Helium Sensor T-Guard for easy Integration into Industrial Leak Testing Systems

INFICON T-Guard™ Leak Detection Sensor delivers the sensitivity and speed helium leak detectors are known for, at a cost similar to pressure decay systems.

It works with simple chambers at atmospheric pressure, so there is no need for costly and complex high vacuum chambers and pumps. That makes automated systems based on T-Guard an attractive alternative to pressure decay and water bath leak detection, providing up to 100 times the sensitivity with low cost of ownership and high ease of use. The measurements are also highly repeatable, even with large, warm or humid test objects.

USER ADVANTAGES

- Helium leak detection at the price of pressure decay
- Up to 100 times more sensitive than pressure decay and 1,000 times more sensitive than water bath systems (10^{-1} to 10^{-6} mbar l/s)
- Works at atmospheric pressure — no need for costly vacuum-tight chamber or high vacuum pump
- Maintenance-free INFICON Wise Technology™, proven in more than 1,000 systems
- Faster than pressure decay
- Simple design maximizes reliability, reduces cost of ownership
- Small and light for easy system integration
- Measures big volumes and objects that are warm, humid or cannot stand vacuum
- Measurements not affected by temperature and humidity
- Multiple measurement modes for flexibility
- Designed for automated systems
- Flexible control by PLC, PC or optional display unit
- Storage of parameter settings for easy data transfer on an optional, attachable I-Stick

TYPICAL APPLICATIONS

- Wherever pressure decay and water bath systems are used or are not sensitive enough
- Leak detection for room air conditioner components and radiators
- Big valves, e.g. for chemical applications
- Manufacturers of automotive gas lines and tanks, small heater coils, etc. that are now demanding greater leak tightness
- Leak detection involving warm, humid or large parts, where the pressure decay method is ineffective
- Other markets where helium vacuum leak detection has been considered too costly or too complex

SPECIFICATIONS	T-GUARD
Minimum detectable leak rate	1 x 10 ⁻⁶ mbar l/s
Measurement range	5 decades
Test chamber pressure	1 atm
Operation modes	2 automatic, 1 advanced
Maximum carrier gas flow	1,000,000 sccm
Probe gas flow FINE / GROSS	180 sccm / 90 sccm
Time constant of the leak rate signal	< 1 s
Helium sensor	Wise Technology™
Run up time	< 3 min
Hose connectors	6 mm
Control inputs	6 x PLC compatible (max. 35 V)
Status / Trigger outputs	8 x relay contacts (max. 60 V DC / 25 V AC / 1 A)
Chart recorder output lin/log	2 x 0-10 V, programmable
Recommended fore pump	two-stage diaphragm
Power supply demand	24 V DC
Typical power consumption	< 100 W
Type of protection	IP40
Dimensions (L x W x H)	258 x 130 x 272 mm; 10.2" x 5.1" x 10.7"
Weight	4.5 kg / 10 lbs
Noise level dB (A)	< 56
ORDERING INFORMATION	PART NUMBER
T-Guard™ Leak Detection Sensor	540-001
Options, Accessories	
Display unit for table-top use	551-100
Display unit for rack installation	551-101
Connecting cable for display unit, 1 m	551-103
Connecting cable for display unit, 5 m	551-102
Set of connecting plugs	551-110
Set of connection hoses	200 002 793
Chamber connector	200 002 615
Set of filters	200 001 680
I/O testbox	200 002 490
Power supply	200 002 800
I-Stick	200 001 997

Modular Leak Detector LDS2010 for System Integration into Industrial Leak Testing Systems

The LDS2010 is a modular helium leak detector for universal integration into industrial leak testing systems. This leak detector was especially designed to speed up industrial leak test processes.

To guarantee a maximum of flexibility in system design the small mass spectrometer and the electronics unit are separate modules. Due to its compact shape the mass spectrometer module can be placed directly at the test chamber of the system. The electronics module that is prepared for a 19" rack can be integrated into the control enclosure of the leak testing system up to ten meters away from the mass spectrometer module.

