succeed in your business

### ifm North American Operation

### ifm Global Presence

*Whether you ship your machines internationally or have manufacturing plants all over the world, ifm has local support in over 70 countries.*

*You can count on ifm anywhere in the world.*

### Rich History... Promising Future

ifm electronic, the parent company of ifm efector, was founded in 1969.

For over 40 years, ifm has manufactured and marketed electronic sensors and controls for industrial automation applications.

ifm employs over 4,800 dedicated individuals who provide outstanding product support and technical service.

More than 110,000 customers purchase ifm products worldwide.

### Reliable Products... Innovative Design

ifm is currently one of the world's largest manufacturers of industrial sensors and controls, producing over 9 million sensors annually.

ifm offers a broad product range that includes sensors and controls for industrial automation applications.

ifm's core competency for industrial product design is to develop products with robust housings, easy user interfaces and flexible output stages.

ifm makes large investments in R&D and employs over 600 development engineers. Our R&D team has more than 600 registered ifm patents worldwide.

ifm has received multiple awards for innovation and breakthrough technologies.

An ISO 9001:2008 compliant company.

Our dedication to innovation, quality and customer support has made ifm a global leader in sensors and controls.

## Reliable service from a dedicated team

Reliable  
Service  
Center

### Service Center

*You can count on our Service Center team to be a reliable partner. That means easy order placement and knowledgeable technical support.*

*Our Service Center team includes application engineers who can assist with technical questions and application solutions. ifm customer service representatives can assist with order placement, product quotes, and delivery information. Staffed from 7:30 am to 6:30 pm EST to ensure time-zone coverage.*

Dedicated  
Sales  
Engineers

### On-Site Sales Support

*You can count on our experienced team of ifm sales engineers to understand your applications and challenges. The ifm Direct Sales Team provides on-site application assistance and technical support throughout North America.*

*Our sales engineers work with corporations to coordinate global projects and to develop sensor standards that result in reducing inventory costs and simplifying maintenance.*

On-time  
Delivery with  
Accuracy

### Logistics

*On time delivery and accuracy of your order is our goal in the ifm Distribution Center. There can be no compromises when it comes to uptime in your facility.*

*The ifm Distribution Center is located in Downingtown, PA, just outside Philadelphia. More than 15,000 orders are shipped per month with an accuracy rate of 99%.*

R&D that  
Delivers  
Solutions

### Research and Development

*The ifm product development engineers design and test sensors in conditions that far exceed actual application environments. There can be no compromises when it comes to uptime in your facility.*

*Our team designs products that reduce machine downtime, increase productivity and simplify installation.*

### Our Mission:

We contribute to our customers' success by providing innovative solutions through continuous development of our people, products and processes.

### The ifm Advantage

ifm has built a business model that focuses on working directly with our customers.

*There are no compromises when it comes to our customers' success.*

### Markets include:

Assembly and robotics  
Automotive  
Food and beverage processing  
Machine tool  
Material handling  
Mobile equipment  
Packaging  
Metal forming  
Plastics

**ifm efector** – close to you!

## ifm's Sensors and Controls catalog represents our most popular products for industrial automation

### Position sensors

#### Inductive sensors

Pages: 10 - 43

Non-contact inductive sensors detect metallic targets.

#### Capacitive sensors

Pages: 44 - 47

Capacitive sensors detect non-metallic targets, e.g. plastic, glass and wood.

#### Cylinder sensors

Pages: 48 - 53

Low-profile T-slot and C-slot cylinder sensors detect cylinder position.

#### Photoelectrics and lasers

Pages: 54 - 83

Visible red and laser provide long-range detection.

#### Distance, color and contrast

Pages: 84 - 89

Photoelectric solutions for long ranges, color and contrast applications

#### Fiber optics

Pages: 90 - 95

Fiber optic sensors, controllers and amplifiers for areas with limited space.

### Motion control

#### Speed monitors

Pages: 96 - 99

Self-contained speed monitors detect rotational speed conditions.

### Vision sensors

#### efector dualis Contour sensors

Pages: 106 - 107

Detects and compares defined shapes to provide 100% inspection testing.

#### efector dualis Pixel Counter

Pages: 108 - 109

Analyzes the area of an object and identifies an object by counting pixels.

#### Multi-Code readers

Pages: 110 - 111

Identifies, qualifies and verifies 2D data matrix codes and 1D barcodes.

#### 3D Image Sensor

Pages: 112 - 113

3D Image Sensor evaluates shape, size and volume to identify objects in three dimensions.

### Safety products

#### Inductive safety sensors

Pages: 116 - 117

Non-contact, fail-safe inductive sensors detect metal targets.

#### Light curtains

Pages: 118 - 125

Light curtains offer a hands-free solution to protect personnel.

#### Safety relays

Pages: 126 - 127

Multi-function safety relays connect safety devices.

#### Safety networking

Pages: 128 - 131

Safety at Work connects safety components directly to the AS-i network.

## Process sensors

### Pressure sensors

Pages: 134 - 149

Sensors and transmitters monitor system pressure in hydraulic and pneumatics.

### Flow sensors

Pages: 150 - 159

Flow sensors, magmeters, and ultrasonic flow meters detect the flow rate of liquids and gases.

### Level sensors

Pages: 160 - 173

Point and continuous level sensors detect level of liquids, powders, granular solids and plastics.

### Temperature sensors

Pages: 174 - 189

Modular temperature monitoring products provide feedback in temperature control applications.

## Industrial networks

### AS-i networking

Pages: 192 - 201

Networks sensors and actuators with plug-and-play functionality.

### Power supplies

Pages: 202 - 203

Power supplies provide the voltage for sensors, actuators, and other electronic loads.

## Machine condition

### Vibration sensors

Pages: 206 - 207

Continuously monitor machine's vibration level to prevent equipment failure.

### efector Metris

Pages: 208 - 209

In-line flow meter monitors compressed air systems and specialty gases.

## Wiring technology

### M8 Pico cordsets

Pages: 212 - 213

Quick disconnect M8 Pico cordsets and field wirable connectors for electrical wiring.

### M8 Pico wiring block systems

Pages: 214 - 217

Quick disconnect wiring blocks offer plug-and-play functionality.

### M12 Micro cordsets

Pages: 218 - 219

4-pin Micro DC cordsets and field wirable connectors.

### M12 Micro wiring block systems

Pages: 220 - 221

4-port and 8-port M12 Micro DC wiring blocks and patchcords.

### 1/2" Micro AC cordsets

Pages: 222 - 223

3-pin Micro AC cordsets and field wirable connectors.

**For our complete list of over 8,000 sensors and controls products, visit our website**

## ifm's website – [www.ifm.com/us](http://www.ifm.com/us) – Represents our entire line of 8,000 products

Browse and select  
your product

Choose your type...

Add to  
your cart

### ifm.com/us – the easy way to find ifm products

Our newly redesigned website allows you to compare products to find the best solution to your application.

- ifm.com/us offers thousands of sensors and controls products.
- Click on a product category in the Product Lines menu.
- Once you've found your product category, click on "Browse products."

### Browse product line

Browse a complete product line on one page. Each product offers the following information:

1. Key features – includes outputs, mounting options and other unique features.
2. Learn more – One-minute videos, brochures, useful charts and applications.
3. Applications – full-color drawing examples showing sensor in application and its benefits.
4. Select product – locate the best fit for your application and the site will take you to its product page.

### Product page

- Easy one-stop shopping
- Full-color photo with dimensions
- Product selection
- Technical specifications
- Recommended accessories and cordsets
- Includes list price information

### e-Shop – available 24 hours a day

Purchase sensors and controls through e-Shop – ifm's on-line store. Not only does e-Shop offer a fast and easy way to buy products, e-Shop can also help to organize products for future purchases.

- Quick Order feature allows multiple products to be ordered at once.
- The Favorites option is a great resource to build a personalized ifm product catalog and to quickly find the product that's continually ordered.
- The History feature offers the ability to copy / paste a previous order. It's the fastest way for you to place a re-order.
- The History feature enables you to track the status of an order and to get order details.

*It's easy to find a product on [www.ifm.com/us](http://www.ifm.com/us)*

### Technical documentation

*ifm's comprehensive data sheets offer all the specifications needed to make a decision on the right sensor for your application.*

## Data sheet

- *Technical specs*
- *Electrical data and connection*
- *Product characteristics*
- *Dimension drawing*
- *Wiring diagrams*
- *Approvals*
- *Purchasing information including stock availability and US list prices*

## Accessories

- Cordsets and cable assemblies
- Mounting brackets and systems
- Power supplies

## Operating instructions

- *Installation instructions*
- *Software manuals*

## CAD

- 2D and 3D CAD drawings in standard formats

### More information

- *Certificates of approval*
- *Software downloads*
- *Summary specifications for project and estimate bids*

# Table of Contents – Position Sensors

## Inductive proximity sensors

Tubular Ø4 mm, Ø6.5 mm, M5; DC	10 - 11
Tubular M8, M12, M18, M30, flush; DC	12 - 13
Tubular M12, M18, M30, non-flush; DC	14 - 15
Tubular M8, M12, M18, M30, short body; DC	16 - 17
Tubular M8, M12, M18, M30, long body; DC	18 - 19
Tubular M8, M12, M18, M30 for metal forming applications; DC	20 - 23
Tubular M8, M12, M18, M30 for oils and coolants applications; DC	24 - 25
Tubular M12, M18, M30 for oils and coolants applications; DC	26 - 27
Tubular M30 for high temperature applications; DC	28 - 29
Tubular M12, M18, M30, quick disconnect; AC	30 - 31
Tubular M12, M18, M30, prewired and quick disconnect; AC	32 - 33
Miniature rectangular; DC	34 - 35
Miniature rectangular; AC	36 - 37
Medium and large rectangular; DC	38 - 39
Medium and large rectangular; AC	40 - 41
Ring and tube; DC	42 - 43

## Capacitive sensors

Tubular M12; DC	44 - 45
Touch sensor; DC	46 - 47

## Cylinder sensors

T-slot cylinder sensors; DC	48 - 49
Mounting accessories	50 - 51
C-slot cylinder sensors; DC	52 - 53

## Photoelectrics and lasers

<i>Tubular M12; DC – max. range 4 m</i> . . . . .	54 - 55
<i>Compact M18; DC – max. range 20 m</i> . . . . .	56 - 57
<i>Compact M18; AC – max. range 20 m</i> . . . . .	58 - 59
<i>Tubular M18; DC – max. range 25 m</i> . . . . .	60 - 61
<i>Tubular M18; DC – Class 1 Laser – max. range 60 m</i> . . . . .	62 - 63
<i>Tubular M18; AC – max. range 15 m</i> . . . . .	64 - 65
<i>Compact M30; DC – max. range 15 m</i> . . . . .	66 - 67
<i>Tubular M30; DC – Class 2 Laser (Time-of-Flight principle) – max. range 2 m</i> . . . . .	68 - 69
<i>Small rectangular; DC – stainless steel housing – max. range 10 m</i> . . . . .	70 - 71
<i>Small rectangular; DC – plastic housing – max. range 10 m</i> . . . . .	72 - 73
<i>Small rectangular; DC – plastic housing – Class 1 Laser – max. range 15 m</i> . . . . .	74 - 75
<i>Medium rectangular; DC – max. range 25 m</i> . . . . .	76 - 77
<i>Medium rectangular; DC – Class 2 Laser (Time-of-Flight principle) – max. range 2 m</i> . . . . .	78 - 79
<i>Large rectangular; DC – max. range 80 m</i> . . . . .	80 - 81
<i>Fork and angle; DC – max. range 120 mm</i> . . . . .	82 - 83

## Distance, color and contrast

<i>Large rectangular; DC – Class 1 and Class 2 Laser, distance (analog) – max. range 75 mm</i> . . .	84 - 85
<i>Medium rectangular; DC – color and contrast – max. range 22 m</i> . . . . .	86 - 87
<i>Medium and small rectangular; DC – clear object – max. range 1.5 m</i> . . . . .	88 - 89

## Fiber optics

<i>Fiber optic controllers, multi channel; DC</i> . . . . .	90 - 91
<i>Fiber optic amplifiers, single fiber; DC</i> . . . . .	92 - 93
<i>Fiber optics, plastic and glass; DC</i> . . . . .	94 - 95

## Top five product features!

- *Small housing, long range! Compact design is ideal for applications with limited mounting space*
- *Extended sensing ranges reduce failure from mechanical damage and increase uptime*
- *Four LEDs provides 360-degree visibility for status indication*
- *Innovative mounting solutions reduce installation and replacement time*
- *Available in quick disconnect and prewired options – visit [www.ifm.com/us](http://www.ifm.com/us) for more sensor options*

## Longer sensing ranges in compact rugged housings

Today's industrial automation machines are extremely compact and highly automated. The smaller footprint allows for reduced space on the plant floor, but also minimizes the mounting space for sensors used for position control.

ifm's solution for position control is a line of miniature sensors with long sensing ranges. The versatile housings fit a variety of applications that have space limitations.

Features include:

- Up to 2.5 times longer sensing ranges than most conventional switches of the same size.
- Housing lengths start at 30 mm.
- Integrated 360° visible LED for visual indication of operating status.
- A variety of mounting accessories are available to suit most applications.

**IT5044 Actual size**

## Top five product features!

- Metal face flush mountable, stainless steel housing and sensor face withstand physical damage in industrial automation applications
- Sensor design dramatically extends life-in-application by a factor of 15 compared to plastic face sensors
- Extended sensing ranges increase distance between the sensor and target which increases uptime
- Permanent laser-etched part numbers will not wear off over time
- 360° ring LED for status indication

## Metal face technology design dramatically improves life-in-application and increases production uptime

Metal face technology can dramatically extend life-in-application for the sensor.

In industrial automation applications, plastic sensors can fail from liquid ingress, damage from target impact, and overall wear from high shock and vibration.

ifm's non-contact, zero-leak, all-metal sensors are so robust that they may outlast the life of your machines! Our highly durable, stainless steel sensors are completely sealed against ingress and carry protection ratings of IP67, IP68 and IP69K.

ifm metal face sensors offer reliable performance and durability in tough industrial

applications. Stainless steel construction extends the sensor's life-in-application by a factor of 15 compared to teflon or plastic face sensors. ifm metal face sensors increase plant uptime, and its price point is the best value in the market.

The stainless steel sensors are subjected to a variety of tests that insure reliable performance in application.

- Stainless steel sensor face and housing withstand damage from machining process and moisture ingress.
- Sensor design extends life-in-application by a factor of 15.
- Extended sensing range increases the distance between the sensor and the target.

## Top five product features!

- Metal face non-flush mountable, stainless steel housing and sensor face withstand physical damage in industrial automation applications
- Sensor design dramatically extends life-in-application by a factor of 15 compared to plastic face sensors
- Extended sensing ranges increase distance between the sensor and target which increases uptime
- Permanent laser-etched part numbers will not wear off over time
- 360° ring LED for status indication

## Metal face technology design dramatically improves life-in-application and increases production uptime

Metal face technology can dramatically extend life-in-application for the sensor.

In industrial automation applications, plastic sensors can fail from liquid ingress, damage from target impact, and overall wear from high shock and vibration.

ifm's non-contact, zero-leak, all-metal sensors are so robust that they may outlast the life of your machines! Our highly durable, stainless steel sensors are completely sealed against ingress and carry protection ratings of IP67, IP68 and IP69K.

ifm metal face sensors offer reliable performance and durability in tough industrial applications. Stainless steel construction extends the sensor's life-in-application by a factor of 15

compared to teflon or plastic face sensors. ifm metal face sensors increase plant uptime, and its price point is the best value in the market.

The stainless steel sensors are subjected to a variety of tests that insure reliable performance in application.

- Stainless steel sensor face and housing withstand damage from machining process and moisture ingress.
- Sensor design extends life-in-application by a factor of 15.
- Extended sensing range increases the distance between the sensor and the target.

### Challenges with side sensing

Side sensing challenges can cause traditional sensors to indicate false outputs by detecting metal near the sensor face. ifm's metal face sensors are not affected by materials surrounding the sensor and offer consistent, reliable detection.

## Top five product features!

- *Extended sensing ranges reduce failure from mechanical damage and increase uptime*
- *Ideal for non-contact detection of metal targets in position sensing applications*
- *Four bright LEDs provide 360-degree visibility for status indication and make troubleshooting in applications easy*
- *Robust industry standard housings designed and tested to withstand industrial automation environments*
- *Sensors feature standard M12 industrial connection for quick installation*

## "Short body" sensor with extended range technology reduces failures from mechanical damage

ifm inductive sensors incorporate extended sensing ranges that enable the sensor to be mounted farther away from a target increasing the distance between the target and the sensor. This prevents mechanical damage from physical impact.

ifm sensors are designed to reliably perform in industrial control applications. They are tested to resist shock, vibration and electrical noise.

## Quality through automation and a great value

ifm inductive sensors are manufactured with a high level of automation. An automated test cell performs a complete function test on every sensor prior to shipping. These sensors incorporate performance features for today's industrial automation requirements, uncompromising quality that increases production uptime, and a price point that sets a new benchmark for value.

## Top five product features!

- *Extended sensing ranges reduce failure from mechanical damage and increase uptime*
- *Ideal for non-contact detection of metal targets in position sensing applications*
- *-40...185 °F wide temperature range offers flexibility*
- *Robust industry standard housings are rated IP68 / IP69K and reliably perform in environments with oils and coolants*
- *Four bright LEDs provide 360-degree visibility for status indication and make troubleshooting in applications easy*

## "Long body" sensor with extended range reduces failures from mechanical damage

**NEW!** ifm's "long body" inductive sensors incorporate extended sensing ranges that enable the sensor to be mounted farther away from a target increasing the distance between the target and the sensor. This prevents mechanical damage from physical impact.

These new generation sensors are designed and tested to provide reliable position detection in industrial automation. They are tested to resist shock, vibration and electrical noise.

The zero-leak sensors are rated IP68 / IP69K against liquid

ingress and can resist the synthetic oils and coolants used in harsh applications.

ifm proximity sensors increase plant uptime, and its price point is the best value in the market.

## Tested for oils and coolants

**High temperature IP68 coolant test**  
Sensors are submerged in industrial oils and coolants at 185 °F. The sensors successfully pass the test and maintain sensing characteristics.

Metal forming applications

## Top five product features!

- *Stainless steel sensor face and housing withstand damage from physical impact in the part loading process in manufacturing cells*
- *High temperature, weld slag resistant coating prevents weld slag from adhering to sensor*
- *Sensor design dramatically extends life-in-application by a factor of 15 compared to Teflon™ and plastic face sensors*
- *Extended sensing ranges increase distance between the sensor and target which increases uptime*
- *Permanent laser-etched part numbers will not wear off over time*

## High performance at a good value

ifm's metal face sensors are designed and tested to provide reliable position detection in the toughest welding and metal stamping applications. The stainless steel sensor face and housing withstand damage from physical impact in the part loading process in manufacturing cells. A high temperature weld slag resistant coating prevents weld slag from adhering to the sensor, eliminating abrasive cleaning techniques.

## The right combination of price and performance

Priced lower than competing metal-faced sensors, ifm's sensors are an exceptional benchmark for value. High performance, longer life-in-application and a low price point. The ifm metal face sensors can now be used as a plant standard – not just a solution for harsh applications.

