

Model MMZ MAGNETIC MINI CHUCK

[Application]

These chucks are used in combination with a magnetic chuck as an auxiliary holding tool for irregular-shaped workpieces in grinding and light duty cutting. They are of waterproof construction enabling them to hold workpieces in electric discharge machining fluid.

[Features]

- The magnetic force can be turned ON and OFF from either the front side or the rear side.
- The waterproof construction allows use in fluid.

Model MMC MAGNETIC MINI CHUCK

[Application]

These chucks are used in combination with a magnetic chuck as an auxiliary holding tool for irregular-shaped workpieces in grinding and light duty cutting.

They can also be used for such applications as holding workpieces in advance to reduce the set-up time. Thus they can be used for continuous grinding of small and thin workpieces.

[Features]

- These chucks are powerful with special construction using Alnico magnet steel.
- Although small, these chucks have an ON/OFF mechanism.

Model MMW MAGNETIC MINI CHUCK

[Application]

These chucks have three attractive faces and can be used in combination with a magnetic chuck. They are suitable for determining angles of small workpieces and angle grinding.

[Features]

- Since these chucks have three attractive faces, one face may be used for mounting the chuck and other faces for holding workpieces.
- They have magnetic poles arranged at micro pitches to hold small workpieces.
- They are of waterproof construction.

Model **MMXW** MAGNETIC MINI CHUCK

MMXW-611A

[Application]

These chucks are suitable for holding workpieces in such processes as grinding, boring, cutting, electric discharge machining, welding and assembly. Since four faces can hold workpieces simultaneously, they can be used as a magnet vice in a wide range of applications.

[Features]

- These are unique universal mini chucks capable of holding workpieces on four faces.
- They can be used in such a way as to hold workpieces on the bed of machine tools or holding workpieces on the top and side faces simultaneously. They can also be used as a guide stopper to secure workpieces.
- The accuracy is as follows: flatness 0.01 mm, parallelism 0.02 mm, perpendicularity 0.03 mm.

Model	Holding Power		Dimensions			Pole Pitch	Height	Mass
	Two Face Holding	Full Face Holding	B	Le	L	P	H

Model **KPB** MAGNETIC BLOCK

KPB-1F18

KPB-2F18

An example of usage of double-face attracting block

[Application]

These blocks can hold workpieces during electric discharge machining, and grinding. They can be used as holding tools for assembly and light-duty machining.

[Features]

- The both sides can hold workpieces and can be turned ON and OFF individually. (2F models)
- They are secured to the worktable by turning ON and OFF the magnet. (2F models)
- The side faces (ON/OFF select faces) can also hold workpieces. (2F models)
- They are secured to the worktable using tapped holes provided on the mounting face. They can also be secured by having them held by a magnet chuck. (1F model)
- The operating areas are provided on both side faces to facilitate ON/OFF operation.
- Light weight for easy positional adjustment.
- The operating handle is removal and will not hinder the work.
- One set of two blocks has been machined and finished together.
- They are of dripproof and oilproof construction to allow them to be used in fluid.

Model MM FREE BLOCK

Freely workable permanent magnetic blocks

[Application]

These blocks are designed to allow deep engraving (machining by customer) such as grooves and steps on the magnetic attractive face to fit workpiece shapes when holding workpieces on these MM models.

[Features]

- The attractive face can be removed up to 10 mm deep from the surface of new blocks.
- As workpieces can be fitted in grooves, a large machining pressure can be used. Also cemented carbide workpieces, which are difficult to hold, can be held by using these blocks uniquely to enable grinding.
- These blocks can be mounted on the magnetic chuck work face.
- There are two types; a magnetic force ON-OFF type and a type not equipped with ON-OFF function.

Model KYA SQUARE TYPE BLOCK

KYA-8A

[Application]

Holding tools for marking and lightduty machining.
Holding tools for electric discharge machining.

Holding tools for three-dimensional measuring instruments and various measuring systems.

[Features]

- Workpieces can be held on three faces of top (V face) and both side faces.
- T-handle ON/OFF switch comes attached, but can be removed.
- They are of dripproof and oilproof construction.
- An M8 tapped hole is provided on the top for lifting (KYA-18 only).
- Super high accuracy finish is also available. Please contact us.

KVA-1A

KVA-2A

[Application]

Holding tools for round bar marking, drilling, tapping and grinding of irregular-shaped workpieces.

Holding tools for electric discharge machining.

Holding tools for three-dimensional measuring instruments and various measuring systems.

[Features]

- Workpieces can be held on the top face (V face), bottom face, and rear face.
- T-handle ON/OFF switch comes attached, but can be removed.
- They are of dripproof and oilproof construction.
- Super high accuracy finish is also available. Please contact us.

Model MV MINI V-ADAPTER

An example of usage

■ Model: MV-1 ■ Dimensions: 80 × (42) × 10 mm
■ Parallelism: 0.006 ■ Hardened

[Application]

This product itself is not magnetic, but when it is placed on a V-Holder having the N pole and S pole on separate sides like Model KVA, it induces magnetism to hold small diameter workpieces that can not be physically mounted directly. (See the figure below.) This adapter is recommended for holding workpieces during grinding, drilling and measurement.

[Features]

- The attractive faces can be set to any angle between 90 and 180 degrees.
- The hinge part acts as a separator to divide magnetic poles.

Model KMV MAGNETIC V-BLOCK

Model KMV MAGNETIC V-BLOCK

[Application]

Holding tools for round bar marking and drilling.
Holding tools for electric discharge machining.
Holding tools for three-dimensional measuring instruments and various measuring systems.

[Features]

- Workpieces can be held on the top face (V face), and rear face.
- T-handle ON/OFF switch comes attached, but can be removed.
- They are of dripproof and oilproof construction.
- One set consists of two blocks.
- Super high accuracy finish is also available. Please contact us.

Model KMV-M MAGNETIC MINI V-BLOCK

[Application]

These blocks are used to hold small diameter round bars on optical measuring equipment. (Non-waterproof type)

[Features]

- One set consists of two blocks. The attractive faces and other working faces have been machined accurately. The blocks can be turned ON and OFF by 90° turning using a screwdriver on the back.

Model **KT·KTV** CHUCK BLOCK

KT-1

KTV-1

KT-4

[Application]

These blocks are used in combination with a magnetic chuck as an auxiliary tool to hold round bars and sheet-like workpieces that are difficult to hold on their side faces only by chucking.

[Features]

- Since these blocks are not magnetized themselves, they are placed on a magnetic chuck to induce magnetism to hold workpieces. Magnetism can be induced on two faces of top and side or V face and side.
- Specially-shaped workpieces can also be held by use of chuck blocks, thus making it possible to utilize your chucks in stock.
- One set of two blocks has been finished together. (KT-3 and -4 are available individually.)