USER ADVANTAGES

- Very fast signal response time due to a very high helium pumping speed
- No loss of pumping speed caused by long connection tubes between the system and the leak detector, as the small mass spectrometer module can be placed close to the vacuum chamber
- The rugged and reliable high compression turbo pump
 - makes the unit insusceptible for rising helium back-grounds caused by contaminated roughing pumps
 - allows the use of cost -effective single stage roughing pumps.
- Short pumping time due to a high max. inlet pressure (20 mbar)
- Variety of data control and acquisition options via:
 - RS232
 - RS485
 - PLC
 - Profibus compatible with optional converter
 - Lin/log chart recorder
- Rugged mass spectrometer system with dual filament ion source (3 years warranty) ensures high uptime and low maintenance cost
- Switching over from vacuum leak detection to sniffer leak detection allows for immediate pin-pointing of the leak during the same test step
- Calibration via internal calibrated leak; also external or dynamic calibration is possible while pumping down is in progress (faster start-up)

System schematics LDS2010

TYPICAL APPLICATIONS

The flexibility of the LDS2010 makes the instrument ideal for the integration into complex helium leak detection systems.

- Airbag parts
- Evaporators, condensers, compressors
- Valves
- Brake lines, fuel lines
- Hydraulic components
- Engines

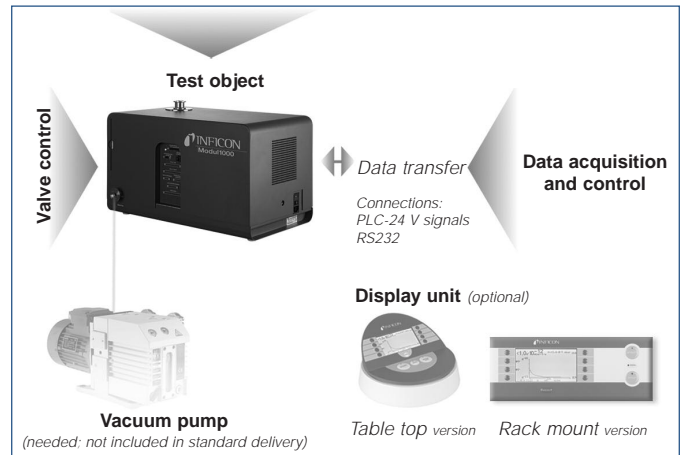

Dimensional drawing of the mass spectrometer module in mm (inch).

SPECIFICATIONS	LDS2010
Minimum detectable leak rate: ULTRA mode FINE mode GROSS mode SNIFFER mode	$\leq 2 \cdot 10^{-11}$ mbar l/s (5 l/s Helium pumping speed) $\leq 2 \cdot 10^{-10}$ mbar l/s (1.7 l/s Helium pumping speed) $\leq 8 \cdot 10^{-8}$ mbar l/s $\leq 5 \cdot 10^{-8}$ mbar l/s
Units of measurement (selectable)	mbar l/s, Pa m ³ /s, atm cc/s, g/a, ppm
Maximum inlet pressure	20 mbar (FINE 3 mbar, ULTRA 0.4 mbar)
Response time	< 1 s
Ion source	2 longlife Iridium filaments, Yttrium-oxide coated
Vacuum connections	DN 16 KF / DN 25 KF
Relays	4
Control inputs	PLC compatible (max. 35 V)
Chart recorder output lin/log	0 - 10 V
Interface	RS232, RS485, and Fieldbus options
Dimensions (L x W x H) Mass spectrometer module Electronics module	348 x 244 x 267 mm (13.7 x 9.6 x 10.5 in.) 482.6 x 359.9 x 134.1 mm (19 x 14.17 x 5.28 in.)

Helium Leak Detector Modul1000

Building up a leak test bench was never easier. The Modul1000 is the world first leak detector that fulfills jobs which are normally done by a PLC. The detector itself provides all necessary valves for a vacuum leak test and controls the complete leak test process from charging the test object with helium until venting of the test chamber.

Modul1000 system schematics

USER ADVANTAGES

- Implemented "Commander" software menu for direct control of test benches and the complete leak test process.
- Easy to operate
- The choice between two different types of optional display units which can be placed away from the main unit for a maximum flexibility in test bench design.
- Low impact for rising helium background and contamination as a consequence of the high compression ratio of the turbo molecular pump
- The high compression turbo molecular pump allows the use of cost-effective single stage roughing pumps.
- Rugged mass spectrometer system with dual filament ion source (3 years warranty) ensures high uptime and low maintenance cost
- Switching over from vacuum leak detection to sniffer leak detection allows for immediate pin-pointing of the leak during the same test step

TYPICAL APPLICATIONS

The Modul1000 was especially designed for the integration into medium automated test benches.