### Challenge

Plastic and teflon sensors life expectancies are reduced from weld-slag build-up and physical impact from the part-loading process in manufacturing cells.

### Solution

The ifm metal forming sensor's stainless steel construction and high temperature weld-slag resistant coating withstands damage from impact and weld slag build-up.

## Designed and tested to increase life-in-application

### ifm Impact Test

Sensors are hit twice every second by a 1 kg hammer. This represents the force of a large part being loaded in a cell.

### ifm Abrasion Test

Sensors are scoured with wire wheel brushes for 1 million passes to simulate abrasive cleaning processes.

Metal forming applications

## Top five product features!

- *Stainless steel sensor face and housing withstand damage from physical impact in the part loading process in manufacturing cells*
- *High temperature, weld slag resistant coating prevents weld slag from adhering to sensor*
- *2-wire DC sensor with PNP or NPN programmable output*
- *Flexible wiring options directly replace 3-wire PNP and 3-wire NPN sensors*

## Withstands damage from physical impact in manufacturing cells

ifm's metal face sensors are designed and tested to provide reliable position detection in the toughest welding and metal stamping applications. The stainless steel sensor face and housing withstand damage from physical impact in the part loading process in manufacturing cells. A high temperature weld slag resistant coating prevents weld slag from adhering to the sensor, eliminating abrasive cleaning techniques.

### Directly replaces 3-wire sensors

ifm has designed sensors to provide flexible wiring solutions for our customers. These 2-wire sensors can directly replace 3-wire sensors

## Designed and tested to increase life-in-application

### ifm Impact Test

Sensors are hit twice every second by a 1 kg hammer. This represents the force of a large part being loaded in a cell.

### ifm Abrasion Test

Sensors are scoured with wire wheel brushes for 1 million passes to simulate abrasive cleaning processes.

Oils and coolants applications

## Top five product features!

- *Stainless steel housing and sensor face withstand physical damage from machining process and moisture ingress*
- *Permanent laser-etched part numbers will not wear off over time*
- *Sensor design dramatically extends life-in-application by a factor of 15 compared to plastic face sensors*
- *Extended sensing ranges increase distance between the sensor and target which increases uptime*
- *Models available with ferrous-only sensing technology which ignores aluminum chips that can cause false triggers*

## Stainless steel sensors for oils and coolants

ifm's metal face sensors are designed and tested to provide reliable position detection in the extreme conditions found in oils and coolants applications. The stainless steel sensors are subjected to a variety of tests that insure reliable performance in application, including high performance IP68 coolant test.

- Stainless steel sensor face and housing withstand damage from machining process and moisture ingress.
- Sensor design extends life-in-application by a factor of 15.
- Extended sensing range increases the distance between the sensor and the target.

*Ferrous-only technology ignores aluminum chips and eliminates false signals.*

### Sensors with ferrous-only sensing technology

ifm's ferrous-only technology can be used inside machining centers where there is a high density of aluminum chips. The ferrous-only sensor will detect the steel target on fixtures and clamps used to position the product. During the machining operation, the sensor will ignore the aluminum chips that can cause false triggers.

The sensor's multi-coil design provides greater stability and the longest sensing ranges in the market today. The one-piece housing features a durable, stainless steel sensing face that prevents aluminum chips from adhering to and embedding in the face of the sensor.

## Testing that insures reliable performance

### High performance IP68 coolant test

Sensors are completely submerged in industrial oils and coolants at a temperature of 176° F. The sensor successfully passes the test and maintains its sensing characteristics.

### PNP to NPN converter cordset

This cordset converts PNP outputs to NPN outputs.

Oils and coolants applications

## Top five product features!

- *Extended sensing ranges increase distance between the sensor and target which increases uptime*
- *Models with robust 316 stainless steel housings withstand aggressive oils and coolants*
- *Models with chip-resistant ceramic sensing faces*
- *K=1 sensing technology provides same sensing range for all models*
- *Industry standard M12 Micro DC connectors*

## Robust sensors for oils and coolants

The oils and coolants used in metalworking applications can penetrate into the housing of a sensor resulting in component failure and sensing range fluctuations. Through research and experience, a number of oils and coolants were identified that were used by industry leaders.

ifm's sensors were completely submerged in these oils and coolants at a temperature of 176 °F. The sensor's zero-leak design was verified by measuring the sensing range after prolonged exposure in the chamber. The sensors passed this test with no change in sensing range characteristics.

### K factor 1 sensing technology

Standard technology proximity sensors have correction factors for sensing ranges depending on the target material. For example, the range for an aluminum target compared to a mild steel target is reduced by 60%. The K=1 technology sensors have a correction factor of one for all metals. Therefore, these sensors have an equal range for aluminum and steel targets.

## Tested for oils and coolants

**High temperature IP68 coolant test**  
Sensors are submerged in industrial oils and coolants at 176 °F. The sensors successfully pass the test and maintain sensing characteristics.

### 1000-hour cycle test

Sensors are cycled between -30 °C and 70°C to apply stress on the electronic and mechanical components and to check overall design integrity.

## Top five product features!

- High temperature inductive sensors withstand extreme heat
- Designed and tested for high temperature applications typically found in the steel and glass industries
- For permanent operating temperatures up to 180°C (356°F)
- High grade stainless steel housing, Liquid Crystal Polymer (LCP) sensing face and silicone cable jacket
- No external amplifier needed

## High temperature inductive sensors can take the heat

High temperature inductive sensors can monitor the continuous casting line to the cooling bed in a steel forming application.

**NEW!** ifm has expanded its line of inductive sensors for high temperature applications. Now the product line includes 12 mm, 18 mm and additional 30 mm diameter housings to fit most high-temperature applications. The rugged, stainless steel housings can be mounted in permanent operating temperatures up to 180°C (356°F).

These sensors are especially suitable for applications in the steel, glass and furnace industries. The sensors' housings are manufactured with high grade stainless steel, a liquid crystal polymer (LCP) sensing face and a silicone cable jacket.

For permanent operating temperatures up to 180 °C (356 °F)

### Application example: Industrial furnaces

The high temperature sensor can monitor the open / close position of furnace doors.

### Ideal for high temperature applications

#### Steel mills

- Position monitoring on cooling beds
- Open/close monitoring of furnace doors
- Position monitoring on rolling mills

#### Glass manufacturers

- Open/close monitoring of furnace doors
- Position monitoring on glass conveyors

## Top five product features!

- Extended sensing ranges reduce failure from mechanical damage and increase uptime
- Models available in universal voltage with a range of 20...250 V AC/DC
- Industry standard M12, M18 and M30 diameter housings to fit a variety of industrial automation applications
- Available in quick disconnect and prewired options – visit [www.ifm.com/us](http://www.ifm.com/us) for more sensor options
- Robust metal housings are designed and tested to withstand industrial automation applications

## Flexible mounting and quick installation

A three-piece solution provides flexible mounting and quick installation. ifm has developed accessories and connectors to simplify the installation process for inductive proximity sensors. The overall installation time of a proximity sensor can be further reduced by utilizing ifm efector's quick disconnect cordset for "plug and play" wiring.

### Sensing range is determined by the physical size of the sensor

The strength of the radiated sensing field is a function of the size of the core in the sensor. Larger sensors have larger cores, and therefore, longer sensing ranges.

## Select from 3 brackets for installation flexibility

ifm's snap clamp allows quick replacement of a switch with no tools or mounting nuts. The clamp features a "positive stop" that provides exact placement every time.

Metal quick mount sleeve features a "positive stop" for accurate placement every time.

L-Bracket secures tubular sensors and mounts quickly.

- *2 meter high-flex PVC cable*
- *Available in quick disconnect and prewired options – visit [www.ifm.com/us](http://www.ifm.com/us) for more sensor options*

## Robust housings designed and tested for industrial automation

ifm's prewired tubular sensors provide reliable position detection throughout the industrial automation process. The robust, metal housings are ideal for tough applications found in robotics, packaging, assembly automation and material handling.

Extended sensing ranges allow the sensors to be placed farther away from a target which reduces the chance of damage from physical impact. The sensor's high-flex PVC cable can withstand repetitive movement.

### Sensing range is determined by the physical size of the sensor

The strength of the radiated sensing field is a function of the size of the core in the sensor. Larger sensors have larger cores, and therefore, longer sensing ranges.

## Select from 3 brackets for installation flexibility

ifm's snap clamp allows quick replacement of a switch with no tools or mounting nuts. The clamp features a "positive stop" that provides exact placement every time.

## Top five product features!

- *Small package, large sensing range! Compact design is ideal for applications with limited mounting space*
- *Sensors retrofit V3 mechanical switches which increases uptime and reduces installation time*
- *Wiring flexibility – sensors available with quick disconnect or prewired 300 mm cable with M8 Pico connector*
- *Robust industry standard housings designed and tested to withstand industrial automation environments*
- *Plastic and metal housings to suit application needs*

## Compact sensors with powerful performance

ifm efector's small rectangular proximity sensors are ideal for sensing the "open" and "closed" positions of a rising stem valve. The housing design of the IS Series family is a direct replacement for V3 style mechanical devices. The sensors are based on standard inductive technology and are mounted in the valve top for non-contact sensing of the stem.

ifm proximity sensors are designed as a sensor "system" with surface-mounted components on flexible polyamide film. All elements are carefully matched to expand and contract together, minimizing the effects of thermal shock. Sensors with an IP67 rating are constructed to withstand washdown conditions.

Compact rectangular sensors can be mounted in the valve top for non-contact sensing of the stem.

## Top five product features!

- "Cube" sensing face can rotate in one of five different directions for application versatility
- Easily retrofits limit switches using only half the space
- Extended sensing ranges reduce failure from mechanical damage and increase uptime
- Two corner-mounted bright LEDs indicate power and switching status
- ID unit with terminal chamber offers convenient wiring of various lengths

## Rugged housing for industrial applications

IMC rectangular inductive proximity sensors feature extended sensing ranges for rugged industrial automation applications. The sensor can be placed farther away from the target which provides protection against mechanical damage in applications such as conveying.

Ideal for packaging lines and conveying applications, the IMC "Cube" sensor offers two corner-mounted LEDs to indicate power and output.

### Compact size, long sensing range

The compact sensor "cube" measures 40 x 40 x 66mm and features a sensing face that rotates in one of five different directions. An integrated mounting bracket offers simple installation and the sensor's Micro DC connector rotates 270 degrees for optimal mounting versatility.

### Flexible mounting options

The IMC "Cube" sensor can rotate in one of five different directions for application versatility.

### PNP to NPN converter cordset

This cordset converts PNP outputs to NPN outputs.

## Top five product features!

- IM Series "Cube" sensing face can rotate in one of five different directions for application versatility
- Two corner-mounted bright LEDs indicate power and switching status
- Easily retrofits limit switches using only half the space
- ID and IM Series feature extended sensing ranges reduce failure from mechanical damage and increase uptime
- Micro AC connector rotates 270 degrees for optimal mounting versatility

## Robust rectangular sensors easily retrofit limit switches

Smaller and more robust than traditional limit switches, ifm's IM Series rectangular inductive proximity sensors feature extended sensing ranges for industrial automation applications. Both ID and IM Series sensors offer extended sensing ranges that allow them to be placed farther away from the target which provides protection against mechanical damage. Ideal for packaging lines and conveying applications, the sensors offer bright LEDs to indicate power and output.

## Application flexibility

The IMC "Cube" sensor can rotate in one of five different directions for application versatility.

Traditional limit switches are large with moving parts

IMC Cube is compact with no moving parts.

## Top five product features!

- *Ring and tube inductive sensors detect metal objects inside tubing*
- *Static and dynamic versions with extremely quick response times*
- *High resolution – even steel balls with 0.6 mm diameters can be detected*
- *Pulse stretching and sensitivity adjustable via potentiometer*
- *Normally open and normally closed options available in varying diameters and connection options*

## ifm's ring and tube inductive sensors are ideal for feeder process applications

ifm's ring and tube inductive sensors detect small metal objects that pass through tubing. These sensors are ideal for assembly automation applications that include feeder processes and parts counting. Two output versions are available: static and dynamic.

### Static and dynamic operating principal

**Static sensors** operate like an inductive proximity sensor and generate an output signal when there is metal in the detection zone. These sensors can be used for a variety of feed applications that include detecting falling screws or monitoring for jams. Static-style sensors are also used in wire-brake detection applications.

**Dynamic sensors** are used when very small parts with low mass or fast-moving parts need to be detected. When the sensor detects a part, it generates an output, which is adjustable from 0.1 to 150 ms. The resolution is also adjustable for the application needs and will remain stable, even in the case of metal contamination in the tube.

### Ring and tube sensors with high resolution

*Ideal for assembly automation applications that include feeder processes and parts counting.*

### Application solutions

*Ring sensor detects parts in hoses*

*Tube sensor detects parts in feed hose*

*Wire break detection*

## Top five product features!

- Ideal for sensing non-metallic objects such as plastic, glass, wood and paper
- Robust stainless steel housing withstands harsh industrial environments
- Potentiometer enables easy sensitivity setting
- High performance PEEK sensing face
- 4-port LED for 360° visibility

## Capacitive proximity sensors detect the position of non-metallic objects

Capacitive proximity sensors use non-contact sensing and solid state circuitry to ensure durability in the most aggressive environments.

In contrast to inductive sensors, which detect metallic objects, capacitive sensors can detect almost any material. They are used in the wood, paper, glass, plastic, food, and chemical industries.

### Potentiometer adjustment

The sensors feature a potentiometer that adjusts the sensitivity of the sensor. This feature allows the sensor to be precisely tuned for a specific application.

### Improved noise immunity

Switching power supplies, variable frequency motor drives, and high-powered communication devices are found in most industrial plants. These devices can generate high noise levels contributing to erratic sensor operation.

As a result, ifm's patented "charge balance" circuit design offers reliable noise immunity and enables ifm capacitive sensors to perform effectively in high noise level environments.

### PNP to NPN converter cordset

This cordset converts PNP outputs to NPN outputs.

Part no.: EVC01E (5 meters)  
List price (1-pc): \$19.00

## Top five product features!

- A reliable alternative to mechanical and optical touch sensors using dynamic and static sensing principles
- Ergonomic design allows sensor to be actuated with a single finger or hand
- Robust polycarbonate housing is resistant to impact and wear, rated IP69K
- Dynamic sensing principle ignores build-up on sensing face
- Optical feedback provided by switching status LEDs

## Capacitive touch sensitive sensors for machine start / stop

**NEW!** Machine operators often require simple start / stop control of their plant machinery by simply pushing or pressing a large button. Traditional mechanical start / stop buttons are often used but these devices are susceptible to wear and tear. ifm now introduces the KT Series capacitive touch sensitive sensor that operates using non-contact sensing and solid state circuitry. With this design, the KT touch sensors will respond with simply a single finger or light touch of the hand, providing an ergonomic advantage.

### Designed to provide long-life in application

The KT's robust housing is made of scratch-resistant polycarbonate. The completely sealed device is rated IP69K, prevents oil ingress, and ignores build-up on the sensing face.

### Dynamic and static capacitive sensing principles for reliable operation

ifm offers two types of devices for start / stop control. KT touch sensors utilizing the dynamic capacitive principle detect a hand or finger for actuation. The output signal is actuated for 300 ms. This principle allows the sensor to ignore build up on the sensing face and suppress interference such as water, layers of ice, or particles that can stick to the sensor face. Even if the operator is wearing a glove, the sensor will trigger.

Static touch sensors detect hands and objects for as long as the sensing face is damped. This is particularly useful in two-hand control or anti-tie-down applications. Static touch sensors also work through glass.

### Easy mounting

KT sensors are easily mounted directly to a wall or in other areas with an L-bracket specifically designed to fit the KT. Cover rings in a variety of colors are also available for function association.

Mechanical machine start/stop buttons are susceptible to wear and tear. ifm's KT Series touch sensitive sensors operate without wear because they react to light contact for actuation and therefore provide a long life-in-application.

## Top five product features!

- *Magnetic T-slot sensors offer significant advantages over Reed switch technology*
- *Mounts into any cylinder type – smooth, tie rod, dovetail and integrated profile – using ifm mounting accessories*
- *Quick installation! Sensors mount directly from the top of the cylinder – no need to remove end caps*
- *Excellent repeatability and fast response times enable increased uptime*
- *Unlimited number of switching cycles extends life-in-application*
- *Dual cylinder sensor versions simplify wiring – 2 sensor elements*

## Compact housing, simple mounting

ifm offers miniature T-slot cylinder sensors that easily fit into slot-style cylinders to provide a low-profile mounting. The sensors sit flush against the cylinder slot which prevents physical damage in harsh industrial environments.

### Technology comparison

	Reed	 ifm Solid State	Solid State Advantages
Durability	Low (1-2 M cycles)	High (unlimited cycles)	ifm cylinder sensor has unlimited number of cycles. Typically, a reed switch is replaced many times during the life of a cylinder.
Repeatability	Low	High	Provides excellent repeatability. Mechanical wear in reed switches can cause the switch point to drift.
Response Time	Low	High	Fast response time. Reed switches with slower response times cannot maintain their accuracy in high speed applications.
Sensitivity	Low	High	Can operate reliably with weak magnetic fields. Reed switches require great magnetic strength for sensing.
Temperature Stability	High	High	Extremely stable operating characteristics over a wide temperature range.
Longevity	Low	High	Immunity from long-term effects of magnetic fields. Contacts on reed switches can become permanently magnetized over time.

### NEW! MK dual sensors reduce wiring

Two cylinder sensors per port allows more points and less wiring.

### Mounting comparison

**Conventional sensors:**  
Cable and mounting screw are placed at opposite ends of the housing. If the cable is pulled, the sensor can be dislodged.

**ifm top-loading sensors:**  
Cable and mounting screw are at the same end. If the cable is pulled, the sensor stays put.

See page 50 and 51 for mounting accessories.

**i** How do I determine the right accessory for my cylinder type?

- For smooth body cylinders, measure the outside diameter of the cylinder with a micrometer. Select a fixing strap and adapter.
- For tie-rod and integrated profile cylinders, measure the rod on the cylinder. Select an adapter.

## Top five product features!

- *Magnetic C-slot sensors offer reliable sensing with no moving parts*
- *Fits all standard cylinders with 4 mm diameter C-slots*
- *Quick installation! Sensors easily slide into the top of the cylinder – no need to remove end caps*
- *Excellent repeatability and fast response times enable increased uptime*
- *Unlimited number of switching cycles extends life-in-application*
- *Dual cylinder sensor versions simplify wiring – 2 sensor elements*

## Compact housing, simple mounting

ifm offers miniature C-slot cylinder sensors that are available in flush mount and non-flush mount models. Flush mount sensors are designed for standard C-slot cylinders. Non-flush mount sensors easily slide into small grippers and short stroke cylinders.

### Technology comparison

	Reed	ifm Solid State	Solid State Advantages
Durability	Low (1-2 M cycles)	High (unlimited cycles)	ifm cylinder sensor has unlimited number of cycles. Typically, a reed switch is replaced many times during the life of a cylinder.
Repeatability	Low	High	Provides excellent repeatability. Mechanical wear in reed switches can cause the switch point to drift.
Response Time	Low	High	Fast response time. Reed switches with slower response times cannot maintain their accuracy in high speed applications.
Sensitivity	Low	High	Can operate reliably with weak magnetic fields. Reed switches require great magnetic strength for sensing.
Temperature Stability	High	High	Extremely stable operating characteristics over a wide temperature range.
Longevity	Low	High	Immunity from long-term effects of magnetic fields. Contacts on reed switches can become permanently magnetized over time.

