**What level of hearing protection do you need?**

All hearing protectors sold by Jackson Safety are tested to the American National Standards Institute (ANSI) S3.19-1974 Standard to receive a Noise Reduction Rating (NRR), which is labeled on all such products as required by the U.S. Environmental Protection Agency (EPA). This number gives the consumer a method to judge performance among different models of hearing protectors - a higher NRR indicating more effective protection against sound. Some models of hearing protectors have multiple NRR numbers. This reflects the fact the these hearing protectors may be worn with their headbands in different positions.

hearingprotection

## THE ANSI Z87.1+ RATING FOR SAFETY GLASSES

In order to receive the ANSI Z87.1+ rating, safety glasses must undergo extensive testing. According to the 2003 standard, they must be able to withstand the impact of a 17.6 oz. ball being dropped from 50.0 inches. Additionally, there must be zero penetration for high velocity impact at 100 feet per second. All safety glasses receiving this rating have met the requirements from prism imbalance, refractive power, haze, transmittance and U.V. protection.

## WHAT DOES THE BASE CURVE MEASURE?

Base curve is the measurement of a spectacle lens or curvature. The higher the base curve, the greater the sweep of the spectacle. This provides more wrap-around protection, peripheral vision and eliminates the need for side shields.

## GAUGE™

**Smith & Wesson®**

Shown above

GUN CLEANING BARREL 12/16 GAUGE LONG TUBE	3010634 [SBR-03]
GUN CLEANING BARREL 20 GAUGE LONG TUBE	3010635 [SBR-04]

### FULL BORE RUNNER™

For those shooters who prefer a full length quick clean rod. Includes a 35.5" long quick clean rod with Silencio branded wood handle and a cotton bore swab. Acrylic Tube Packaging

DESCRIPTION	PART#
GUN CLEANING BARREL FULL 12/16 GAUGE	3010638 [FBR-01]
GUN CLEANING BARREL FULL 20 GAUGE	3010639 [FBR-02]

## STANDARDS FOR WORK ZONE SAFETY

**ANSI 107:** The American National Standards Institute (ANSI) publishes a regulatory safety standard for high visibility clothing. The standard defines three classes of successively more visible garments that protect workers exposed to increasingly higher levels of risk from motor vehicles and heavy equipment.

**MUTCD:** The Manual on Uniform Traffic Control Devices (MUTCD) is a document issued by the Federal Highway Administration (FHWA) of the United States Department of Transportation (USDOT) to specify the standards by which traffic signs, road markings, and signals are designed, installed and used. These specifications include the shapes, colors, and fonts used in road markings and signs. All of Jackson Safety's traffic products meet MUTCD standards.

**NCHRP 350:** The National Cooperative Highway Research Program (NCHRP) represents uniform guidelines for conducting full-scale crash tests for permanent and temporary highway safety features. The crash performance is judged on structural adequacy, occupant risk and vehicle trajectory. Products addressed in these guidelines include longitudinal barriers, transitions, end terminals, crash cushions, breakaway/yielding supports, truck mounted attenuators and work zone traffic control devices. All of Jackson Safety's traffic products meet or exceed NCHRP 350 regulations.

**ITE:** The Institute of Transportation Engineers (ITE) is an international educational and scientific association of transportation professionals who attempt to meet mobility and safety standards. ITE facilitates the application of technology and scientific principles to research, plan, functional design, implementation, operation, policy development and management for any mode of transportation. Jackson Safety's line of barricade lights have all been awarded ITE certification.

**FMVSS 125:** Federal Motor Vehicle Safety Standards (FMVSS) is a standard that applies to the shape, size, and performance requirements for reusable day and night warning devices that can be erected on or near the roadway to warn approaching motorists of the presence of a stopped vehicle. Our safety triangles conform to FMVSS standards.

**OSHA:** Occupational Safety and Health Administration (OSHA) is a division of the United States Department of Labor. Their mission is to prevent work-related injuries, illnesses and deaths by issuing and enforcing standards for workplace safety and health.

**ISEA:** The International Safety Equipment Association (ISEA) is the primary trade association in the U.S. for companies that manufacture safety and personal protective equipment. The member companies are world leaders in the design and manufacturing of protective clothing and equipment used in factories, construction sites, hospitals, clinics, farms, schools, laboratories, emergency response and in the home.

## REGULATIONS

### MUTCD (Manual on Uniform Traffic Control Devices)

The Manual on Uniform Traffic Control Devices (MUTCD) is a document issued by the Federal Highway Administration (FHWA) of the United States Department of Transportation (USDOT) to specify the standards by which traffic signs, road markings and signals are designed, installed and used. In the United States, all traffic control devices must generally conform to these standards. The manual is used by state and local agencies as well as private construction firms to ensure that the traffic control devices they use conform to the national standard. While some state agencies have developed their own set of standards, their standards must be in substantial conformance with the MUTCD.

### NCHRP 350 (National Cooperative Highway Research Program)

The National Cooperative Highway Research Program represents uniform guidelines for conducting full-scale crash tests for permanent and temporary highway safety features along with recommended evaluation criteria to assess the test results. The crash performance is judged on structural adequacy, occupant risk and vehicle trajectory. Category I devices may be self-certified and include traffic cones, channelizer drums (without lights) and delineators. Category II devices must be crash-tested include channelizer drums (with lights), vertical panels, barricades (Types I, II and III) and sign stands.

### ITE (Institute of Transportation Engineers)

The Institute of Transportation Engineers is an international educational and scientific association of transportation professionals who attempt to meet mobility and safety needs and was founded in 1930. ITE is a standards development organization designated by the U.S. Department of Transportation. Traffic barricade lights must also adhere to ITE testing standards.

## SPECIALTY VESTS

Constructed of heavy-duty 9 oz. vinyl coated fluorescent knit fabric. Reflective 1-3/8" vertical stripes and 4"x16" reflective patches on both front and back. Reflective colors of lime or white only. SCREEN PRINTING FOR APPAREL

Jackson Safety will customize apparel at your request. Supplying camera-ready artwork benefits you by avoiding any additional fees and longer lead times. Below is a listing of all of our apparel that can be silk screen printed. We can print on any size, as the sizes increase (from size large), the back width increases 1/2" for each size up and decreases 1/2" for each size down. Only available in black ink. Silk screen only - no stenciling.

Customizing your vest is easy!

1. Contact our customer service team at (800) 648-1812 Opt 4 to order.
2. Minimum order of 15 vests that are the same style (different sizes of that style may be ordered).
3. There is a 2 week lead time after the customer approval of artwork and receipt of valid purchase order.

Description	Printing Dimensions (BACK)	Printing Dimensions (FRONT)
ANSI Class 2 Vest - Two Tone, L *	7"W X 7"H	N/A
ANSI Class 2 Vest - Deluxe, Solid, L	11.5"W X 10"H	3"W X 3"H right side only
ANSI Class 2 Vest - Deluxe, Mesh, L	11"W X 10"H	3"W X 3"H right side only

\*On all of the ANSI Class 2 Two-Tone Vests, the screen printing dimensions do not increase with size changes.

## SAFETY TRIANGLES

Shown left \$3006007  
with 3 red triangles in case

Meets Federal Motor Vehicle Standard No. 125. Constructed on molded polypropylene plastic with red acrylic plastic reflectors. Air-flow design helps reduce wind resistance. Kit includes three triangles in one red, hard plastic case.