- Evaporators, condensers, compressors
- Valves
- Brake lines, fuel lines
- Hydraulic components
- Engines

Example: Test station with Helium supply.
Implemented "Commander" software menu for direct control of test systems

SPECIFICATIONS	MODUL1000
Minimum detectable leak rate VACUUM mode SNIFFER mode	$< 5 \times 10^{-12}$ mbar l/s $< 5 \times 10^{-8}$ mbar l/s
Maximum inlet pressure	0.4 mbar 3 mbar (Modul1000b)
Operational mode	wide range without crossover (12 decades)
Helium pumping speed at inlet	2.5 l/s 0.1 l/s (Modul1000b)
Ion source	2 longlife Iridium filaments, Yttrium-oxide coated
Start-up time	< 3 minutes
Inlet port / Fore-vacuum port	DN 25 KF
Power supply	100 - 240 V, 50/60 Hz
Control inputs	8 x PLC compatible (max. 35 V)
Status / Valve control / Trigger outputs	9 / 11 / 3 x relay contacts (max. 60 V AC / 25 V DC / 1 A)
Chart recorder output lin/log	2 x 0-10 V, programmable
Recommended fore-vacuum pump	2.5 - 16 m ³ /h, wet or dry
Dimensions (width x depth x height)	535 x 350 x 339 mm (21.1 x 13.8 x 13.4 in)

Calibrated Leaks for System Applications

Manufacturers of helium leak testing systems require calibrated leaks of various sizes with individually adjusted leak rates for the purpose of setting up and calibrating their systems.

Depending on the type of application, these calibrated leaks are either installed in the test sample as a master leak or are installed in the test chamber itself.

INFICON offers calibrated leaks which are capable of meeting the requirements concerning type and required leak rate.

Integral test leak

Calibrated leaks with screw-in sleeve

USER ADVANTAGES

- Customer-specific leak rate
- Simple to operate
- Easy to install
- Ideal installation dimensions
- All calibrated leaks are supplied with a factory certificate indicating their leak rate

TYPICAL APPLICATIONS

- As a master calibrated leak built directly into the test sample
- Directly installed to the test chamber
- Use as a calibrated leak for sniffer applications

CALIBRATED INTEGRAL LEAK WITH HELIUM RESERVOIR

The integral Helium test leak is for use in a vacuum test chamber and is designed for easy filling and refilling by the customer. It is used for

- Calibration of the vacuum system
- Evaluation of the machine factor for the system
- Verification of the test procedure

CALIBRATED LEAK WITH SCREW-IN SLEEVE

Used as a master leak to check the entire helium leak testing system.

Two leak tight test samples are equipped with these calibrated leaks. These will ensure proper separation between passed and rejected parts. To be fitted to the customer's test samples either by a welded joint or the screw-in sleeve is glued in place.

CALIBRATED LEAK WITH PIN TYPE CASING TL4, TL6, TL4-6

TL4 and TL6: Helium calibrated leaks without gas reservoir (capillary type of leak) for sensitivity and signal response time determinations during vacuum leak detection. A purging valve with hose nozzle permits a rapid exchange of the gas in the dead volume.

TL4-6: Helium calibrated leak (capillary leak) for gross leaks with exchangeable helium reservoir, pressure gauge and two manually operated valves. For calibration of leak rate readings and the alignment of helium mass spectrometers in the vacuum pressure range.

ORDERING INFORMATION

CALIBRATED INTERNAL LEAK	MAX. OPERATING PRESSURE	PART NUMBER
Integral test leak	1 bar against vacuum	143 15S
Calibrated leak with screw-in sleeve, Ø 5 mm	20 bar (up to 40 bar if the capillary is glued-in by the customer)	143 00
Calibrated leak with screw-in sleeve, Ø 6 mm	20 bar (up to 40 bar if the capillary is glued-in by the customer)	143 16
CALIBRATED LEAK	LEAK RATE RANGE	PART NUMBER
TL 4, without helium gas reservoir	10^{-4} mbar l/s	155 65
TL 6, without helium gas reservoir	10^{-6} mbar l/s	155 66
TL 4-6, with helium gas reservoir	10^{-4} to 10^{-6} mbar l/s	155 80

Helium Leak Detector UL1000

The mobile UL1000 with a rotary vane pump is an automated leak detector offering fast pumpdown and short response time for quick testing results in industrial systems.