### NEW! MK dual sensors reduce wiring

Two cylinder sensors per port allows more points and less wiring.

### Mounting comparison

**Conventional sensors:**  
Cable and mounting screw are placed at opposite ends of the housing. If the cable is pulled, the sensor can be dislodged.

**ifm top-loading sensors:**  
Cable and mounting screw are at the same end. If the cable is pulled, the sensor stays put.

## Top five product features!

- Industry standard 12 mm diameter housing provides simple mounting
- LEDs indicate power, output and marginal signal for easy installation and maintenance
- Durable metal housing resists mechanical damage
- Adjustable sensitivity enables greater accuracy for reliable target detection
- Alarm output alerts user when signal is marginal due to sensor misalignment or cleaning

## Simplified alignment and maintenance

OF photoelectric sensors include signal strength monitoring capabilities with LED indications that simplify installation, identify fault conditions, and provide output status. The sensor provides predictive maintenance to increase uptime throughout the production process. In applications where dust, dirt or moisture accumulates on the lenses, the OF sensor continuously monitors the strength of the received signal.

### Ease of installation

For quick setup and alignment, the OF sensor will indicate a green LED when mounting is optimal and when power is on.

### Ease of predictive maintenance

Quickly identify fault conditions that can cause downtime in your production process. The strength of the returned signal can be seriously degraded in applications where dust, dirt or moisture accumulates. Under marginal operating conditions, a red LED provides a visual warning.

### Ease of setup

The OF photoelectric has a yellow LED that indicates the status of the sensor output. If an overload or short circuit fault occurs at the sensor output, the yellow LED will flash at a 3 Hz frequency.

## Compact and reliable

Designed for industrial automation applications, the robust OF photoelectric sensor features a metal housing with bright LEDs for simple alignment and fault indication.

## Top five product features!

- Robust photoelectric resists mechanical damage
- Metal M18 mounting threads will not strip – eliminating a common problem with plastic threads
- Long sensing range in a small package offers more application flexibility
- Powerful visible red light source with large spot diameter enables easy alignment and quick setup
- Industry standard M12 connector withstands high torquing and provides easy maintenance

## Durable metal housings with long sensing ranges

ifm's OG Series photoelectrics are stronger and more durable than traditional plastic housings. The sensor's durable metal M18 mounting threads will not strip – a common problem with plastic threads. Its standard M12 connector withstands high torquing and provides quick wiring.

OG sensors are more durable than plastic housings that can wear or break over time.

## Reliable performance regardless of target color

\* The 100 mm sensing range background suppression model is rated for  $\pm 10\%$  of nominal sensing range for all target colors.

## High performance background suppression

The OG background suppression sensor uses diode array technology that enables the sensor to differentiate between the target and the background regardless of background color.

### Technical Specs

Supply voltage: 10...30 VDC  
 No. of wires: 3-wire; Part No. OGS280: 2-wire  
 Maximum load current: 200 mA  
 Voltage drop: <2.5 V  
 Leakage current: Negligible  
 Connector: M12  
 Housing material: Metal alloy, PA, LCP, EPDM  
 Lens material: PMMA  
 Operating temperature: -13...140 °F (-25...60 °C)  
 Protection: IP67

### R&D that delivers solutions

ifm R&D engineers design products that reduce machine downtime, increase productivity and simplify installation.

## Top five product features!

- Robust M18 diameter photoelectric resists mechanical damage
- Simple two-wire 20 - 250 V AC design does not require grounding wire allowing quick installation
- Metal M18 mounting threads will not strip – eliminating a common problem with plastic threads
- Long sensing range in a small package offers more application flexibility
- Powerful visible red light source with large spot diameter enables easy alignment and quick setup

## Robust solution for industrial environments

ifm's OG sensor is designed to provide reliable position detection in harsh industrial applications. The sensor's metal housing is more durable than traditional plastic housings that can wear or break over time.

The product family offers long sensing ranges that increase the distance between the sensor and the target, preventing failures from physical damage. Integrated microprocessor-based electronics offer high performance in the toughest applications.

### Smaller profile AC sensor

The OG sensor occupies less space than a traditional tubular sensor and is ideal for applications with limited mounting space.

OG retro-reflective models contain a polarizing filter that eliminates false triggers from shiny targets.

### Long sensing range

Polarization retro-reflective sensors offer outstanding performance with long sensing ranges. The OG sensor has a 4 meter range with a 50 mm reflector.

Position Sensors							Motion Control	Vision Sensors

## Top five product features!

- 316 stainless steel housing designed and tested to withstand industrial automation applications
- Industry standard 18 mm diameter photoelectric suits a variety of applications
- Extremely long sensing ranges for application flexibility
- Innovative two-pushbutton 'Teach Mode' offers simple adjustment for quick setup
- Flexible mounting bracket system simplifies installation

## Innovative teach mode

ifm's OG M18 tubular sensors are designed to provide reliable position detection in factory automation applications. The sensor's innovative two-pushbutton 'Teach Mode' operation establishes light-on / dark-on programming with a press of a button. This functionality eliminates traditional teach programming that can be complicated and difficult to apply.

The innovative teach method eliminates complex programming. The sensor features one button each for teaching a precise on and off state for the sensor signal. For example:

### OUT-off

Mount and align the sensor in the application. The sensor's visible red light simplifies adjustment. Press the OUT-off (*output off*) button for two seconds.

### OUT-on

Position the object to be detected. Press the OUT-on (*output on*) button. The sensor is now ready for operation.

For precise sensing applications, the background suppression models provide high accuracy. The sensor's microprocessor provides automatic calibration and can differentiate between the target and the background which is ideal for conveying applications.

## Bracket system offers accurate alignment

Innovative mounting brackets offer quick installation and setup. The bracket rotates 360° in each of two axes to achieve the most accurate alignment.

## Top five product features!

- Class 1 laser light source detects small objects and provides visual indication of beam alignment
- 316 stainless steel housing designed and tested to withstand industrial automation applications
- Extremely long sensing ranges for application flexibility
- Innovative two-pushbutton 'Teach Mode' offers simple adjustment for quick setup
- Flexible mounting bracket system simplifies installation

## Class 1 laser sensors detect small parts at long distances

Laser sensors are used where detection of small objects or precise positioning is required. Laser light consists of light waves of a single wavelength, high in energy and power density because the waves are in phase with each other. This results in a tightly focused, almost parallel light beam that can detect very small objects at long ranges.

An important feature of the laser is that the light beam is visible, and during set-up of the sensor, the laser power is increased. This provides a bright light spot clearly visible even in the daylight which aids alignment. ifm efector also offers fine adjustment mounting brackets that allow the laser sensors to be precisely aligned for optimum performance.

The OG Series laser sensors are listed as FDA Class I Laser Products and comply with the international standard IEC60825 and European standard EN60825 which describe the operation of laser sensors.

## Innovative teach mode

The innovative teach mode eliminates complex programming. The sensor features one button each for teaching a precise on and off state for the sensor signal.

## PNP to NPN converter cordset

This cordset converts PNP outputs to NPN outputs.

## Top five product features!

- Industry standard 18 mm diameter photoelectric suits a variety of applications
- Simple two-wire, AC design does not require grounding wire allowing quick installation
- Automatic pushbutton provides easy setup adjustment and simplifies installation
- Electronic lock prevents unauthorized adjustments
- One-piece molded housing is completely sealed against environment

## Robust construction and automatic setup

OG sensors incorporate microprocessor-based electronics in a compact housing that is completely sealed against harsh conditions. The body is molded as a single unit, including the windows for the LEDs and pushbutton. The lens is assembled in the ultrasonically-welded housing.

The microprocessor allows the OG to learn the characteristics of both the target and the background. The sensitivity is automatically calibrated to provide the maximum safety margin. The sensor will also detect marginal operating conditions and provide a warning via a red LED.

The pushbutton can be locked after calibration, reducing maintenance and service calls caused by tampering with the adjustment.

## Mounting versatility

The sensor's 2-wire design simplifies wiring. The sensor's red beam alignment simplifies setup.

## Top five product features!

- The easiest photoelectric you'll ever set
- Directly replaces standard 30 mm mount rectangular photoelectrics
- Mechanically robust, all-metal housing eliminates the need for protective bracket, reducing install cost
- High accuracy background suppression technology eliminates the need for adjustments as target colors change
- Simple bench setup – no power needed

## OI Series photoelectric sensors with M30 mounting and quick setup

**NEW!** ifm's OI photoelectric sensors offer a variety of sensing solutions for the conveying, material handling, packaging and automotive industries. Simple to setup and easy to install, the OI Series photoelectric sensors allow users to set a switchpoint quickly.

### Switchpoint with distance for diffuse sensing

In just three easy steps, the ifm OI sensor is ready to go in your application. No complicated installation instructions to read. No

power is required for simple bench setup. Simply measure the distance from the sensor to the target, adjust the multi-turn potentiometer to the required distance and connect power. It's that easy. The innovative potentiometer lets a user know exactly the switchpoint distance which correlates to the number on the display (#1 = 1 mm; #2 = 200 mm, etc...) The OI provides an accurate linear switchpoint setting that is proportional to the number of turns.

### Direct replacement of 30mm mount rectangular photoelectrics

ifm's OI compact all-metal housing can easily replace standard 30 mm mount rectangular photoelectrics. The sensor's durable housing makes it ideal for harsh automation applications. The housing is so mechanically robust that a protective bracket is not necessary which reduces total install costs in both material and time.

### Reliable performance regardless of target color

The OI background suppression model has a sensing range of up to 800 mm.

## Simple switchpoint setup

1 Measure the distance and align the sensor

2 Adjust the multi-turn potentiometer to the required distance for the target

In just three easy steps the OI sensor is ready to go!

3 Plug in the power & GO!

Turn	Sensing range
1	100 mm
2	200 mm
3	300 mm
4	400 mm
5	500 mm
6	600 mm
7	700 mm
8	800 mm

## Top five product features!

- PMD "time-of-flight" technology enables long sensing ranges up to 2 meters (6.5 ft) and eliminates need for sensors with reflectors
- Simple switch point setting by rotatable setting ring that does not require power for setup
- Reliable background suppression with no false triggers from highly reflective objects such as stainless steel
- Superior optical performance independent of target color
- M30 diameter, Class 2 laser

## OID with easy-turn setup applies "Time-of-Flight" measurement via PMD Technology

**NEW!** The OID Series photoelectric sensors integrate "Time of Flight" sensing principle with PMD technology to provide reliable sensing in industrial automation applications. The advantages of PMD technology include extremely long sensing ranges, reliable background suppression, visible red light spot for setup and high excess gain. The OID's sensing range can reach up to 2 meters.

The switch point can be set easily by turning the rotatable setting ring. A visible red light spot helps to align the sensor. The OID200 will display in inches or centimeters and the OID201 will display in centimeters. The switch point also can be set before installation without the need for power.

The OID Series sensors offer reliable optical performance independent of target color. Whether shiny, matte, dark or light objects, the OID provides superior background suppression.

The OID allows you to select the setpoint in centimeters or inches by turning the rotatable setting ring. No power is required for simple bench setup.

### Time of flight principle

This principle measures a distance based on the time it takes light to travel to an object and back to the receiver.

## Top five product features!

- Robust stainless steel housing withstands target impact that can cause mechanical damage
- Polarized retro-reflective model offers long sensing range – up to 5 m (16 ft.)
- Adjustment potentiometer and visible red light source allow easy alignment and quick setup
- Sensors will not fail when exposed to caustic chemicals and cleaning agents
- Transparent black cover ensures that the sensor's two LEDs are highly visible

## Robust photoelectrics for harsh environments

**NEW!** ifm introduces a new line of robust photoelectrics with stainless steel housings that are designed for a variety of applications found in industrial automation industries. The O6 Series Photoelectric Sensors provide reliable position sensing in harsh environments.

The sensors feature a simple adjustment potentiometer and a visible red light source that sets up the sensor in an application quickly and easily. The potentiometers are double-sealed and, like the lens, are embedded flush to allow for residue-free cleaning. The transparent black cover ensures that the sensor's two LEDs are highly visible even in bright lighting conditions. The coated lens is made of resistant, shatterproof PPSU PMMA plastic. The O6 sensor line is available in diffuse, diffuse with background suppression, polarized retro-reflective and through-beam pairs.

## Top five product features!

- Small package, long range! Compact design is ideal for applications with limited mounting space
- Advanced microprocessor provides powerful signal processing and enables automatic adjustments to maximize safety margin
- Ideal for sensing small components and features 500  $\mu$ s response time for high-speed applications
- Sensor continuously monitors the strength of received signals and provides a visual LED alert under marginal operating conditions
- Programmable light on / dark on for application flexibility

## Compact size and automatic setup

OJ photoelectric sensors use visible LEDs as the light source and measure only 24 x 45 x 11 mm. With switching speeds up to 2000 Hz, the sensors are fast enough to be used in most high-speed applications. A wide variety of mounting brackets allow the OJ to be adapted to most mounting configurations.

An advanced microprocessor provides powerful signal processing and analysis capabilities. This enables the OJ to learn the characteristics of both the target and the background in a specific application.

During initial installation, the automatic calibration will determine the light conditions of both the target-present and target-not-present conditions. The sensitivity of the OJ will then be automatically adjusted so there is a maximum safety margin under each condition.

## Diode array sensing technology

The OJ incorporates diode array technology that enables the sensor to differentiate between the target and the background.

The sensing element contains 63 diode receivers that are placed on an integrated circuit. The array is extremely small allowing it to fit inside the OJ's miniature housing.

## Top five product features!

- Bright red Class 1 laser light source provides visual indication of beam alignment
- Small package, long range! Compact design is ideal for applications with limited mounting space
- Advanced microprocessor provides powerful signal processing and enables automatic adjustments to maximize safety margin in an application
- Sensor continuously monitors the strength of the received signal and provides a visual LED alert under marginal operating conditions
- Programmable light on / dark on for application flexibility

## Differentiates target from background at less than 0.5 mm

High resolution background suppression laser sensors are ideal for precise sensing applications. The sensor can differentiate between the target and the background at less than 0.5 mm. This type of accuracy is critical for assembly automation applications such as part present and inspection. The OJ's collimated laser beam provides the same beam width up to a distance of 200 mm.

An advanced microprocessor provides powerful signal processing and analysis capabilities. This enables the OJ to learn the characteristics of both the target and the background in a specific application.

During initial installation, the automatic calibration will determine the light conditions of both the target-present and target-not-present conditions. The sensitivity of the OJ will then be automatically adjusted so there is a maximum safety margin under each condition.

For application versatility, OJ sensors are available in two lens configurations, side sensing and front sensing.

## Diode array sensing technology

The OJ incorporates diode array technology that enables the sensor to differentiate between the target and the background.

The sensing element contains 63 diode receivers that are placed on an integrated circuit. The array is extremely small allowing it to fit inside the OJ's miniature housing.

## Top five product features!

- Visible red light technology provides precise alignment and simplifies adjustment
- Extremely long sensing ranges – up to 1.8 meters for background suppression models; 10 meters for polarized models
- Innovative two-pushbutton 'Teach mode' simplifies setup
- Protective metal frame withstands mechanical damage in industrial automation applications
- Durable rotating connector rotates 270° and easy-to-use bracket system reduces inventory for cordsets

## Rugged design and versatile mounting

ifm's O5 photoelectric sensors offer extremely long sensing ranges in a small housing. The sensors offer a simple two pushbutton 'Teach Mode' that provides high accuracy and extreme resolution for precise applications.

Actual size

Installation is easy. The sensor's connector rotates 270° for alignment in multiple directions. A variety of brackets are available for versatile mounting.

The O5 sensor can be mounted above its target – up to 1.8 meters for background suppression models.

With its combination of sensing range, compact housing and simple setup, the O5 sensor family is a price / performance benchmark.

## Innovative 'Teach Mode' operation

### Step 1: OUT-off

Mount and align the sensor in the application. The sensor's visible red light simplifies adjustment. Press the OUT-off (output off) button for two seconds.

### Step 2: OUT-on

Position the object to be detected. Press the OUT-on (output on) button. The sensor is now ready for operation.

## Top five product features!

- PMD "time-of-flight" technology enables long sensing ranges up to 2 meters (6.5 ft) and eliminates need for sensors with reflectors
- Plus/minus (+/-) buttons can toggle to set the switchpoints
- Reliable background suppression with no false triggers from highly reflective objects such as stainless steel
- Superior optical performance independent of target color
- Class 2 laser can be mounted to any surface and rotated in any position for application versatility

## O5D with simple setup applies "Time-of-Flight" measurement via PMD Technology

**NEW!** The O5D Series photoelectric sensors integrate "Time of Flight" sensing principle with PMD technology to provide reliable sensing in industrial automation applications. The advantages of PMD technology include extremely long sensing ranges, reliable background suppression, visible red light spot for setup and high excess gain. The O5D's sensing range can reach up to 2 meters.

The switch point can be set easily by using the sensor's display with plus / minus (+/-) buttons that set the switchpoint. A visible red light spot helps to align the sensor and a numeric display shows the distance set. A model is available to display in inches.

The O5D Series sensors offer reliable optical performance independent of target color. Whether shiny, matte, dark or light objects, the O5D provides superior background suppression.

### Application markets

Conveying  
Material handling  
Steel  
Paper  
Automotive  
Wood

*Typical photoelectric sensors have challenges with false reflections from shiny targets such as stretch wrap on a pallet. The PMD "time-of-flight" technology from ifm performs reliably in these applications.*

## Top five product features!

- Photoelectric with long sensing ranges that reach up to 80 meters
- Visible red light technology provides precise alignment and simplifies adjustment
- Innovative two-pushbutton 'teach mode' simplifies setup procedure
- Built-in stainless steel frame protects housing in harsh environments
- Durable rotating connector rotates 270° and easy-to-use bracket system reduces inventory for mounting accessories

## O4 Photoelectrics with 80 meter sensing ranges

Compact O4 Series photoelectric sensors offer extremely long sensing ranges that are ideal for applications including transporting, conveying, inspection and error-proofing. The sensor's extended sensing range enables the sensor to be placed farther away from an application reducing its chance of physical damage. A built-in, stainless steel frame provides additional protection for the sensor.

Flexible mounting with visible red light for alignment

- Visible red light technology simplifies set-up and provides quick mounting.
- The durable connector rotates 270° for alignment in multiple directions. A variety of easy-to-use brackets are available for versatile mounting options.

## Innovative 'Teach Mode' operation

### Step 1: OUT-off

Mount and align the sensor in the application. The sensor's visible red light simplifies adjustment. Press the OUT-off (output off) button for two seconds.

### Step 2: OUT-on

Position the object to be detected. Press the OUT-on (output on) button. The sensor is now ready for operation.

### PNP to NPN converter cordset

This cordset converts PNP outputs to NPN outputs.