USER ADVANTAGES

- Wide measurement range over 15 decades
- Short pumpdown and response time
- Mobile all metal housing for added convenience with uncompromised maneuverability
- **I-CAL** (Intelligent **C**alculation **A**lgorithm for **L**eak rates) to ensure fastest response time to leaks in all measurement ranges
- Zero function with automatic integration time alignment for fast and reliable test results
- Intelligent vacuum design with rugged roughing pump and multiple inlet turbomolecular pump that provides high helium pumping speed with high compression
- Rotatable display and user interface allows simple and easy control and interaction with the unit
- Self protection features to protect the UL1000 from helium and particle contamination
- Auto purge cycle to ensure clean up and readiness for test
- Software updates via email easily possible
- Rugged mass spectrometer system with 2 filament ion source (3 years warranty) ensures long running time and low maintenance cost
- Built-in test leak for internal calibration to ensure accurate test results
- Built-in software menu “Auto Leak Test” function to perform tests of hermetically sealed components.
By use of the optional test chamber TC1000 (see page 19) this test runs automatically

TYPICAL APPLICATIONS

Leak testing and quality control of all types of components including

- Automotive components
- Refrigeration and air conditioning components and sub-assemblies
- Hermetically sealed electronic devices
- Heat exchangers

Advanced software menu Auto Leak Test

This function controls the test cycle and allows entering of test parameters like

- measuring cycle time
- trigger level
- number of parts tested

The status of the test cycle can always be monitored on the display. The optional test chamber TC1000 (see page 36) turns the UL1000 in a user-friendly workstation for the test of hermetically sealed parts.

The test starts automatically when closing the chamber lid, short cycle times can be achieved (10^{-9} mbar l/s in < 5 sec). The status of the test can always be monitored on the display. After the adjusted cycle time the test stops and the chamber will be vented. A selectable “Standby” mode keeps the chamber under vacuum while discontinuing the leak test. Protective functions prevent helium contamination by big leaker and ensure continuous operation.

SPECIFICATIONS	UL1000
Min. detectable leak rate for helium (Vacuum mode) *)	< 5 x 10 ⁻¹² mbar l/s
Min. detectable leak rate for helium (Sniffer mode) *)	< 5 x 10 ⁻⁸ mbar l/s
Max. detectable leak rate for helium that can be displayed	0.1 mbar l/s
Max. inlet pressure GROSS mode: FINE mode: ULTRA mode:	15 mbar 2 mbar 0.4 mbar
Pumping speed during evacuation	16 m ³ /h (11.2 cfm) at 50 Hz

Dry Helium Leak Detector UL1000 Fab

The mobile UL1000 Fab with its dry vacuum system is an automatic leak detector offering fast pumpdown and short response time to meet the demanding requirements in semiconductor applications.

USER ADVANTAGES

- Wide measurement range over 15 decades
- Short pumpdown and response time
- Mobile all metal housing for added convenience with uncompromised maneuverability
- **I-CAL** (Intelligent Calculation Algorithm for Leak rates) to ensure fastest response time to leaks in all measurement ranges
- Zero function with automatic integration time alignment for fast and reliable test results
- Intelligent vacuum design with rugged scroll pump and multiple inlet turbomolecular pump that provides high helium pumping speed with high compression
- Rotatable display and user interface allows simple and easy control and interaction with the unit
- Self protection features to protect the UL1000 Fab from helium and particle contamination
- Auto purge cycle to ensure clean up and readiness for test
- Software updates via email easily possible
- Rugged mass spectrometer system with 2 filament ion source (3 years warranty) ensures long running time and low maintenance cost
- Built-in test leak for internal calibration to ensure accurate test results
- Built-in software menu “Auto Leak Test” function to perform tests of hermetically sealed components.
By use of the optional test chamber TC1000 (see page 19) this test runs automatically

TYPICAL APPLICATIONS

- Leak testing of
 - Components
 - Chambers
 - Subassemblies
- used on
 - Semiconductor tools
 - Flat display tools
- Leak testing of hermetically sealed electronically devices

Advanced software menu Auto Leak Test

This function controls the test cycle and allows entering of test parameters like

- measuring cycle time
- trigger level
- number of parts tested

The status of the test cycle can always be monitored on the display. The optional test chamber TC1000 (see page 36) turns the UL1000 in a user-friendly workstation for the test of hermetically sealed parts.

The test starts automatically when closing the chamber lid, short cycle times can be achieved (10^{-9} mbar l/s in < 5 sec). The status of the test can always be monitored on the display. After the adjusted cycle time the test stops and the chamber will be vented. A selectable “Standby” mode keeps the chamber under vacuum while discontinuing the leak test. Protective functions prevent helium contamination by big leaker and ensure continuous operation.

Dry Helium Leak Detector UL5000

The mobile UL5000 is designed to meet the most critical and demanding semiconductor applications, providing fast pumpdown time and delivering fast response time.

It is an ideal tool for bigger testing volumes > 50 l volume.

USER ADVANTAGES

- Wide measurement range over 15 decades
- Short pumpdown and response time
- Mobile all metal housing for added convenience with uncompromised maneuverability
- Software algorithm **HYDRO-S** (**HYDRO**gen-Suppression) to enable test conditions to be reached quickly
- **I-CAL** (Intelligent **C**alculation **A**lgorithm for **L**eak rates) to ensure fastest response time to leaks in all measurement ranges
- Zero function with automatic integration time alignment for fast and reliable test results
- Intelligent vacuum design with rugged Scroll pump and multiple inlet turbomolecular pump that provides high helium pumping speed with high compression
- Rotatable display and user interface allows simple and easy control and interaction with the unit
- Self protection features to protect the UL5000 from helium and particle contamination
- Auto purge cycle to ensure clean up and readiness for test
- Software updates via email easy possible
- New workstation design with optimal height work surface that includes an ESD mat and a lockable tool box
- Rugged mass spectrometer system with 2 filament ion source (3 years warranty) ensures long running time and low maintenance cost
- Built-in test leak for internal calibration to ensure accurate test results

TYPICAL APPLICATIONS

Leak testing of

- Components
- Bigger chambers (> 50 l volume)
- Subassemblies

used on

- Semiconductor tools
- Flat display tools

Accessories for Vacuum Leak Detectors

HELIUM SNIFFER LINE SL200 FOR THE UL1000/5000 AND MODUL1000

Helium sniffers in connection with the UL1000, UL5000 and the Modul1000 leak detectors are used for leak testing test samples which are pressurized with Helium.

Besides pinpointing the leaks, it is possible to determine the leak rate of the escaping helium.

- Sniffer line connects directly to the inlet port
- Very fast response time < 1 sec
- Extremely low detection limit < 1×10^{-7} mbar l/s
- Rigid 120 mm sniffer tip (included)
- Connecting flange DN 25 KF

Helium sniffer line SL 200 P

HELIUM SNIFFERS QUICK-TEST QT100 FOR THE UL1000/5000, AND THE MODUL1000

- For greater distances up to 20 m between test object and leak detector
- Diaphragm pump for sucking the search gas
- Minimum detectable leak rate 1×10^{-6} mbar l/s
- Short response and decay times: 1 sec at 5 m, 8 sec at 20 m
- High sniffer velocity
- Built-in transformer for adaptation to any required power supply voltage 110-230 V AC

TEST CHAMBER TC1000 FOR THE UL1000/UL1000 FAB AND MODUL1000

- Turns the UL1000 / UL1000 FAB and the Modul1000 into a reliable and user-friendly workstation for testing of hermetically sealed parts (also according to MIL-STD 843, Method 1014)
- Easy to install
- Maintenance-free
- Volume (hemispherical shape): approx. 430 ccm
- Upper diameter / depth: 130 / 40 mm
- Material: Aluminum alloy, low outgasing rate
- Weight: 2.5 kg
- Vacuum connection: DN 25 KF
- Integrated sensor switch to start test in combination with UL1000 / UL1000 Fab and the Modul1000
- Clearly visible red/green LED's to display test results
- Calibration by an external test leak easy possible by using an optional adapter plate
- Protection of tested parts against static discharge by the standard ESD wrist band and an optional ESD mat (Cat. No. 551-002) for UL1000 / UL1000 Fab

Calibrated Test Leaks with Gas Reservoir for Vacuum Applications

TL7

Capillary leak with helium reservoir and manual valve.
Leak rate range 10^{-7} mbar l/s. Connecting flange DN 10 KF.