## Top five product features!

- Fork and angle sensors with one-piece housing design saves set-up time
- Accurate alignment – no need to align transmitter and receiver
- Robust, metal housing with thru-holes for easy mounting without brackets
- Laser sensors are ideal for detecting very small parts
- Light-on / dark-on mode selectable via rotary switch for application flexibility

## Optical fork and angle sensors offer easy setup and accurate alignment in robust metal housing

ifm's optical fork and angle sensors offer a flexible solution for a broad range of packaging and material handling applications. Unlike traditional thru-beam photoelectric sensor pairs, ifm's fork and angle sensors offer a one-piece, fixed-distance transmitter and receiver design. This design eliminates the time consuming alignment of a transmitter and a receiver.

The sensor's robust metal housing resists distortion that typically occurs with conventional plastic fork sensors. A visible red light beam across the whole width assists in setup. Easy adjustable sensitivity setting is established via a potentiometer. Integrated thru-holes provide simple mounting without brackets.

Fork housings are available with slot widths ranging from 10 mm up to 120 mm. Angle sensors are available in 60 mm and 100 mm widths.

### Application solutions

Gear tooth detection

Part detection on tracks

Part detection on conveyors

Detection of legs on integrated circuits

Transparent film and web edge control

Monitoring of batch height

## Top five product features!

- Right balance of performance, size and price for distance measurement applications
- Photoelectric is ideal for long-range background suppression applications
- Large 4-digit alphanumeric display indicates measured distance
- Multiple setpoints: single switching, dual switching or switching and analog output
- Ignores ambient light up to 100 klx

## Reliable solution for long-range object detection

The harsh effects of manufacturing conditions such as weld slag and chemicals often prevents optical sensors from being used in error-proofing applications. The *efector pmd laser sensor* with background suppression can be placed farther away from the application – and the elements – to accurately locate a small part.

### efector pmd advantage

Background suppression and ultrasonic sensors are lower-cost alternatives for distance measurement but have shorter ranges. Traditional time-of-flight systems offer an improved level of performance but are much higher in cost. The efector pmd sensor combines the advantages of these systems: a 10 meter range at an affordable price.

### New feature

The ifm PMD sensor can now ignore ambient light up to 100 klx. This makes it a perfect sensor for both indoor and outdoor applications.

### 4-digit numeric display

The sensor's 4-digit alphanumeric display precisely indicates the measured distance. Models available with simple teach function or parameter setup via pushbutton.

## Top five product features!

- Contrast and color sensors for error-proofing and object detection
- Sensor uses reliable RGB (red, green, blue) technology to determine ideal color to differentiate target background
- High color contrast sensitivity and resolution
- 18 to 22 mm sensing range for contrast, 15 to 18 mm for color
- Auto-detect for PNP/NPN configuration and "Teach Mode" setup to establish application parameters

## O5 contrast and color photoelectric sensors

ifm's high performance O5 Series Contrast and Color sensors offer a variety of sensing solutions for the packaging, assembly, material handling and printing industries.

The O5 sensors feature a RGB visible light transmission LED that processes through red, green and blue to identify the best contrast color between the target and the background.

### Contrast sensor application solutions

The Contrast Sensor's visible light processes through red, green and blue to identify the best color for contrast.

In this example, the sensor selects blue for the highest contrast color. The sensor's high switching frequency can handle the application's short mark-to-space ratio.

### Color sensor application solutions

**Color verification:** Using the O5's adjustable tolerance, the O5 can accept variations of the same color and reject different colors.

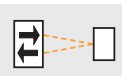

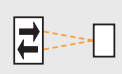

**Orientation:** The O5 detects proper orientation in fast-moving applications.

## Top five product features!

- Detects glass, film, PET bottles and transparent objects
- Simple automatic sensitivity adjustment for reliable detection of clear objects
- Programmable LO / DO for application flexibility
- Thru-hole mounting for an easy, fixed mounting solution
- Multiple bracket options for mounting flexibility

## Reliable clear object detection

OJ sensor uses a reflector to detect plastic bottles on a conveyor.

One of the most difficult photoelectric applications is the detection of clear objects such as film, glass, or PET plastic bottles and transparent packaging. Standard sensors typically have too much excess gain and “burn” through the clear material. ifm efector offers two options for clear object detection applications: the OJ Series sensors and the O5 Series sensor.

### OJ Series sensors – compact housings, long sensing ranges

ifm's OJ Series retroreflective sensor offers a low switching hysteresis specifically for the detection of transparent objects. The sensors incorporate an innovative technology that allows the sensitivity to be automatically set using an easy-to-use teach function. The teach

function eliminates the need to have the product present during initial set up. The technology also reduces the effect of “dead spots” or areas on plastic bottles that cannot be detected when teaching the sensor to read a clear bottle as the target.

### O5 Series sensors - sensing range up to 3 meters

ifm's compact O5 Series polarized retro-reflective sensor offers extremely long sensing ranges – up to 3 meters when used with ifm's prismatic square reflector (Part No. E20454). The high-precision sensor is designed for inspection and error-proofing applications and offers high switching frequency of 2000 Hz for fast moving processes. The unit features a two-pushbutton Teach operation that quickly establishes light-on/dark-on programming. The sensor's micro-processor provides automatic calibration, load detection (PNP or NPN), and switch point adjustment with soiling indication.

O5 Series sensing range reaches up to 3 meters using a prismatic reflector.

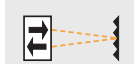

OJ sensors feature front sensing and side sensing models.

## Top five product features!

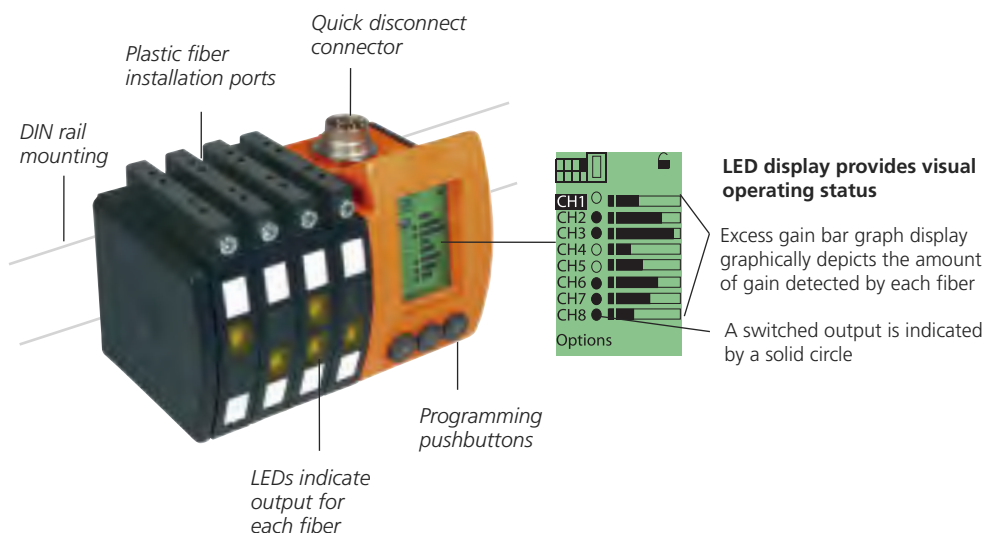

- Multi-channel fiber optic controller with central operating display is designed for applications with multiple sensing points
- Features LCD operator interface that can be used to program multiple fibers and perform AND / OR logic functions
- Available in 2-fiber, 4-fiber, 6-fiber and 8-fiber models
- Individual fibers can be programmed for up to two switchpoints each
- Controller eliminates excessive wiring by using a single cable that replaces individual wiring for each amplifier

## Fiber optic controllers and amplifiers

Fiber optics can be used in applications with limited mounting space or as an alternative to a standard photoelectric sensor. Because the electronics are contained in a separate housing that can be remotely located, only the miniature fiber must be mounted near the target.

### Multi-Channel Fiber Optic Controller reduces wiring

ifm's multi-channel fiber optic controller is designed for applications that require multiple fiber-optic sensing points. The controller eliminates excessive wiring by using a single cable that replaces individual wiring for each amplifier. Depending on the model, up to eight fibers can be connected to one fiber optic controller.

## Top five product features!

- Fiber optic amplifiers for plastic or glass fibers
- Single-fiber amplifiers incorporate transmitter and receiver in one housing
- Automatic pushbutton setup adjustment for quick application setup
- Auto detect circuit for PNP or NPN output
- Provides multiple bright LEDs for signal strength indication

## Fiber optic amplifiers

OBF amplifiers can be mounted in areas with limited mounting space

Fiber optics can be used in applications with limited mounting space or as an alternative to standard photoelectric sensors. Because the electronics are contained in a separate housing that can be remotely located, only the miniature fiber must be mounted near the target.

### OBF amplifiers

The OBF amplifiers incorporate a transmitter and receiver in one housing. A single fiber optic cable is connected to the amplifier and directs light to and from the transmitter and receiver. Fiber optic cables are available in two versions: thru-beam and diffuse reflection.

### Typical applications:

**Confined spaces:** The fiber optic head can be positioned at the sensing location, while the amplifier can be mounted remotely where sufficient space is available. Fiber cables are typically 2-6 feet long to accommodate the distance.

**Detection of minute objects:** Depending on the sensing head and range, objects as small as 0.5mm can be detected. When the placement of the target is precise, it is possible to detect fine structures such as thread pitches.

**High temperatures:** Stainless steel glass fiber optic cables can withstand temperatures up to 600°F

### Powerful amplifier in a compact housing

# Table of Contents – Motion Control

## Speed monitors

Tubular M18 and M30; DC .....	98 - 99
-------------------------------	---------

## Top five product features!

- 18 and 30 mm diameter speed monitors detect under-speed and over-speed conditions
- For rotational speed applications
- 18 mm quick disconnect offers 3-LED status display
- 30 mm units feature easy-to-adjust sensor setpoint
- Time delay eliminates nuisance trips

## Evaluation system for self-contained speed applications

The compact speed monitor is an evaluation system for monitoring rotational speed, particularly over- or under-speed conditions. The sensor and evaluation electronics are integrated into a compact 18 and 30 mm diameter metal housing. The 3-wire version includes a "target-present" LED to simplify set up. The unit senses the speed of the rotating target and provides a digital output when the speed exceeds a customer-programmed set point.

Positioned to sense a bolt head, cam, or other target on a rotating shaft, the DI series speed monitor generates an internal pulse each time the target passes. Counting the pulse train determines if the shaft speed is above or below the set point.

Speed monitors can be used to detect under-speed conditions on spindle applications.

# Table of Contents – Vision Sensors

## Vision sensors

*Vision sensors overview. . . . . 102 - 105*

*efector dualis Contour Sensor compares an object's contour  
for error-proofing applications . . . . . 106 - 107*

*efector dualis Pixel Counter analyzes an area of an object by counting pixels . . . . . 108 - 109*

*Multi-Code Reader identifies data matrix and 1D codes . . . . . 110 - 111*

*3D Image Sensor evaluates shape, size and volume. . . . . 112 - 113*

## efector dualis Contour Sensor provides 100% inspection testing

ifm efector's inspection sensor, efector dualis, monitors a variety of error-proofing applications to provide 100% inspection testing throughout the assembly automation process.

Objects in fast-moving processes are reliably detected and evaluated – regardless of orientation – with the sensor's miniature CMOS-based image processor. High-performance software enables the sensor to find objects with extreme accuracy and speed. The sensor detects and compares defined shapes and provides up to five configurable outputs.

- 100% inspection testing throughout the assembly automation process
- All-in-one design includes an image sensor, evaluation electronics and integrated infrared LED lighting
- Powerful intelligence and 640 x 480 resolution are driven by a smart algorithm
- Compact, industrial-compatible housing measures only 42 x 80 x 53 mm
- An LED display indicates operating status
- Prices start under \$1000.00

### efector dualis Inspection Sensor application examples

#### Confirm bottle cap is sealed correctly

Correct placement

Incorrect placement

**Description:** Using the contour of a bottle cap, the correct placement of a bottle cap is verified.

**Industry:** Food

When the cap is incorrectly sealed, the contour of the cap changes which results in a failed inspection. The Contour Sensor reliably detects the change in the cap's contour.

#### Application solutions:

Right part / wrong part  
Correct orientation  
Missing component  
Object character verification  
Counting  
Sorting  
Logic functions  
Pass / fail

#### Verify the correct position of a punch-out on a steel rod

Correct part

Incorrect part

**Description:** Verifying the correct punch-out position is imperative to the process. If left undetected, an improper crimp or punch-out position on a steel rod would lead to scrap metal.

**Industry:** Stamping

The Contour Sensor detects the outer edges of the rod and uses it as a reference point for the circular punch-out providing reliable results.

## efector dualis Pixel Counter monitors error-proofing applications

ifm's O2V Series efector dualis Pixel Counter sensor solves a variety of inspection and error-proofing applications throughout the manufacturing process. The compact CMOS vision sensor provides reliable performance in production control.

The Pixel Counter analyzes the area of an object by counting the pixels and can identify objects that vary in shape, size or shade. ifm's Pixel Counter features a robust die cast metal housing that is able to withstand the abuse typically found in industrial environments.

- Integrated lighting, evaluation electronics, and image sensor
- On-board lighting element provides correct amount of image brightness
- Powerful algorithm and fast image capture
- Pushbutton setup and 4-digit numeric display
- Easily accessible focus tool quickly defines images
- Easy-to-follow Setup Wizard guides user for quick setup
- Supports Allen-Bradley's Ethernet IP and standard Ethernet TCP products

## efector dualis Inspection Sensor application examples

### Detect registration marks used to identify parts

Mark present

Mark missing

**Description:** A registration mark is used to identify parts that have been through a completed process. Without the mark, the parts go into quarantine, where every unit must be manually sorted. ifm's Pixel Counter is able to identify that the mark is present regardless of the shape or size of the part, eliminating the quarantine process.

**Industry:** Assembly automation

Regardless of shape or size, the Pixel Counter is able to identify that the mark is present.

### Application solutions:

Part verification  
Orientation  
Sortation  
Part / no part  
Pattern matching  
Shape detection  
Object counting and contrast  
Inner/outer radius  
Measurement

### Verify the correct amount of glue for bonding on a joint

Glue present

Glue missing

**Description:** In wood assembly, the right amount of glue must be applied to a joint. Too much glue causes bleeding out of the joint and too little causes improper bonding.

**Industry:** Wood

The Pixel Counter is able to count the amount of white pixels (produced by the glue) to determine the amount of glue on the joint.

## Multi-Code Reader identifies data matrix and 1D codes

Data matrix codes are critical for tracking parts and insuring reliable quality in the manufacturing process. ifm has designed a high-performance, easy-to-use Multi-Code Reader in a compact metal housing for rugged industrial automation applications.

ifm's Multi-Code Reader is designed to read 2D data matrix codes and 1D bar codes in high-speed industrial automation applications. The versatile Multi-Code Reader can identify, verify and qualify most marking methods.

- Easy-to-use reader in a compact, metal housing
- Reads 2D Data Matrix Codes including ECC200, PDF-417 and QR
- Reads 26 different styles of printed 1D barcodes
- Fast code reading and data transfer
- Integrated lighting eliminates need for external lighting
- Identifies most marking methods including dot-peened, laser-etched and printed DMC codes and barcodes
- Priced 50% lower than current technologies

## Multi-Code Reader application example

### Dot-peened codes on highly reflective metal parts

**Challenge:** Dot-peened codes on highly reflective metal parts can be difficult to read due to reflections and code placement.

**Solution:** The camera's internal filters can adjust lighting to increase contrast, and its "Smart Algorithm" reads code in any orientation at angles up to 45°.

### Laser-etched code on glass and solar panels

**Challenge:** Laser-etched code on PVT panels and glass can be difficult to read due to low contrast.

**Solution:** ifm's Multi-Code Reader features integrated lighting, a CMOS image sensor and digital signal processor to identify and read low-contrast codes.

### Application solutions:

- Laser etched code on glass
- Printed code on plastic parts
- Dot-peened code on metal parts
- Laser etched code on solar panels

## 3D Image Sensor evaluates shape, size and volume

ifm's 3D Image Sensor evaluates size, shape and volume in a variety of industrial automation applications. The compact sensor uses time-of-flight distance measurement and photonic mixer device technology to identify an object in the sensor's field of view. An integrated 64 x 48 pixel array – in which each pixel represents a time of flight measurement – defines the field of view for the sensor.

The 3D sensor technology provides critical information in applications such as palletizing and de-palletizing, material handling, bulk level of materials and intelligent routing/sorting.

- The first industrial sensor that can evaluate shape, size and volume
- Uses time-of-flight distance measurement and photonic mixer device technology to identify objects in three dimensions
- Complete sensor element and electronics are built on a 0.25 mm square silicon chip that reduces the size of the sensor and its cost
- Immune to ambient lighting and can be mounted both indoors and outdoors
- Application parameters are quickly established with the sensor's pushbutton setup

## 3D Image Sensor application examples

### Palletizing and de-palletizing

#### Challenge: Incomplete layer

In palletizing and de-palletizing applications, a robotic arm removes bulk material from a conveyor and stacks the material on a pallet. If a stray box is left on a skid and is undetected, the robotic arm could crush the product.

#### ifm Solution: View layer in 3D

The 3D sensor is mounted to the top of the palletizer. The sensor evaluates the entire layer of a pallet and sends an alarm output based on loading errors. Using the 3D data, pallets can be removed without the risk of damage to other pallets.

### Application solutions:

Palletizing and de-palletizing  
Courier and parcel logistics  
Automated storage retrieval systems  
Warehousing and distribution  
Automated guided vehicles  
Bulk material level  
Grains and raw materials in feeders  
Food products on vibratory conveyors

### Bulk material – level

#### Challenge: Level detection to prevent run dry conditions

Currently, multiple sensors are mounted over a bin to detect the level of bulk material. Materials, such as grain or pellets, can shift within the bin creating hills and valleys, leading to incorrect level detection. An empty or "run dry" condition can cause machine downtime, place stress on equipment, and risk damage to components.

#### ifm Solution: Level of materials in 3D

The effector PMD 3D sensor is mounted above a hopper or bin. The sensor's pixel array of 3072 data points spreads across the grain to detect the entire area. The high and low points are identified and can be used for direct output or averaged to provide a more accurate level of available space in the hopper.

## Top five product features!

- Robust design and compact metal housings provide long life and reliability in industrial environments
- CMOS image sensor and Digital Signal Processor with no moving parts provide high performance and durability
- Easy-to-use Setup Wizard guides you step-by-step for simple installation
- Flexible connections with Ethernet interface
- Self-contained unit (internal lighting)

## The inspection sensor for error-proofing applications

efector dualis provides reliable performance in production control. Fast processes or moving objects can be detected and precisely evaluated with the sensor's fast image capture and evaluation.

The sensor is an ideal solution for inspection and error-proofing applications such as right part / wrong part, correct orientation, missing component and object character verification.

### Additional application examples

correct orientation

incorrect orientation

### Feeding technology

Feeder bowls are commonly used to constantly supply an assembly line with small parts. These parts, however, must be in the proper orientation to allow correct assembly.

efector dualis can identify incorrect orientation of parts in a feeder bowl before they are applied.

test passed

test failed

### Object character verification

Even the smallest error, such as a missing date on a milk bottle, can cause large problems in a production line. The efector dualis is ideal for object character verification in a moving production line.

In this example, efector dualis detects a series of preset characters that indicate expiration date. In the following picture, efector dualis detects the missing characters and sends an alarm.