TL8 / TL9

Helium test leak with helium reservoir and manual valve.
A special quartz bulb with a high helium permeation rate adjusts the constant gas flow. Connecting flange DN 10 KF.

USER ADVANTAGES

- Inured to pollution
- Metal-free flow reduction for low temperature dependence
- Inspection certificate (included) in accordance to DIN EN 10204:2004-3.1
- Highly accurate and reliable
- Determination of the nominal leak rate by comparison with a calibrated leak having a PTB certificate
- DKD certificate (optional) traceable to PTB

Helium Sniffer Leak Detector

Protec P3000(XL)

INFICON Protec P3000 and Protec P3000XL Helium Sniffer Leak Detectors are specifically designed for full-time sniffing applications in demanding production environments.

The Protec P3000(XL) brings increased levels of productivity and reliability to the sub-assembly and midproduction testing of refrigerators, freezers, air conditioners, automotive air conditioners, RAC components and similar products. Numerous features make it easy and comfortable to use, while making it more immune to careless or untrained operation. It is also fast to make the best use of your available cycle time. Protec P3000(XL) uses innovative INFICON Wise Technology in this robust, reliable and maintenance-free sensor. The Wise Technology sensor combined with the unique design and ruggedness of the leak detector, provides a very low cost of ownership and high up-time.

USER ADVANTAGES

- Improved system design compensates for operator error reducing the potential for missed leaks.
- Protec P3000 provides the minimum detectable leak rate on the market.
- Protec P3000XL is unique for detecting leaks at a considerable distance.
- A small display in the ergonomically-designed probe handle shows the leak rate, so the operator can concentrate on the sniffing process and monitoring the leak rate at the same time.
- Built-in illumination source of the probe helps precisely position the sniffer tip.
- Multiple alarm functions make sure alarms cannot be overlooked.
- Built-in PRO-Check reference leak allows for easy and fast calibration at the production line at any time.
- I-Guide mode ensures your operator is testing the right locations with the correct technique.
- Leak rates can be displayed in refrigerant equivalents from a gas library.
- New, low-maintenance sensor yields high reliability and low cost of ownership.
- Automatic standby prevents intake of contaminants into the sniffer probe, thus saving filter and sensor life.
- Operating software is available in many languages.

TYPICAL APPLICATIONS

The Protec P3000 is ideal for all helium sniffing applications of pressurized components that need to be leak tested.

- Refrigerating / air conditioning industries
 - Evaporators
 - Condensers
 - Valves
 - Compressors
 - Testing of pre-assembled air condition systems before filling with refrigerant
 - Testing of pre-assembled refrigerators and freezers before filling with refrigerant
 - Testing of pre-assembled heat pump systems before filling with refrigerant
- Automotive industry
 - Brake lines
 - Fuel lines
 - Hydraulic components
 - Engines
 - Testing of pre-assembled air conditioning systems before filling with refrigerant

Multi-Gas Sniffer Leak Detector Ecotec E3000

The Ecotec E3000 leak detector brings new levels of productivity and reliability to the final testing of refrigerators, freezers, automotive air conditioners and similar products. It is specifically designed for demanding production environments. Numerous features make it easy and comfortable to use while making it more immune to careless operation and minimizing operator errors. It is also fast to make the best use of your available cycle time. Innovative design and robustness keep the cost of ownership down and ensure very high up-time.