### Built-in intelligence

Independent evaluation: efector dualis includes an image sensor, evaluation electronics and lighting integrated in one robust, industrial compatible housing.

## Top five product features!

- Ideal for inspection and error-proofing applications with irregularly shaped objects
- Reliable inspection testing throughout the production process
- CMOS image element and powerful digital signal processor
- Robust housing for use in industrial environments
- Easy application Setup Wizard offers step-by-step instruction with advanced functionality

### efector dualis Pixel Counter

ifm's O2V Series efector dualis Pixel Counter sensor solves a variety of inspection and error-proofing applications throughout the manufacturing process. The compact CMOS vision sensor provides reliable performance in production control. The Pixel Counter analyzes the area of an object by counting the pixels and can identify objects that vary in shape, size or shade.

The O2V Series Pixel Counter includes an image sensor, evaluation electronics and integrated lighting in a die-cast metal housing that withstands harsh industrial environments. Objects are reliably detected

and precisely evaluated with the sensor's fast image capture and powerful algorithms. The sensor's pushbutton setup and 4-digit numeric display indicates the sensor's output.

An on-board lighting element illuminates the object and provides the correct amount of image brightness at various ranges. An easily accessible focus tool quickly defines images. The sensor features an easy-to-follow Setup Wizard that guides the user for quick setup and supports Allen-Bradley's Ethernet IP and standard Ethernet TCP products.

**NEW!** ifm has expanded its family of Pixel Counters to include infrared versions.

### Additional application examples

Mark present

Mark missing

A mark is used to identify parts that have been through the manufacturing process. Without the mark, the parts go into quarantine, where every unit must be manually sorted.

ifm's Pixel Counter is able to identify that the mark is present regardless of the shape or size of the part, eliminating the quarantine process.

Correct molding

Incorrect molding

A piece of metal is inserted in a rubber mold, and it is imperative that the area is covered smoothly. In this case, while in the molding process, an inconsistent shape formed around the insert.

The molding process can leave an inconsistent shape around the insert. The Pixel Counter inspects for a low level of bright pixels, detecting an incorrect molding.

## Top five product features!

- Robust design and compact metal housing provide long life and reliability in industrial environments
- CMOS image sensor and digital signal processor with no moving parts for durability
- Reliably reads dot-peened, laser-etched and printed data matrix codes as well as printed bar codes
- Configurable four-quadrant lighting improves readability, reduces glare and the need for external lighting
- Easy application Setup Wizard guides you step-by-step with advanced functionality for demanding applications

## Reliable identification of data matrix and 1D codes

The ifm Multi-Code Reader is designed to read 2D data matrix codes and 1D bar codes in high speed industrial automation applications.

The versatile Multi-Code Reader can identify, verify and qualify most marking methods including dot-peened, laser-etched and printed data matrix codes as well as printed barcodes.

The Multi-Code Reader features a maximum speed of 7 meters/second. The unit reads three types of 2D codes: ECC200, PDF-417 and QR as well as 26 styles of printed barcodes.

## A better alternative from ifm

Features	ifm
Robust housing	✓
Reads both 2D and 1D codes	✓
CMOS image sensor	✓
Reads all marking methods	✓
Orientation independent	✓
Configurable quadrant lighting	✓
7 meters/second line speed	✓
Easy Setup Wizard	✓
Switching output for I/O	✓
Ethernet TCP/IP	✓
Price – 50% lower than current technologies	<b>\$918</b>

## Additional application examples

### Laser-etched code on glass and solar panels

**Challenge:** Laser-etched code on PVT panels and glass can be difficult to read due to low contrast.

**Solution:** ifm's Multi-Code Reader features integrated lighting, a CMOS image sensor and digital signal processor to identify and read low-contrast codes.

### Printed code on plastic parts

**Challenge:** Printed code on plastic parts can wear or disintegrate over time.

**Solution:** The Multi-Code camera reliably detects printed codes that become damaged or soiled – even if up to 28% of the information is damaged.

## Top five product features!

- First industrial 3D sensor that evaluates an object's shape, size and volume
- Compact sensor uses reliable time-of-flight distance measurement
- Integrated 64 x 48 pixel array projects 3072 points of reference
- Sensor withstands harsh indoor and outdoor environments
- Provides switching and analog outputs for application versatility

## Photonic Mixer Device (PMD) Technology

The 3D Image Sensor is designed to evaluate size, shape and volume in industrial automation applications.

### Time-of-flight principle

This principle measures a distance based on the time it takes light to travel to an object and back to the receiver.

### Smart pixel

Each pixel has two gates that are controlled by an oscillator. Here, the electrons are converted into photons. The light information is sent from the PMD chip as the representative distance for that pixel, carrying the desired 3D information.

### The PMD pixel array

The integrated 64 x 48 smart pixel array projects 3072 points of reference onto an object, capturing the entire object in three dimensions.

## Additional application examples

### Challenge: Inaccurate bulk material level

In typical level applications, multiple sensors are mounted over a bin to detect the level of bulk

material. Materials, such as grain or pellets, can shift within the bin creating hills and valleys, leading to incorrect level detection.

### ifm Solution: View level in 3D

The 3D image sensor is mounted above a vessel. The sensor's pixel array spreads

across the grain to detect the entire area. The high and low points are identified and can be used for direct output or averaged to provide a more accurate level of available space.

### Challenge: Correct sizing of packages

Determining the gross dimension and volume of a package is crucial to proper traffic flow.

Multiple 2D scanners are typically used to create a 3D image, which adds cost and complexity.

### ifm Solution: View package in 3D

The 3D Image Sensor uses a standard algorithm to determine the gross volume of

a package. The sensor's pixel array sends 3072 time-of-flight measurement points to detect the package size, shape and volume.

### Technical Specs

Sampling rate / sw. frequency:	Max. 20 Hz adjustable
Unambiguous ranges:	6.5 m (single frequency mode)
Current consumption:	Maximum 2500
Short-circuit protection, pulsed:	Yes
Overload protection:	Yes
Operating temperature:	14...122 °F (-10...50 °C)
Protection:	IP67, III
Materials:	Housing: aluminum; lens window: polycarbonate; LED window: PMMA
Connections:	External trigger; max. 2 switching inputs / outputs; analog output (configurable)
Parameter setting options:	Via PC / notebook or 10-segment display and two pushbuttons
Parameter setting interface:	Ethernet 10Base-T / 100Base-TX

Multi-functional safety relays . . . . .	126 - 127
--	-----------

## Safety at Work

Safety at Work overview . . . . .	128 - 129
Safety at Work product offering . . . . .	130 - 131

## Top five product features!

- Fail-safe inductive sensor does not require a special key or coded magnet for a target, reducing installation time and alignment issues
- High tolerance to misalignment and nuisance tripping
- Multi-function safety relay compatible with industry-standard safety devices
- Self-monitoring circuit verifies that the sensor is functioning correctly
- Rated up to SIL 2 or SIL 3 according to IEC 61508

## Non-contact, fail-safe inductive sensors for safety applications

ifm's non-contact fail-safe sensors incorporate inductive technology that detects standard metal target material such as stainless or mild steel. Coded magnets or mechanical keys are not required as targets, greatly reducing installation time and avoiding misalignment issues and nuisance tripping. The sensors continuously monitor the sensing window for target position and dwell time.

ifm's non-contact fail-safe sensors may be used with any standard safety relay, safety PLC and bus system.

### Fail-Safe Sensors for Series Connection (Gx5 Series)

Up to 10 non-contact, fail-safe sensors can be connected in a series with the ifm clocked input versions. Ideal for monitoring multiple stations, such as robotics cells, the fail-safe sensors will provide an output if the one point along chain is stopped. Using ifm's quick disconnect T-piece connectors, wiring is greatly reduced and simplified.

#### Single connection

Safety relay Safety sensor

#### Series connection (up to 10 sensors)

Safety relay Safety sensors

## ifm's fail-safe sensors are a better alternative

Challenge: 2-piece interlocking mechanical switch is prone to misalignment and time-consuming setup

ifm solution: Setup is fast. ifm inductive non-contact fail-safe sensors do not require coded magnets or keys.

ifm's safety relays are ideal for connecting electronic and mechanical fail-safe sensors / switches and for use as two-hand control.

## Top five product features!

- Light curtains designed for finger protection – 14 mm resolution
- Compact 28 x 30 mm housing profile for less intrusive mounting
- Up to 6 meter sensing range with no software required
- Light curtains offer protected heights of 160 mm to 1510 mm in intervals of 150 mm
- **You don't have to compromise the safety level of your machine because of cost... competitive list prices set a new benchmark for value!**

## Safety light curtains help to protect plant personnel

ifm's Type 4 safety light curtains provide an optical solution for protecting plant personnel in unsafe work areas. ifm Type 4 light curtains provide continuous protection, tighter effective aperture range, redundant circuitry and the highest maximum achievable safety level requirements.

### Why choose ifm for your safety products?

- ifm has taken the complexity out of selecting light curtains by offering only Type 4 light curtains.
- Not only does ifm provide the maximum achievable safety for a light curtain, ifm also offers the optimal resolution models for finger, hand and body protection applications.
- ifm's pricing enables Type 4 light curtains to be used in all applications.
- Fewer variations that cover a broad range of applications allows for standardizing on a smaller number of light curtain models.
- ifm has stock available for immediate delivery

**NEW!** ifm safety light curtains provide a multi-beam barrier of infrared light in front of a hazardous area. If any of the beams are blocked by a **finger** in the sensing field, the light curtain sends a signal to the machine to place it in a safe state.

### Woodworking Power Saws

Operators are denied access to power saws any time the saws are in motion. Finger protection safety light curtains allow operators to work in close proximity to power saws without risk of injury.

### Machine tool Hydraulic presses

Presses require large amounts of force and pose a serious safety hazard. ifm safety light curtains will halt the press if an operator gets near the dangerous area.

### Assembly automation SMT (Surface Mount Technology) machine

Light curtains help protect an operator from the hazards associated with material positioning such as mechanical power presses.

Hand protection

## Top five product features!

- Light curtains designed for hand protection – 30 mm resolution
- Highest level of safety protection without increasing cost – Type 4 curtains at a Type 2 price
- Up to 12 meter sensing range with no software required
- Light curtains offer protected heights of 160 mm to 1510 mm in intervals of 150 mm
- **You don't have to compromise the safety level of your machine because of cost... competitive list prices set a new benchmark for value!**

## Safety light curtains help to protect plant personnel

ifm's Type 4 safety light curtains provide an optical solution for protecting plant personnel in unsafe work areas. ifm Type 4 light curtains provide continuous protection, tighter effective aperture range, redundant circuitry and the highest maximum achievable safety level requirements.

### Why choose ifm for your safety products?

- ifm has taken the complexity out of selecting light curtains by offering only Type 4 light curtains.
- Not only does ifm provide the maximum achievable safety for a light curtain, ifm also offers the optimal resolution models for finger, hand and body protection applications.
- ifm's pricing enables Type 4 light curtains to be used in all applications.
- Fewer variations that cover a broad range of applications allows for standardizing on a smaller number of light curtain models.
- ifm has stock available for immediate delivery

**NEW!** ifm safety light curtains provide a multi-beam barrier of infrared light in front of a hazardous area. If any of the beams are blocked by a **hand** in the sensing field, the light curtain sends a signal to the machine to place it in a safe state.

### Vertical automated storage systems

If the operator reaches into the carousel prematurely or accidentally, ifm light curtains will stop the carousel from rotating to prevent injury.

### Carton erecting

Carton machines can jam during the erecting process. Once the operator breaks the protective area of the safety light curtain, the machine stops to allow the operator to clear the jam.

### Semi automated assembly station

Line workers reach into a press to remove the assembly. The press is stopped when an operator reaches inside the machine and breaks the protective field of the light curtain. When the operator has removed the assembly, the machine cycle is automatically restarted, and the light curtains resume operation.

## Top five product features!

- Light curtains designed for body protection – 300, 400 and 500 mm resolution
- Highest level of safety protection without increasing cost – Type 4 curtains at a Type 2 price
- Up to 12 meter sensing range with no software required
- Light curtains offer protected heights of 160 mm to 1510 mm in intervals of 150 mm
- **You don't have to compromise the safety level of your machine because of cost... competitive list prices set a new benchmark for value!**

## Safety light curtains help to protect plant personnel

ifm's Type 4 safety light curtains provide an optical solution for protecting plant personnel in unsafe work areas. ifm Type 4 light curtains provide continuous protection, tighter effective aperture range, redundant circuitry and the highest maximum achievable safety level requirements.

### Why choose ifm for your safety products?

- ifm has taken the complexity out of selecting light curtains by offering only Type 4 light curtains.
- Not only does ifm provide the maximum achievable safety for a light curtain, ifm also offers the optimal resolution models for finger, hand and body protection applications.
- ifm's pricing enables Type 4 light curtains to be used in all applications.
- Fewer variations that cover a broad range of applications allows for standardizing on a smaller number of light curtain models.
- ifm has stock available for immediate delivery

**NEW!** ifm safety light curtains for **body** protection prevent access to a machine by using light curtains and optional mirrors to define a hazardous area.

### Palletizer

A palletizer erects a pallet of kegs and places it on a conveyor. Muting sensors are tripped and the pallet is allowed to bypass the light curtain and leave the area. If an operator

attempts to enter the palletizing area from the opposite direction, the light curtain will detect his presence and cut power to the machine.

### Perimeter guarding of palletizing area

Corner mirrors allow a single pair of safety light curtains to be used in perimeter guarding applications. Up to three corner mirrors may be used to

"bend" the light into shapes that protect multiple sides of the dangerous area. ifm light curtains enable a safe and economical way to replace expensive hard guarding.

Blanking

## Top five product features!

- Light curtains designed for blanking applications – 14 and 20 mm resolution
- Highest level of safety protection without increasing cost – Type 4 curtains at a Type 2 price
- Up to 12 meter sensing range with no software required
- Light curtains offer protected heights of 610 mm to 1210 mm
- **You don't have to compromise the safety level of your machine because of cost... competitive list prices set a new benchmark for value!**

## Safety light curtains help to protect plant personnel

ifm's Type 4 safety light curtains provide an optical solution for protecting plant personnel in unsafe work areas. ifm Type 4 light curtains provide continuous protection, tighter effective aperture range, redundant circuitry and the highest maximum achievable safety level requirements.

### Why choose ifm for your safety products?

- ifm has taken the complexity out of selecting light curtains by offering only Type 4 light curtains.
- Not only does ifm provide the maximum achievable safety for a light curtain, ifm also offers the optimal resolution models for finger, hand and body protection applications.
- ifm's pricing enables Type 4 light curtains to be used in all applications.
- Fewer variations that cover a broad range of applications allows for standardizing on a smaller number of light curtain models.
- ifm has stock available for immediate delivery

**NEW!** **Blanking** allows one, two or three consecutive beams to be broken without interrupting the safety circuit. These types of light curtains are generally used for material feed or exit applications.

### Metal roll feed (floating blanking)

A metal sheet roll is fed into the cutting station. Because of the movement and various feed angles, the metal sheet can break different beams within the

protected area of the light curtain. A floating blanking light curtain allows for one, two or three beams to be broken anywhere within the protected area of the light curtain.

### Conveying transport (permanent blanking)

A light curtain is required for a conveyor section so that operators cannot access the top or bottom of the conveyor. In order to do this, the light

curtain must allow the roller to reside within the protected area without interrupting the safety circuit. By applying the ifm permanent blanking feature, the light curtain can solve this application.

**Reduce your inventory and the complexity of selecting a light curtain**

*ifm's consolidated product offering can be applied in most applications.*

*ifm makes it easy to select a light curtain in three steps. Determine your application (e.g., finger, hand, body, or blanking), determine the protected area height and the protected area width. It's that simple!*

## Top five product features!

- Multi-function safety relays are compatible with a variety of devices including switches, light curtains, e-stops and two-hand controls
- Connects e-stop buttons with cross-fault and optional simultaneous monitoring
- Two safety output versions available: relay or solid-state
- Solid-state auxiliary non-safety output provides feedback to PLC
- Meets requirements of Category 4 PL e and SIL 3 (IEC 61508)

## Multi-function safety relays reduce stock levels

ifm's multi-functional safety relays are compatible with industry standard safety devices. The versatile safety relays connect single or dual channel emergency stops, mechanical safety switches, transistor-based safety devices, light curtains, two-hand controls and ifm's non-contact safety sensors. All of these devices can be monitored with one relay. The benefit is a large reduction in stock levels that eliminates the need for different types of safety relays for various applications. Dual channel safety devices can be configured to monitor simultaneous logic and cross fault detection across the inputs.

### Safety Relays for Series Connection

Up to 10 non-contact, fail-safe sensors can be connected in a series with the ifm clocked input versions. Ideal for monitoring multiple stations, such as robotics cells, the fail-safe sensors will provide an output if the one point along chain is stopped. Using ifm's quick disconnect T-piece connectors, wiring is greatly reduced and simplified.

## Seamless Integration of Safety Components

ifm efector's Safety at Work system connects safety-related components directly to the AS-i network to provide seamless integration into standard PLCs and higher level industrial networks.

Mechanical safety components such as door switches, emergency stop buttons and safety input modules are connected with the AS-i two-wire cable that carries power and signal to each safety device. The system simplifies wiring by eliminating wire bundles that form when connecting numerous input/output devices.

Plug-and-play wiring reduces installation time and eliminates junction boxes and additional input cards. The system provides fast and flexible expansion. Any modifications to the system, such as changing or adding e-stop buttons can be made quickly and easily. Safety zones can be configured and changed through a drag-and-drop configuration software.

The Safety at Work system provides status indication and diagnostic information for each safety device. The system offers increased diagnostic feedback for trouble-shooting and indicates where and when a fault occurs – without the need for additional wires for feedback.

## Simplify Your Safety Wiring

For networking safety components, point-to-point wiring is still the most common wiring method on industrial machines. This type of wiring results in large wire bundles running through the system. Due to the sheer volume of wires, installation time is considerable and troubleshooting is complex.

ifm's Safety at Work system is a simple solution for integrating all of your safety components with one two-wire cable. Its plug-and-play wiring supports all topologies and can be connected to most standard PLCs and higher level networks.

*Conventional point-to-point wiring can be very time consuming and costly*

**ifm's Safety at Work** saves time by eliminating the need to individually wire each safety device back to the main control cabinet.

Visit [www.ifm.com/us](http://www.ifm.com/us) to view all Safety at Work networking products.

**Saves wiring time**  
Safety at Work is plug-and-play. Connect an entire safety system with one cable that carries both data and power. This eliminates the need to individually wire each safety device back to the main control cabinet.

**Simplifies design and build time**  
With less wires to handle, termination points are reduced. The system uses minimal cabinet space and machine drawings are less complex.

**Saves time in disassembly and rebuild**  
Save installation and reduce rebuild-time by days. Equipment can be disassembled and rebuilt faster with Safety at Work's single-cable design.

**Provides diagnostic feedback**  
The Safety at Work system provides increased diagnostic feedback for trouble-shooting. The system indicates where and when a fault occurs without any additional wiring.

**Simple zone control**  
No more wiring changes! Safety zones can be configured easily and changed through a drag-and-drop configuration software.

**Universal connectivity**  
The Safety at Work system can be used directly with most major PLCs including Allen Bradley and Siemens, as well as, DeviceNet, Profibus, and Ethernet bus systems. There are no requirements for special safety PLCs.

**Flexible topology**  
The Safety at Work system can be configured in ring, star, and trunk and drop topologies. The system is also capable of handling multiple safety zones on one network.

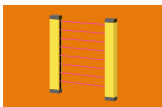

**Implements standard safety devices**  
The system is designed to use standard mechanical safety devices including door switches and e-stop buttons. There are no requirements to use system specific I/O devices.

**Approved technology**  
Complies with the requirements: Type 4 (IEC 61496-1), SIL 3 (IEC 61508), SILcl 3 (IEC 62061) and PL e (EN ISO 13849-1)

**Internationally approved**  
*An international consortium of automation suppliers designed Safety at Work to reduce the cost of connecting widely distributed safety I/O. The Safety at Work system is the first fully-approved industrial safety networking system. The system is rated by TUV for up to SIL 3 according to IEC 61508, IEC 62061, and PL e according to ISO 13849-1. The Safety at Work system uses the internationally accepted AS-i protocol. With over 3 million nodes installed, AS-i has been a major success in automation since 1994.*

## Safety at Work system overview

Safety at Work utilizes the standard AS-i protocol. This provides the backbone for the system to transmit safety-related information. The basis is the transmission of dynamic code sequences (8x4-bit data sequence) which are stored in every safety module. During installation and start-up, the safety monitor must learn these code sequences. While in operation the safety monitor constantly compares the target sequence with the current sequence of the safety module. If the safety module provides a wrong code sequence (e.g. 4x0 bit), the safety monitor switches to the safe state.

**Controllers and Gateways**

Various controller options are available to fit directly to a PLC or connected to higher-level networks such as EtherNet IP, Profibus, etc... A stand-alone option is available that can act as a PLC.

**Power Supplies**

Safety-at-Work power supplies provide power for network modules and input devices. Also, 24 VDC power supplies are used to provide power to output devices over the Safety-at-Work network.

**Safety Relays**

ifm Safety Relays, or Monitors, evaluate the data exchange between the safety modules and the Safety-at-Work controls. If the data transmission is disrupted or a wire-break occurs, the safety relay will fail to safe.

**Input/output modules**

I/O Modules are used to connect standard safety devices such as e-stops, door switches and light curtains to the Safety-at-Work System.

**Guard Locking Door Switches**

AS-i door switches with guard locking have the function to keep moving-equipment safe as long as a dangerous state is present.

**Wiring Solutions**

Various AS-i splitters and branching modules can be used to provide maximum flexibility when designing and commissioning a project.

**Accessories**

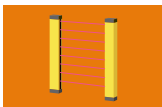

A variety of accessories are available to help connect nodes and periphery devices to the Safety-at-Work system. In addition, products for extending the network, diagnosing faults and addressing modules are also available.

Pressure switches – dual switching outputs with numeric display . . . . .	138 - 139
Pressure switches – switching output with numeric display . . . . .	140 - 141
Pressure transmitters – analog output . . . . .	142 - 143
Pressure transmitters – analog and switching output or dual switching outputs with numeric display . . . . .	144 - 145
Pressure transmitters – analog and switching outputs with gauge display . . . . .	146 - 147
Pressure transmitter – tank level applications – analog output . . . . .	148 - 149

## Flow

Mechatronic flow switch – switching output . . . . .	150 - 151
Thermal flow switches – self-contained housing – switching output with bar graph display . . . . .	152 - 153
Thermal remote flow monitors and probes – switching output with bar graph display . . . . .	154 - 155
Magnetic inductive flow meters – conductive media – configurable flow and temperature output. . . . .	156 - 157
Ultrasonic flow meters – water, glycol and oil – configurable flow and temperature output. . . . .	158 - 159

## Level

Point-level sensors – bulk powders/liquids – pushbutton adjustment, switching output . . . . .	160 - 161
Point-level sensors – bulk powders/liquids – potentiometer adjustment, switching output . . . . .	162 - 163
Point-level sensors – bulk materials/liquids – pushbutton set-up, switching output . . . . .	164 - 165
Point-level sensors – overflow protection – switching output . . . . .	166 - 167
Continuous level sensors – water-based media – analog and switching outputs . . . . .	168 - 169
Continuous level sensors – oils or water-based media – analog and switching outputs . . . . .	170 - 171
Continuous level sensors – oils and coolants – analog and switching outputs . . . . .	172 - 173

## Temperature

Temperature switches – self-contained with integrated RTD, switching output . . . . .	174 - 175
Temperature sensors – self-contained with integrated RTD and display – analog and switching outputs . . . . .	176 - 177
Temperature transmitters – self-contained RTD, analog output . . . . .	178 - 179
Temperature transmitters – self-verifying with integrated RTD – scaleable analog output . . . . .	180 - 181
Temperature transmitters – module connects to any RTD – scaleable analog output . . . . .	182 - 183
Temperature sensors – control monitor connects to modular RTD lengths – analog and switching outputs . . . . .	184 - 185
Pt 100 and Pt 1000 RTDs and accessories . . . . .	186 - 187
Infrared temperature switches – two switching outputs . . . . .	188 - 189

## Top five product features!

- Compact pressure switch for pneumatic applications
- 2-color, 4-digit alpha-numeric display for visual indication of operating status
- Simple pushbutton setup
- Easy installation using integrated mounting holes and accessories
- Flexible outputs available: dual PNP, dual NPN, analog / PNP

## Compact pressure switch for applications in robotics and material handling

ifm's PQ Series pressure switches are designed for pneumatic applications in robotics and material handling. The switches precisely measure the full range of vacuum and pressure typical in these applications.

**NEW!** The PQ Series pressure switch family has been expanded to include versions with analog outputs, (i.e. part numbers PQ3809 and PQ3834).

The technology is based on a piezoresistive measuring element. The silicon measuring cell is unaffected by liquids (e.g. condensed water) and deposits that might occur in the system. The silicon measuring cell guarantees a high overload resistance as well as an accuracy of  $\pm 0.5\%$ .

Application parameters are established using two pushbuttons. The two-color, four-digit display provides system pressure which can be seen from long distances.

## Various mounting options

- Can be fixed to flat surfaces and profiles using the two M4 drill holes on the front.
- Can be fixed to a DIN rail using the robust DIN rail clip.
- Can be fixed to a pipe or air-duct plate.

## Top five product features!

- Simple setup with mechanical adjustment dials that rotate to quickly establish setpoint and resetpoint
- 316 stainless steel process connection and strain gauge technology provide higher reliability than mechanical pressure switches
- Accuracy is consistent across the range reducing the number of ranges required.
- The switch's high accuracy and long-term stability insure the setpoint does not drift
- LEDs provide switching status and power indication

## Mechanical adjustment dials provide simple setup

PK pressure switches feature mechanical adjustment dials that rotate to quickly establish the setpoint and resetpoint. The switch is adjustable without system pressure and supply voltage.

The PK pressure switch is an ideal alternative to mechanical piston pressure switches. The PK switch features a gas-tight measuring cell that reliably detects gas and liquid pressure. The switch withstands aggressive media and detects pressure ranges up to 5800 psi (400 bar).

The PK's compact design is ideal for space saving mounting. Quick electrical connection is made using an industry standard Micro DC connector.

## Simple mounting is plug-and-play

### Electronic PK pressure switch

No moving parts reduces wear and prevents leaks.

### Mechanical piston pressure switch

Piston movement can wear the sealing ring resulting in pressure leaks.

## Top five product features!

- Simple pushbutton setup allows the switch to be adjusted and mounted in less than 5 minutes
- Ceramic pressure sensor element is more reliable than mechanical switches
- Each switch has multiple outputs for flexibility
- Integrated built-in display eliminates the need for a reference gauge
- Stainless steel construction designed to last in harsh environments

## Customer benefits!

**Mechanical pressure switches are not reliable and are time-consuming to install**

1. Mount the switch and connect conduit.

2. Install reference gauge.

3. Apply system pressure.

4. Adjust setpoint and differential.

5. Make electrical connections.

**ifm pressure switches have no moving parts and can be installed in less than five minutes**

1. Program the switch.

2. Install the switch.

3. Make electrical connections.

## Top five product features!

- Simple pushbutton setup allows the switch to be adjusted and mounted in less than 5 minutes
- Ceramic pressure sensor element is more reliable than mechanical switches
- Solid state relay output to switch loads up to 2.5 A
- Integrated built-in display eliminates the need for a reference gauge
- Stainless steel construction designed to last in harsh environments

## Customer benefits!

**Mechanical pressure switches are not reliable and are time-consuming to install**

**ifm pressure switches have no moving parts and can be installed in less than five minutes**

## Top five product features!

- Ceramic sensing element provides high burst / over pressure protection and exceptional reliability
- Robust stainless steel housing
- Repeatability 0.15% of full range
- Ideally suited for hydraulic applications and applications subjected to pressure spikes
- No compromise in performance at a great price

## Compact size fits easily in applications with limited mounting space

The compact PX pressure transmitter provides an analog output for reliable pressure indication. Pressure transmitter output options include 4...20 mA and 0...10 V.

PX pressure transmitters are an ideal alternative to mechanical piston pressure transmitters. The transmitters feature a ceramic measuring cell that reliably detects line pressure and withstands aggressive media.

### Capacitive sensing technology using ceramic measuring cells

The most important element of the capacitive sensing technology is the ceramic pressure measuring cell made of aluminum oxide ( $Al_2O_3$ ).

After assembly, the ceramic cell element resembles a plate capacitor with a reference electrode and measuring electrode placed 10  $\mu m$  apart. The capacitance is inversely proportional to the distance between the electrodes. If the distance changes by a small value because of an increase in pressure applied to the cell, the capacitance changes proportionately. This signal is then processed by a microprocessor.

## Top five product features!

- Simple pushbutton setup allows the sensor to be configured in less than 5 minutes
- Ceramic pressure sensor element is more reliable than mechanical switches
- Each transmitter has multiple outputs including scaleable analog for flexibility
- Integrated 4-digit display eliminates the need for a reference gauge
- Stainless steel construction is designed to last in harsh environments

### PN Series: A switch / transmitter with numeric display

ifm offers the PN Series of pressure and vacuum transmitters for hydraulic and pneumatic applications. Simple pushbutton setup allows the sensor to be parameterized and mounted in less than 5 minutes.

The transmitter's numeric display provides an accurate readout of system pressure and switch setpoints. Vacuum transmitters provide an accurate readout of increases and decreases in vacuum systems. Stainless steel construction enables the sensor to last in harsh environments.

- Ceramic pressure sensor element is more reliable than mechanical switches.
- Integrated built-in display eliminates the need for a reference gauge.

The PN pressure sensor monitors line pressure in a pipe and provides 4-digit numeric indication.

## Top five product features!

- 3-in-1 unit: Transmitter and switch with the advantages of a gauge display
- Gauge display indicates the current operating pressure relative to the overall range
- Pointer does not require damping liquid and is driven by an integrated stepper motor
- Transmitter can be configured in less than 5 minutes using two optical pushbuttons
- Display can be rotated 350 degrees for optimal visibility

### PG transmitter features highly visible gauge with the functionality of a pressure sensor

### High-precision measurement

ifm's PG Series pressure family offers a 3-in-1 solution for pressure applications. The PG is a transmitter, switch and gauge in a light-weight, stainless steel housing.

## Top five product features!

- Pressure compensation via internally vented cable
- 2-wire connection technology with 4...20 mA analog output
- Stainless steel housing rated IP68 for durability and long-term immersion
- Models available with measuring ranges of 100, 240 and 400 inH<sub>2</sub>O
- Good overall accuracy and long-term stability

## Submersible pressure transmitter for liquid level applications

ifm's PS3 Series submersible pressure transmitters indicate liquid level measurement in tanks, containers, sumps, wells and river water.

The two-wire, stainless steel transmitter is inserted directly into the medium and provides a 4...20 mA analog output signal. Its watertight, vented polyurethane cable withstands over 220 pounds of strain.

The transmitter measures liquid level through pressure sensing technology. The weight of the liquid creates pressure on the transmitter's measuring element. As the liquid level changes, the output changes. The transmitter's accuracy of 0.5% of full scale and repeatability of 0.1% contribute to the operational reliability of the transmitter.

Models are available with measuring ranges of 100 inH<sub>2</sub>O, 240 inH<sub>2</sub>O and 400 inH<sub>2</sub>O with a variety of cable lengths.

The combination of analog output signal, two-wire technology and various mounting accessories allow easy integration into existing applications.

## Top five product features!

- Immune to rapid temperature changes of media
- Fast response time 10 ms: great for cycling applications; minimum 10 million switching cycles
- Easy to set: turn dial to desired switchpoint up to 26 gpm
- Can be bench set outside of the process
- DC PNP switching output with LED indication

### ifm mechatronic flow switch

The ifm SBN Series mechatronic flow switch monitors liquid media and provides reliable flow control for various flow applications.

The mechatronic flow switch sensing principle ensures extremely fast response time and allows for a more precise switchpoint setting. The switchpoint can be easily set and locked with a setting screw.

The SBN mechatronic flow switch is ideal for applications with rapid temperature changes or where fast response time is required, such as:

- Spindle coolant flow monitoring for drilling
- Furnace cooling water flow detection
- Cycling coolant flow monitoring in machining applications

#### SBN Principle of operation

The flow sensor utilizes a spring-supported piston that is lifted by the flowing medium. The piston position is detected via an inductive sensor and is output as a binary signal. The spring resets the piston to its initial position with decreasing flow. This allows the sensor to be mounted in any position (horizontally or vertically) and function as a check valve.

The mechatronic sensor reliably monitors the flow of water in cooling loops of an induction furnace.

## Top five product features!

- Thermal sensing principle with no moving parts is more reliable than mechanical switches
- Replaces mechanical switches for monitoring liquids and gases
- Wide measuring range to cover more applications
- LED bar graph display for flow and setpoint
- Easy pushbutton setup with flexible mounting

## ifm's flow switches are an ideal alternative to mechanical flow switches

The SI flow switch features microprocessor-based pushbutton programming and highly visible LED status of flow and output conditions. They are ideally suited to flow / no flow applications in most industries.

ifm effector flow switches offer a variety of process connections to fit most applications. This flexibility

allows the switch to be easily installed in many different applications that have various mounting requirements.

ifm effector flow switches are solid state alternatives to mechanical flow switches for sensing the flow rate of liquids and gases. Because there are no moving parts to jam or break, ifm effector flow switches eliminate the maintenance headaches of mechanical flow switches.

### Challenge

Mechanical flow switches that stick.

### Solution

ifm flow switches have no moving parts that can stick or break.

## How to convert flow rate to flow velocity

1. Find the volumetric flow rate for the switchpoint on the y-axis. (Example: 10).
2. Follow the line horizontally until it intersects the diagonal line for the pipe diameter. (Example: 2").
3. From that intersection point, drop straight down to read the velocity on the x-axis. (Example: 30).

### Ideal switchpoint setting ranges for the following flow models:

**SI 5xxx** (pg 155): 3...100 cm/sec. for water

**SF xxxx** (pg 157): 3...60 cm/sec. for water

If the velocity falls within the ideal switchpoint range (as indicated between the bold lines in the chart: 3...100 cm or 3...60 cm), the switch will be very repeatable. If it does not fall within that range, consider increasing the pipe size or reducing the switchpoint flow rate.

## Top five product features!

- 2-piece monitoring system for remote flow indication
- Sensor connects to variety of control monitors
- Ideal for applications where mounting space is limited
- Reduced inventory via modular mounting adapter system
- High temperature model available

## Direct or remote mount flow monitoring systems offer a modular solution for installation

Remote flow probe connects to a cabinet control monitor.

Field-mount monitors can be direct mounted or remote mounted.

ifm's flow monitoring system is a modular solution for direct or remote indication of fluids and gases. With no moving parts or paddles to stick or break, ifm's flow monitor provides reliable flow detection in a variety of equipment. This modular solution is ideal for environments with limited mounting space or locations that do not permit local installation of the control monitor.

### Cabinet mount control monitor

ifm's cabinet mount control monitor offers easy to access terminal connections and can be wired prior to installing inside the control cabinet. The connection to the flow probe is low voltage and does not require a conduit for protection. The control monitor's LED display provides a visual indication of flow and flow setpoint. Separate LEDs indicate temperature and wire break relay output.

### Field mount control monitor

ifm's field mount control monitor connects to multiple probes and can be used directly at the application or remote mounted. The monitor features pushbutton programming and a bar graph LED display for visual operating status.

## Component guide

Select a control monitor depending on your application. Next, determine an electrical connection, flow probe and process connection.

## Top five product features!

- Magnetic inductive flow technology provides high-precision measurement of all conductive media up to 160 gpm
- Compact, in-line stainless steel housing fits up to 2" pipes
- 4-digit numeric display indicates flow rate, total volume and temperature
- Configurable output: switching, pulse or analog (flow and temperature)
- No compromise in quality – high performance at a great price

## The next generation of magmeters from ifm

**NEW!** ifm's SM Series Magmeter is designed to reliably detect the flow rate of conductive media up to 160 gallons per minute. The stainless steel, mechanically-robust design mounts directly in-line providing a compact, low-profile installation for process control.

A 4-digit numeric display with pushbutton setup simultaneously indicates flow rate, fluid temperature and total volume. Simple to setup and easy to install, the SM is a reliable alternative to traditional flow meters and mechanical flow switches.

The next generation of magmeters from ifm – smaller in size at a great price/performance

The volumetric flow meter monitors a variety of conductive media > 20  $\mu\text{S/cm}$  including

- industrial water
- drinking water
- water-based coolants
- water/glycol mixtures

### Typical applications

- Flow and temperature monitoring through heat exchangers
- Guard welding equipment against loss of cooling water
- Batching applications
- Totalize flow of process water
- Pump run dry protection

## Top five product features!

- Simultaneously monitors flow rate, fluid temperature and totals liquid volume
- Monitors water, glycol and oil up to 50 gpm
- Integrated display with pushbutton setup
- Ultrasonic sensing principle uses no moving parts
- Selectable outputs for switching, totalizer and pulse

## ifm's in-line flow meter provides accurate feedback for your critical flow applications

The SU Ultrasonic Flow meter is designed to simultaneously monitor flow rate, detect fluid temperature and provide a totalizer function for a variety of flow applications. With its compact design, the ultrasonic flow meter is intended for small diameter pipes – 1" or less.

The meter provides a four-digit numeric display of the liquid's flow rate (gal/min or l/min), total quantity accumulated (gallons or liters), and medium temperature (°F or °C). The setpoints are established

through a simple pushbutton setup. The meter can be programmed to provide switching output (flow rate and/or temperature), pulse output (flow volume), or analog output (flow rate or temperature).

### Batching applications

The ultrasonic flow meter has the capability to count the number of gallons of fluid. In addition to the totalizer display, the meter provides a pulse output for each gallon (or liter).

## SU Ultrasonic Flow Meter – Principle of Operation

Ultrasonic technology is based on the differential transit time principle. Sound pulses are alternately emitted and detected with and against the direction of flow using piezoceramic sound transducers. The flow rate is calculated from the difference of the transit time.