USER ADVANTAGES

- Improved system design compensates for poor sniffing operation reducing the potential for missed leaks
- IGS (Interfering Gas Suppression) ensures only leaks are detected
- Built-in illumination source on the probe helps precisely position the sniffer tip
- Unit can be operated via the probe display and probe buttons without access to the main unit
- Built-in ECO-Check reference leak allows for easy and fast calibration at the production line at any time
- Multiple alarm functions make sure alarms cannot be overlooked
- I-Guide (operator guiding mode) ensures your operator tests the right locations with the right technique
- Ergonomic probe design allows for easy and comfortable use
- Operating software is available in many languages

TYPICAL APPLICATIONS

- Refrigerators and freezers
- Transportation refrigeration
- Cooling and refrigeration systems
- Air conditioning units
- Water coolers
- Compressors and evaporators
- Halogen lamps
- Gas panels

Multi-Gas Leak Detector Ecotec E3000A

The Ecotec E3000A multi-gas leak detector is the reliable and low-cost solution for testing cooling circuits in airplanes. Simpler and measurably faster than conventional leak-testing methods, the Ecotec E3000A does not require evacuation. It simply “sniffs” for refrigerant leaks while the system is in use, reducing downtime and waste.

It comes with a library of more than 100 detectable gases including all refrigerants and heat transfer fluids used in Airbus airplanes as well as many other commonly used gases.

The Ecotec E3000A is officially recommended for use in the A340 (for more information see AMM A340 chapter 25) and the next-generation A380 (AMM A380 chapter 21).

USER ADVANTAGES

- Improved system design compensates for poor sniffing operation reducing the potential for missed leaks
- Built-in, adjustable illumination helps operators precisely position the tip even in tight compartments where light is limited
- Simpler and measurably faster than conventional testing methods
- Does not require evacuation
- Less downtime for airplanes
- Fewer instances where food cannot be served because of refrigeration issues, resulting in better customer service
- Pinpoints the exact location of the leak
- Detected leak rate can be read from the probe display as numerical value
- Can detect up to four different gases at the same time
- Wheeled transportation case that holds all accessories to be easily hauled around the airplane
- Recommended in AMM A340, Chapter 25 and AMM A380, Chapter 21

TYPICAL APPLICATIONS

Leak testing of

- Galley systems
- Transfer lines
- Main chiller system
- Air conditioning system
- Fire extinguishing system

Refrigerant Sniffer Leak Detector HLD5000

The HLD5000 refrigerant leak detector uses an innovative technology to find leaks quickly and reliably with dramatically fewer false alarms.

With its IR sensor it is designed to only detect refrigerant leaks. It reliably suppresses any signals caused by other gases present in the atmosphere. Numerous other features enhance the units convenience, reliability and durability. A selection of probes for single gases as well as a universal probe for all halogen-based refrigerants is available.

The present HLD5000 is the best leak detector in its class.

USER ADVANTAGES

Highly reliable detection of leaks

- No false alarms due to background compensation by dual inlet technology
- No cross sensitivity to non-halogens (water, breath, etc)
- No undetected leaks due to undetected malfunctioning of the leak detector as functionality is constantly monitored
- Short response time for fast use

Universal base unit for high flexibility

- Universal base unit with different probes
- Selection of different probes for single refrigerants including non-halogens (CO₂, SF₆)
- Universal probe for all halogen-based refrigerants
- Unit can be switched over by simply connecting a different sniffer line

Easy to operate

- ATM-like display
- Visual (probe and base unit) and acoustic alarm
- Integrated test leak for easy and traceable calibration at the line as well as regular verification of the calibration
- May be used in automated testing systems with digital processing of test data via RS232 interface

Low cost of operation

- Reliable operation of the unit and very low cost of operation
- Long sensor life, resistant to water intake

TYPICAL APPLICATIONS

- Air conditioning systems
- Automotive air conditioning units
- Heat pumps
- Compressors and tubing
- CO₂ components
- Components or systems filled with SF₆

Calibrated Test Leaks for Sniffer Applications

The function of these leaks is based on a special quartz capillary which is customized to deliver a specific reduced flow from a test gas reservoir.

This type of calibrated test leaks is available in different leak rates and test gases (see ordering information).

USER ADVANTAGES

- Highly accurate and reliable due to the profile of the quartz capillary
- Metal-free capillary for low temperature dependance
- Inspection certificate (included) in accordance to DIN EN 10204:2004-3.1
- Determination of the nominal leak rate by comparison with a calibrated leak having a PTB certificate
- DKD certificate (optional) traceable to PTB