## Top five product features!

- Accurate point-level indication of liquids and solids with low dielectric constant (e.g. oils, plastic pellets)
- Two pushbutton teach allows for easy setup and eliminates difficult sensitivity adjustment
- Senses level through mounting well, sight glass, plastic tank or by direct contact with media
- Sensor offers superior immunity to electrical noise
- Broad range of mounting well accessories

## Reliable point-level detection with pushbutton teach function

ifm point-level sensors provide accurate level detection of solid and liquid materials. A ring LED display provides output status indication that is visible from long distances.

### Pushbutton teach function

The KI and KG Series point-level sensors feature a two pushbutton teach function that calibrates the proper setpoint value and simplifies the setup process. The sensor is quickly and easily adjusted for a specific application. The integrated microprocessor automatically balances the sensitivity to provide the safest operating condition.

### Improved noise immunity

ifm's patented "charge balance" circuit design for level sensors offers reliable noise immunity and enables ifm level sensors to perform effectively in high noise level environments.

Plastic materials are now being dried at higher temperatures producing very low moisture content. The resulting materials can cause sensing problems for traditional capacitive level sensors.

ifm's capacitive level sensors incorporate sensing electrodes and patented circuitry to detect low-moisture, low-density materials. Combined, these innovations enable the sensors to perform in today's plastic processing applications.

## Top five product features!

- No moving parts for reliable point-level indication
- Easy setpoint adjustment with multi-turn potentiometer
- Senses level through mounting well, sight glass, plastic tank or by direct contact with media
- Bright LEDs for visual indication of output status
- Broad range of mounting well accessories

## Reliable point-level detection

ifm point-level sensors provide accurate level detection of solid and liquid materials. An LED display provides power, output and marginal signal status indication. LEDs can alert a user if conditions have changed, buildup is occurring, or if more material needs to be delivered.

### Potentiometer adjustment

The sensors feature a potentiometer that adjusts the sensitivity of the sensor. This feature allows the sensor to be precisely tuned for a specific application. These sensors are available in prewired, quick disconnect, and terminal chamber models.

### Improved noise immunity

Switching power supplies, variable frequency motor drives, and high-powered communication devices are found in most industrial plants. These devices can generate high noise levels contributing to erratic sensor operation. As a result, ifm's patented "charge balance" circuit design for level sensors offers reliable noise immunity and enables ifm level sensors to perform effectively in high noise level environments.

The KI and KG sensors detect granulars such as plastic regrind.

Using a mounting well, the sensor detects the level of liquid.

## Simple setup

Point level sensors can be mounted directly to the wall of a tank or with a mounting well.

## Top five product features!

- Detects bulk materials or liquids through non-metallic materials such as plastic and glass
- Sensor offers low-profile mounting – less than 15 mm high – provides same sensing range as traditional 30 mm tubular sensor
- Application parameters are quickly set up with the sensor's pushbuttons, eliminating difficult sensitivity adjustments
- Mounts on a flat surface, sight glass, plastic tube, or bypass pipe using brackets or cable ties
- Several models offer auto detection of PNP or NPN output loads

### KQ Series point-level sensor with simple pushbutton setup

The KQ capacitive point-level sensor offers low-profile mounting for level sensing applications. The sensor detects bulk materials or liquids through non-metallic materials such as plastic and glass. The compact sensor is only 10 mm high and has the same sensing range as a traditional 30mm tubular sensor.

Application parameters are quickly set up with the sensor's pushbuttons. The sensor's teach function eliminates difficult sensitivity adjustments. Several models offer automatic detection of the PNP or NPN output loads. ifm's patented "charge balance" circuit design provides reliable noise immunity and enables the sensor to reliably perform in high noise level environments.

The sensor mounts on a flat surface, sight glass, plastic tube, or bypass pipe using brackets or cable ties. The 3-wire DC sensors are available in three models: 2m cabled, pigtail with M8 connector, and pigtail with M12 connector.

### Detects bulk materials and liquids through non-metallic materials

Detection of liquids on a bypass tube.

## Top five product features!

- Protects against overflow in fluid sensing applications
- Capacitive sensing principle with no moving parts
- Polypropylene housing resistant to most chemicals
- Top-down mounting and simple setup with two pushbuttons
- Available in four lengths with adjustable insertion depths

## New generation of overflow level sensors

The LI Series level sensor offers reliable limit level detection in tanks, indicating high or low level of hydraulic oils and coolants. They may also be used to monitor the minimum level, leakage or overflow of tanks.

The sensor can be used as an independent overflow protection device or with other level sensors for added security against overflow.

The sensor's 16mm diameter probe is inserted directly into the fluid and is highly resistant to aggressive oils and lubricants. Setup and adjustment is easy using the sensor's "output on - output off" pushbutton teach function without removing the sensor from the process.

### Pushbutton setup

The operating concept enables setting and adjustment of the output function via two pushbuttons. Deposits can be suppressed during operation without carrying out a new adjustment.

## Top five product features!

- Ideal for level detection of water-based media in compact tanks
- No moving parts – replaces float switches
- Integrated display with pushbutton setup
- Built-in switching and analog output
- Simple mounting with cut-to-length measuring probe

## High performance at a great value

The **efector gwr** provides all of the advantages of reliable level detection using innovative guided wave radar technology at a very low price. Alternative level solutions may offer a lower price but may not perform in challenging applications.

Mechanical float switches can stick in an application due to deposits. Vibration forks offer slightly better performance, but multiple units are required to detect the level of the medium. Traditional GWR level sensors offer an improved performance, but at a very high price point.

## Easy installation

The **efector gwr** is directly mounted into the tank via a threaded process connection or metal bracket. Power and output are provided with an M12 connector. If needed, the probe can be cut to length by the user.

## Longer probe lengths

The LR Series offers long probe lengths for depths up to 63".

## Top five product features!

- *Modular level sensor is ideal for level detection of oils or water-based media in compact tanks*
- *Stainless steel housing with no moving parts that can stick is an ideal alternative to float switches*
- *Integrated display with pushbutton setup*
- *Built-in switching and analog output*
- *Simple mounting with cut-to-length measuring probe*

### The LR Series level sensor reliably monitors oil-based media

The efector gwr sensor's measuring principle is echo time of flight using guided wave radar technology to detect liquid level in applications such as parts cleaning, coolant monitoring, water treatment and hydraulic power units. This technology enables a strong signal strength and the ability to ignore build up.

The modular system consists of a compact, stainless steel sensor housing with numeric display and pushbutton setup and a cut-to-length stainless steel measuring probe that easily attaches to the sensor housing.

To monitor oil and low-dielectric fluids, a coaxial tube is required for this application. The coaxial tube is an open-ended stainless steel cover that slips over the probe and provides a direct 3/4" NPT (or G3/4 BSPP) process connection. The tube can be cut-to-length and should be the same length as the probe. During operation, the guided wave radar pulse travels down the probe and is contained within the coaxial tube. The tube forces the radar signal back to the sensor head indicating reliable level detection.

With no moving parts, the maintenance-free level sensor does not need routine cleanings and offers a long life-in-application. The units are Micro DC and versions are available with 2 or 4 switch points and a scaleable analog output with a single switchpoint for alarm level detection.

- *Pushbutton setup allows the sensor's parameters to be easily adjusted without removing the sensor from the process*
- *Independent overflow protection*
- *Highly visible numeric display*
- *Models are available with integrated temperature monitoring*

## Replaces mechanical float switches

Fluids that contain particles such as metal chips can cause floats on traditional mechanical level switches to stick. ifm efector's LK level sensor is an electronic "floatless" sensor that accurately detects fluid level without any moving parts. Using ifm's patented capacitive sensing technology, the sensor determines level by measuring the point of dielectric contrast that occurs at the level height.

LK level sensors feature an enhanced software algorithm that scans 16 sensing fields along the length of a probe to determine the point at which the change in dielectric occurs. Upon startup, the sensing fields are evaluated every eight milliseconds to provide precise continuous level indication.

### Replaces up to four binary switches

ifm's LK level sensors are available with 2 or 4 switching outputs, as well as an analog and switching output model. Thus, one level sensor can replace up to four binary switches, reducing wiring, material, and mounting costs.

## Easy mounting

ifm's electronic LK level sensors can be inserted into a tank opening as small as 20 mm in diameter.

## Top five product features!

- Simple setup with rotating adjustment dials that quickly establish setpoint and resetpoint
- Space-saving design with no moving parts that can wear or break
- Bright LEDs indicate switching status and power
- Fast response times (less than 3 seconds)
- One TK switch replaces two mechanical switches

### Compact temperature sensor with 316 stainless steel probe

The compact TK Series temperature switch and its integrated 316 stainless steel RTD probe measure only 4" long and can be directly mounted into a pipe.

Two mechanical setup dials rotate to quickly establish the setpoint and resetpoint temperatures. The switch's high accuracy insures that the setpoint does not drift and calibration is not required. Two bright LEDs indicate switching and operating status.

With no moving parts to stick in the process or break, the ifm TK Series switch maintains high performance and long term stability. A locking device prevents unintentional setpoint changes.

### Quick setup! Rotating setup dials establish parameters

TK temperature switches feature mechanical adjustment dials that rotate to quickly establish the setpoint and resetpoint.

## Top five product features!

- Integrated solution: RTD, display and switching/transmitter output
- One-piece solution is ideal for small pipe mounting
- Stainless steel wetted parts and simple pushbutton setup
- Compatible with wide range of chemicals
- Very fast response on temperature changes (less than 3 seconds)

### Enclosure free, local mounting

ifm's compact TN Series process temperature sensors provide highly accurate temperature indication of fluids. The sensors are self-contained units that feature an integrated control monitor and probe. The sensor's robust stainless steel probe is resistant to aggressive media, withstands shock and vibration and features a rotatable display for system temperature.

These models simplify installation in small pipes where local indication is needed. The monitor's integrated display allows a user to view temperature directly at the process. The robust, stainless steel housing with-

stands harsh conditions and is mounted without the need for an enclosure or control box. With its flexible design, the temperature monitoring system adapts to most applications.

### Pushbutton programming

Using the monitor's microprocessor-based pushbutton setup, users can toggle through a variety of menu items. Two output options are available: models with scaleable analog and switching outputs, and models with dual PNP / NPN outputs. The switching output has an independent setpoint and reset-point that can be programmed as normally open or normally closed.

### Versatile mounting

A rotatable display allows the process temperature to be viewed from any angle.

## Top five product features!

- High accuracy across Pt1000 RTD sensor element
- Fully enclosed and sealed 316 stainless steel construction
- Wide temperature range with quick response time
- Flexible mounting with easy adjustment of insertion depth
- No compromise in quality – high performance at a great price!

## Compact temperature transmitter with excellent response times

The TA series temperature transmitter offers a compact measuring system that can be easily installed with common 1/4" NPT mounting adapters.

The transmitters are available with fixed 4 - 20 mA analog output and measuring ranges of 0...300 °F and 0...100 °C. They feature Pt 1000 RTDs with an accuracy of better than  $\pm 0.7$  °F over the entire range of the transmitter.

With its fast response time of 3 seconds, the TA Series temperature transmitter is an ideal choice for critical temperature monitoring applications.

## More compact and easier to install than head-and-well assemblies

### Challenge

Bulky head-and-well assemblies with open cavities are subject to liquid ingress.

### Solution

ifm's compact temperature transmitter features a zero-leak design that resists liquid ingress.

## Top five product features!

- Transmitter provides long-term, highly accurate temperature indication in a variety of industrial automation applications
- The 2-wire loop powered transmitter is fully programmable and comes in a pre-scaled range of 0...100 °C
- One-piece housing features integrated electronics, process connector and Class "A" RTD probe that are laser-welded and factory calibrated
- Bright, 4-digit LED display indicates measured temperature directly at the instrument for easy verification of proper operation
- 316 stainless steel housing is robust for harsh industrial applications

## TD temperature transmitters are completely assembled, calibrated and ready to install

**NEW!** The TD Series temperature transmitters monitor the temperature of liquids in industrial automation applications. The one-piece housing is made of durable 316 stainless steel to withstand tough environments. The 2-wire loop powered programmable transmitter is pre-scaled for 0...100 °C. A bright, 4-digit LED display is protected with a high performance polymer display window that is resistant to chemicals and high temperatures.

Temperature measurement uses high accuracy Pt1000 class A RTDs (resistive thermal detector). Evaluation electronics are optimized for accuracy over the full working range and calibrated to within 0.5°F. The highly engineered tip design reduces thermal mass and precisely locates the RTD element with a constant position and force. The benefit of the tip design is very fast reaction speeds of 1 second to 50% and 3 seconds to 90% of the temperature change. There is no calibration or matching of the RTD with the transmitter module. The TD comes fully assembled and factory calibrated for the highest degree of reliability. This saves both installation and commissioning time.

### Challenge

Traditional sensors require costly calibration and matching of the transmitter with the RTD probe. The assemblies do not have displays for local indication. The connection head and well assemblies are prone to damage from moisture ingress.

### Solution

The Pt1000 sensor element, evaluation electronics and LED display are calibrated to operate as a system solution for your process monitoring.

The one-piece device eliminates wiring issues and moisture ingress.

### One-piece solution mounts directly in process

The TD temperature transmitter reliably monitors the fluid temperature in many industrial applications.

### Technical Specs

Measuring element	Pt 1000, Class A
Response time T05 / T09	1/3 sec.
Supply voltage	18...32 V DC
Current consumption	< 50 mA
Maximum load	300 Ω
Resolution of display	0.18 °F (0.1 °C)
Accuracy of analog signal	± 0.54 + (0.1 % of measuring span) °F ± 0.3 + (0.19 % of measuring span) °C
Pressure rating	-14.5...2321 psi
Ambient temperature	-13...176 °F (-25...80 °C)
Maximum measuring range	-58...302 °F (-50...150 °C)
Wetted parts	316L stainless steel
Protection rating	IP67 / IP68 / IP69K
Default display units	°C

## Top five product features!

- Compact size with "Lock in Place" M12 connectors
- Plug-and-play connection eliminates wiring errors
- Scaleable and offsetable Pt100 / Pt1000 evaluation with temperature ranges from -58... 572 °F (-50... 300 °C)
- Integrated LED confirms operating status
- Over-molding technology guarantees integrity in harsh environments

## Turns any RTD into a programmable 4...20 mA temperature transmitter

The innovative TP transmitter module with "plug and play" M12 connectors solves the common installation and environmental problems associated with conventional terminal chamber-head transmitters.

Error sources from screw terminals, wiring mistakes, and fluid ingress are eliminated. An integrated LED gives local indication that the transmitter is powered and transmitting.

### Challenge

Bulky traditional head transmitters are costly and are subject to moisture ingress.

### Solution

ifm's compact TP transmitter is rated to withstand liquid ingress and provide reliable temperature indication

### Completely configurable

Compatible with any Pt100 or Pt1000 probe, the TP temperature module verifies the type of RTD and automatically makes the correct settings. Usable with 2, 3, or 4-wire RTDs, the TP can be scaled and offset using ifm's USB interface. With its "overmolded" construction, the TP is suitable for harsh environments allowing for use in almost any application.

## Top five product features!

- Integrated display with switching and transmitter outputs
- Easy direct mounting in tanks
- Display can be remotely mounted with simple 4-wire patchcord
- Enclosure-free housing eliminates problems with moisture ingress
- Directly interfaces with any 2, 3, and 4 wire RTDs

## More compact and easier to install than head-and-well assemblies

The TR Series process temperature monitors provide highly accurate temperature indication of fluids. The monitor's integrated display allows a user to view temperature directly at the process. The robust, stainless steel housing withstands harsh conditions. Programmable in either °F or °C, the highly-visible display can be viewed from a distance which is advantageous in low-lit areas.

### Challenge

Bulky head-and-well assemblies with open cavities are subject to liquid ingress and do not have localized displays.

### Solution

ifm's zero-leak, compact temperature monitor connects to a variety of RTDs and features local numeric display.

### Two monitors available:

- Model TR2432 provides a scaleable analog and switching output.
- Model TR7432 features a dual switching output.
- Both monitors have a temperature range of -40 to 572 °F and interface with 2-, 3- and 4-wire RTDs (Pt 100 or Pt 1000). The compact monitors feature a 4-digit numeric LED display that indicates temperature in 0.1 °F resolution.

## Top five product features!

- A variety of RTD probe lengths offer a wide range of insertion depths
- Various thermowells are available that allow the probe to be removed without shutting down the process
- 316 stainless steel design detect rapid temperature changes and is compatible with a wide range of chemicals
- For a custom temperature monitoring system, RTDs can be used with or without ifm's TR control monitor or TP transmitter module
- Standard M12 connectors allow for a multitude of mounting options

### ifm's modular temperature components allow flexibility in any application

Select an RTD probe and process fitting that will suit your application. Optional thermowells allow the RTD probe to be removed without stopping the process.

#### A Select an RTD probe

ifm stainless steel temperature probes are available in 6 mm, 8.2 mm and 10 mm diameters. Probes are available in varying lengths to suit a wide range of installation depths.

#### B Select a process / compression fitting

Process and compression fittings attach to the probe to provide a secure connection in the process. Models are available in 1/4", 1/2", 3/4" and 1" NPT, G 1/4 and G 1/2 BSPP and weldable adapters.

#### C If needed, select a thermowell

Optional thermowell mounting allows the RTD probe to be removed without stopping process. Thermowells are available in various diameter options and lengths.

### Selection Guide for RTD Probes, Fittings and Thermowells

#### A 6 mm diameter · Pt 100 · M12 connector Integrated 1/2" process connection

## Top five product features!

- *Reliable part-presence detection of hot objects up to 2462 °F (1350 °C) using non-contact long-distance sensing technology*
- *30 mm threaded stainless steel housing designed for harsh environments*
- *Scratch-resistant, optically coated precision lens for minimum sensitivity to scattered light ensures reliability*
- *Easy setup via pushbutton and display on the sensor*
- *Two independent switching outputs*

## Compact infrared temperature switch for detecting objects with temperatures up to 2462 °F

**NEW!** Many industries involve detection of objects that are too hot for the use of standard position sensors, such as in the manufacturing of asphalt, steel, glass, or ceramic products. ifm's TW Series non-contact infrared temperature switch is designed to detect objects ranging in temperature from 122 to 2462 °F (50 to 1350 °C).

The TW switch solves these applications by detecting the infrared radiation emitted by the object and converting it into an output signal. If the temperature detected is above the programmed setpoint the output switches.

### High precision in a robust housing

ifm's TW temperature switch features a compact robust housing. The integrated scratch-resistant precision quartz lens with anti-reflective coating provides minimum sensitivity to scattered light for reliability in extremely harsh environments.

The TW is available with an M12 Micro quick disconnect connector. For mounting restrictions with limited space, fiber optic units are available. A special lens attachment is required in this case.

### Easy setup

The switch provides two independent switching outputs that are easily set using the sensor's pushbuttons and digital display. During operation the display shows the measured value in percent of signal strength.

The TW Series temperature switch can be used to detect a hot steel slab by measuring the infrared radiation intensity emitted from the hot slab on a scale of 0 to 100% and displays that percentage. If the temperature detected is above the programmed setpoint, which is also set as a percentage value, the output switches.

Position Sensors							Motion Control	Vision Sensors

# Table of Contents – Industrial Networks

## AS-i networking

	Industrial network overview . . . . .	192 - 194
	Controllers and gateways . . . . .	195
	AS-i power supplies and cabinet modules . . . . .	196 - 197
	Quick slide field modules and airboxes . . . . .	198 - 199
	Low-profile field modules; cables, adapters, accessories . . . . .	200 - 201

## Power supplies

	Compact 24 VDC power supplies . . . . .	202 - 203
---	---	-----------

The AS-i network connects hundreds of sensors on a single two-wire cable. AS-i I/O modules use quick plug-and-play functionality that simplifies installation.

## Point-to-point wiring vs. AS-i networking

Industrial automation systems require a large amount of control devices. The number of binary actuators and sensors placed on a typical system has grown over the years.

Current methods for wiring include point-to-point connection or bus systems. However, point-to-point wiring results in large wire bundles, and bus systems can be too complex for networking simple binary devices.

As a solution to these challenges, ifm offers the Actuator Sensor interface (AS-i), a simple network for actuators and sensors. AS-i is cost-effective, easy to install, and features modular components that offer design flexibility. AS-i is a complete networking solution for industrial control applications.

### Before

Point-to-point wiring is still the most common wiring method found in industry. One cable from each device results in large wire bundles running through the system. Due to the sheer volume of wires, installation time is considerable and troubleshooting is complex.

### After

AS-i network connects multiple binary devices with only one 2-wire cable, completely eliminating wire bundles. Its simple, plug-and-play wiring supports all topologies and eliminates device profiles and expensive hardware.

## AS-i is a simple solution for networking actuators and sensors

An AS-interface network offers a simple, cost-efficient alternative to conventional cabling at the lowest level of the automation. This network can operate directly in conjunction with an existing PLC or can be linked to a higher-level bus system for low-cost remote I/O. AS-interface is tailored to the needs of devices such as sensors and actuators where low connection cost per node is critical and simplicity is essential.

### Global support for AS-interface

ifm efector engineers are trained on AS-interface and can help design and implement a network on industrial equipment. On-site technical support is available and application assistance is immediate by calling our technical support hotline: 800-441-8246.

### Aggressive product development

ifm is committed to investing in new product development for AS-interface. Our goal is to improve functionality, simplify installation and maintain competitive price points.

Visit [www.ifm.com/us](http://www.ifm.com/us) to view all AS-i networking products.

Position Sensors							Motion Control	Vision Sensors
Company	Inductive	Capacitive	Cylinder position	Photoelectrics and lasers	Distance, color and contrast	Fiber optics	Speed monitors	2D / 3D inspection
								
1 - 7	8 - 43	44 - 47	48 - 53	54 - 83	84 - 89	90 - 95	96 - 99	100 - 113

### A simple 2-wire flat cable

The normal collection of wire bundles are replaced by a single, two-wire flat cable that carries both data and power.

### Insulation displacement

Insulation displacement technology enables fast connection to all devices. The cable is pierced to make the electric connection and features a mechanical profile to properly insure polarity.

### Flexible topology

AS-i supports topologies including open tree, ring, star, and trunk and drop lines to allow maximum design freedom.

### Extremely fast system

Data transfer is fast – less than 10 ms on a fully-loaded system of 248 inputs and 186 outputs.

### Cost effective

Since actuators and sensors are among the least expensive devices on a network, their connecting hardware should be comparable in price. AS-i's price-per-point is one of the best in industry.

### Modular system

AS-i's design flexibility makes it a true plug-and-play networking system. Modular machines can be easily connected with the aid of splitter modules to form a production line.

### Best fit

Actuator and sensor manufacturers developed AS-i for the sole purpose of connecting actuators and sensors. Every component on the network is specially designed to fit these binary devices.

## Industrial Ethernet and AS-i networking offer the best of both worlds

Industrial Ethernet (IE) is commonly applied as the networking protocol for automation and plant control. IE is well known in industry, can carry large packets of data, and is ideal for HMIs, PLCs, drives, and barcode scanners.

For bit-level data such as sensors and actuators – which account for 90% of devices in automation – a lower level I/O network, such as AS-i, is better suited for these devices.

AS-i offers a better alternative to wiring bit-level devices and is an ideal complement to Industrial Ethernet at the I/O level. A single Ethernet IP address can transmit up to 992 I/O points.

AS-i uses quick plug-and-play functionality that simplifies installation in the controls architecture.

### ifm is an AS-interface founding member

ifm efector is one of 11 founding members of the AS-interface Association, established in 1990.

AS-i is a non-profit independent organization that is currently supported by more than 100 vendors worldwide.

# AS-i system overview

All of the components needed to create a complete AS-i system are illustrated in this overview. Because of its flexibility, an AS-i system has unlimited design capabilities. Choose from a variety of masters, I/O modules, power supplies and accessories depending on your current controls platform and application environment.

- 1 AS-i Master / Gateway**  
Controls the data transfer for the AS-i network.
- 2 AS-i Power Supply**  
Couples power and signal together for transmission over the 2-wire flat cable.
- 3 Cabinet Module**  
Designed to be an inexpensive solution for connecting control cabinet I/O to the AS-i network.
- 4 Compact Field Module**  
Designed specifically for harsh environments.
- 5 Quick Slide Field Modules**  
IP67 module features a mounting technology that does not require tools for installation.
- 6 Quick Slide Pneumatic Output Modules**  
4 inputs and 1 or 2 solenoid outputs integrated into one housing.
- 7 Splitter Module**  
Allows for maximum flexibility in both the design and commissioning phases of a project.

## Technical Specifications:

- 62 nodes per master
- 4I/4O maximum per node (248 inputs/248 outputs per master)
- 100 m network length (up to 300 m with repeaters)
- Less than 10 ms scan time on a fully loaded system (62 nodes)

Position Sensors							Motion Control	Vision Sensors
Company	Inductive	Capacitive	Cylinder position	Photoelectrics and lasers	Distance, color and contrast	Fiber optics	Speed monitors	2D / 3D inspection
								
1 - 7	8 - 43	44 - 47	48 - 53	54 - 83	84 - 89	90 - 95	96 - 99	100 - 113

## Controllers and gateways

- AS-i Controllers provide direct connection of AS-i to DeviceNet, EtherNet/IP, and to Profibus
- AS-i Backplane Masters provide connection of AS-i to most PLCs
- Single or dual master options available for application versatility
- User friendly display for setup and diagnostics

## AS-i power supplies

- **New** High efficiency design generates less heat and eliminates external cooling
- Couples and de-couples power and signal for transmission over the network
- Compact housing with DIN rail occupies minimal cabinet space
- Selectable 115 / 230 VAC input voltage with short circuit and overload protection

Type	Dimensions (mm)	Output Current AS-i (A)	Output Voltage AS-i (V)	Nominal Voltage (V)	Efficiency (%)	Part No.	List Price (1-pc.)

## Top five product features!

- Wide input range, single phase 100...240 V AC  $\pm 10\%$
- Robust metal housing or compact plastic housings occupy minimal control cabinet space
- Extra power due to "power boost" design
- Energy-saving efficiencies up to 94% generate less heat and eliminate the need for external cooling
- Short-circuit and overload protection

## Low power loss ensures uptime

**NEW!** ifm's power supplies are designed to provide the voltage supply for sensors, actuators, controllers, and other electronic loads. These new power supplies are compact and lightweight, generating less heat and occupying minimal space in control cabinets. Models operate from a wide input voltage range with short circuit and overload protection, including "no-hiccup" short circuit operation.

ifm's switched-mode power supplies have a typical regulated output voltage of 24 VDC. Between no-load and full-load, they ensure stable supply voltage and operational reliability in case of supply voltage fluctuations. Line voltage fluctuations up to  $\pm 15\%$  as well as line interference can be compensated for and not passed on to the load. They have a high peak current capacity for inductive load switching and do not shut down or fold-back due to the high inrush currents required.

Each power supply undergoes a comprehensive test procedure including high frequency and high current load switching. To further insure reliability, all power supplies are fully burned in at elevated temperatures.

With its "power boost" design, ifm's power supplies provide up to 50% extra power above the rated load for up to 5 seconds. This additional power allows for difficult loads to start, such as motors.

# Table of Contents – Machine condition

**Machine condition**

	<i>Vibration sensors – simple machine condition monitoring – switching and analog outputs . . . . .</i>	<i>206- 207</i>
	<i>Thermal flow meters – compressed air and specialty gases – switching, analog and pulse outputs . . . . .</i>	<i>208 - 209</i>

## Top five product features!

- Easy-to-use sensors make vibration monitoring simple and prevent machine downtime
- Within 5 minutes, the sensors can be ready to monitor most rotating and vibrating equipment
- VKV sensors combine both switching function and transmitter in one small package
- VTV transmitter is IP69K and made of 316L stainless steel for use in harsh environments
- VNB transmitter with display and trend history

## ifm's compact vibration sensors detect changing conditions of machinery to indicate machine damage

In most industrial plants, every piece of equipment has its own vibration level that can change when it experiences unusual operating conditions. These changes can indicate potential machine damage or failure.

ifm's vibration sensors are designed to permanently mount on a machine to continuously monitor the machine's vibration level. By detecting vibration level changes when they first occur, these sensors can prevent equipment from catastrophically failing, reduce secondary damage and eliminate expensive downtime.

The VK, VT and VNB sensors monitor vibration levels on:

- Motors
- Pumps
- Compressors
- Fans
- Centrifuges
- Vibratory feeders

ifm's vibration sensors offer the advantages of high performance vibration monitoring devices for a fraction of the price.

### VK vibration monitor

Transmitter with switching output  
Setpoint via rotatable dials  
Operating status LEDs

### VT vibration monitor

Transmitter with time delay  
Robust 316 stainless steel housing  
Rated IP69K for harsh environments

### NEW!

### VNB vibration monitor with digital display

Display shows real-time vibration level and alarm status  
Memory stores time-stamped trend history  
Easy setup via two pushbuttons; no need for software or a PC

## Top five product features!

- In-line flow meter monitors compressed air systems and specialty gases (Ar, CO<sub>2</sub>, N<sub>2</sub>)
- Monitors air and gas consumption to identify leakage areas and improve energy efficiencies
- Optimizes air and gas usage and improves system performance
- Totalizer function monitors overall compressed air and gas usage in a plant
- Units mounted on integrated pipes ensure easy installation

### compressed air and specialty gas meter

efector Metris monitors compressed air and specialty gases such as argon (Ar), carbon dioxide (CO<sub>2</sub>), and nitrogen (N<sub>2</sub>) to detect leakage areas and improve energy efficiencies. Compressed gases are considered one of the most expensive sources of energy consumption in a plant. By identifying leakage areas, efector Metris can optimize compressed gas usage, improve system performance, and reduce energy costs.

The compact sensor is fitted with an integrated pipe to ensure easy mounting and proper installation depth. The sensor's 4-digit numeric display provides air and gas consumption readings and features

microprocessor-based pushbutton setup. Three display options are available: standard cubic feet per minute, standard cubic feet per hour, and total consumed standard cubic feet. The 24 VDC unit provides switching, analog and pulse output options.

#### Operating principle

efector Metris incorporates two ceramic sensing elements that each contain a thermistor.

As one sensor element is heated, the second element is used as a reference. Power is then altered to the heater to ensure a constant temperature difference (CTD) between the two elements.

With its integrated  
pipe length, efector  
Metris ensures easy  
installation and  
proper mounting  
configuration.

## Top five product features!

- ifm's ecolink cordsets feature "Lock-in-Place" coupling nut that resists high levels of shock and vibration
- Cordsets offer high-flex PUR jacketed cable rated for over 5 million flex cycles
- A special insert design includes a mechanical end stop that prevents damage to viton o-ring from over-tightening
- Right angle black housings feature highly-visible status indication LEDs that can be seen from farther distances

### ecolink M8 DC Pico cordsets

ifm's rugged ecolink cordsets are designed and tested to withstand the harsh conditions in industrial automation applications. The product line meets cULus approval, RoHS standards and is silicon and halogen free. The high-flex PUR jacketed cable is rated to over 5 million flex cycles. ecolink's connection technology meets the M8 standard EN 61076.

Lock-in-Place

High Flex

Protects O-ring

cULus

### Technical Specs

Current rating: 3 A  
 Tightening torque coupling nut: 0.3...0.5 Nm  
 Cable characteristics: 5 million flex cycles  
 Housing / molded body: TPU  
 Coupling nut: Nickel plated brass

Contacts: Gold-plated  
 Sealing ring: Viton  
 Cable: PUR, halogen-free, 22 AWG  
 Approvals: cRUus

## Top five product features!

- Redesigned 3-pin wiring block can be used as input and / or output device
- Reduces installation time and simplifies wiring
- Power and signal LED displays for quick and accurate troubleshooting
- Additional O-ring seal between M12 connector and housing
- Smaller housing for applications with limited mounting space

## M8 wiring block systems offer quick installation and eliminate junction boxes and terminal strips

**NEW!** Eliminate junction boxes and terminal strips and make your wiring plug-and-play. ifm's **ecolink** wiring block systems ensure quick connection in industrial automation applications. Available in 4-port and 8-port configurations.

ifm's newly redesigned wiring blocks offer a higher protection rating (IP68) due to an additional O-ring seal between the M12 connector and housing. The block is manufactured with a smaller, more robust housing for low-profile mounting in applications with tight mounting space. The blocks meet the requirements of Class II protection insulation.

ifm's wiring block systems are vibration and shock resistant. Status indication LEDs indicate power and output at each port location. Dust caps and labels are provided with each port.

### ecolink M8 patchcords ensure reliable connection

In addition to ecolink cordsets, ifm manufactures patchcords with the same reliable features such as "lock-in-place" coupling nuts, mechanical end stops that protect O-rings and stainless steel sleeves that maintain optimum sealing.

Cable lengths range from 0.3 meters to 5 meters.

Patchcord options include:

- straight / straight design
- straight / right angle design
- straight / right angle with status LED

### Wiring block systems:

- 4-port quick disconnect
- 4-port prewired
- 8-port prewired

### Technical Specs

Operating voltage: 10...30 VDC, PNP  
 Housing material: PBT  
 Contacts: Gold plated  
 Receptacle housing: Nickel-plated brass  
 Temperature range: -25...90 °C  
 LEDs: Power, green; output, yellow  
 Cable: PUR  
 Protection rating: IP68

## Top five product features!

- ecolink cordsets feature "Lock-in-Place" coupling nuts that resist high levels of shock and vibration
- Available with high-flex PUR cable rated for over 5 million flex cycles or weld slag resistant cable rated for over 2 million cycles
- Special insert design acts as a mechanical end-stop preventing possible damage to Viton o-ring from over tightening
- Materials of construction tested to withstand harsh conditions and aggressive oils and coolants
- Cordsets feature a broad operating temperature of -25 to 90 °C with cRUus approval

### ecolink M12 Micro DC cordsets

ifm's ecolink M12 cordsets are designed and tested to resist harsh conditions in industrial automation and oils and coolants. The product line meets cRUus approval, RoHS standards and is silicon and halogen free. The high-flex PUR jacketed cable is rated to over 5 million flex cycles. ecolink's connection technology meets the M12 standard EN 61076.

#### High temperature coolant test

Sensors and cordsets are completely submerged in industrial oils and coolants for a prolonged period at a temperature of 176° F.

Following the test, the product's characteristics and zero-leak design are verified for reliable operation.

#### A variety of rugged cordsets to fit most applications

ifm ecolink cordsets are available in a variety of configurations and cable lengths for application versatility. The family includes right angle models with LEDs, standard straight cordsets, standard right angle cordsets and patchcords.

The 316 stainless steel sleeve with sawtooth contour maintains optimum sealing and prevents the cordset from detaching.

## Top five product features!

- Designed to reduce installation time and simplify wiring
- Can be used as an input and / or output device
- Power and signal LED displays for quick and accurate troubleshooting
- Available with single or dual LED outputs
- Dust caps and identification labels available

## ecolink M12 wiring block systems with built-in LEDs for input and output devices

ifm's passive wiring block systems provide a rugged yet simple solution for wire consolidation in applications with a high-density of input or output connections. Wiring block systems can replace junction boxes, terminal strips and will help to prevent wiring mistakes.

When using wiring block systems, devices can be changed in seconds, greatly reducing maintenance costs.

ifm offers a wide selection of patchcords that connect to the wiring block systems.

### Quick connection with ecolink patchcords and blocks

Patchcords are available in cable lengths starting at 0.3 meters up to 5 meters.

\* For 6-port and non-LED versions, visit [www.ifm.com/us](http://www.ifm.com/us)

### Robust wiring blocks withstand harsh environments

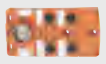

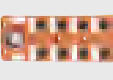

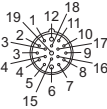

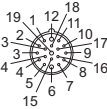

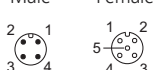

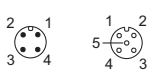

For application versatility, wiring blocks are available in cabled models as well as quick disconnect models that require an M23 quick disconnect cable for electrical connection.

## Top five product features!

- Industry standard color coding
- Vibration resistant coupling nut
- Viton O-ring
- Low-resistance contact design with gold plated contacts
- Available with PVC or TPE cable

## Rugged Micro AC cordsets are designed for industrial automation and metal forming applications

### Why choose PVC or TPE cable material

PVC (polyvinylchloride) offers excellent performance in a wide range of temperatures. PVC cables resist flame, heat, moisture and abrasion. PVC is considered the most commonly used cable jacket material in industrial automation applications.

TPE (thermoplastic elastomer) resists a broad range of oils, chemicals, acids and solvents. TPE is a high flex material and is rated for over 5 million flex cycles. It can be used in continuous flex applications such as robotic arms and grippers.

### Reliable performance

High flex TPE-jacketed cable rated for over 5 million flex cycles.

Broad operating temperature  
PVC: -20 to 80 °C  
TPE: -45 to 105 °C

Materials of construction tested to withstand harsh conditions and aggressive oils and coolants.

UL and CSA approved

### Technical Specs

Nickel plated brass coupling nut  
 Nylon housing – L34101, L34103, E10788, E10789  
 Gold plated contacts  
 22 AWG conductors  
 Maximum conductor size, 18 AWG L34101, L34103, E10788 and E10789  
 Viton O-ring

### Reliable service center

The ifm service center team provides tech support, product quotes, delivery information and order placement.

## We stand behind our products

All ifm efector products are backed with the longest established warranty program in the sensor industry. Products carry either a 5-year or 2-year warranty after date of shipment.

ifm efector warrants that products will be free from defects in materials and workmanship. ifm efector will repair or replace any of these products which are found to be defective and which are returned to us, shipping prepaid, within one year after the defect is discovered.

This warranty is in lieu of and excluding any implied warranty of merchantability or fitness for a particular purpose and this remedy is the exclusive remedy, as ifm efector will not be responsible for any incidental or consequential damages.

### Products with Five-year Limited Warranty:

**Position sensors**  
**Sensors for Motion Control**  
**Safety Technology**  
**Wiring Technology**

### Products with Two-year Limited Warranty:

**Process Sensors**  
**Vision Sensors**  
**Industrial Networks**  
**Identification Systems**  
**Machine Condition Monitoring**  
**Systems for Mobile Machines**

### Concerning safety...

ifm efector makes every effort to build a dependable product, but every product will eventually fail. Therefore, your equipment must be designed to prevent property damage and personal injury if our products fail.

ifm efector products are not designed to be used as stand-alone devices to protect or guard human life or limb.
