KENNA UNIVERSAL

VERSATILITY — only 6 grades needed for virtually all your machining requirements!

QUALITY — from the world's premier tooling solutions supplier!

VALUE — decrease your inventory costs by up to 50%!

Introducing

Kennametal's KENNA UNIVERSAL™ Tooling — brought to you by Kennametal and your local authorized Kennametal distributor...

…specifically designed to enable job shops to grow business, increase profitability, and reduce everyday production worries!

IN JOB SHOPS

LATHE

- ***3 brand-new grades*** for maximum versatility in all general lathe applications:
  - **KU10T** – for medium to finish machining of steels, stainless steels, cast irons, non-ferrous materials, and superalloys
  - **KU25T** – for threading and cut-off work in virtually all workpiece materials
  - **KU30T** – for most roughing through semi-finishing cuts
- A complete product range: turning, boring, grooving, threading, and cut-off!
- Plus, our ***A4 Turn & Groove System*** – and so much more!

MILLING

- ***2 brand-new grades*** for outstanding results in all general milling applications:
  - **KUC20M** – for face-milling of steels, stainless steels, cast irons, non-ferrous materials, and superalloys
  - **KUC30M** – for even the toughest workpiece challenges
- A ***KSSM Face-Milling*** platform where one insert style works in three different cutters (face, slotting, helical)!
- Plus, a wide variety of inch and metric ***Solid Carbide End Mills***!

HOLEMAKING

- ***A brand-new grade*** for superior drilling productivity:
  - **KU40D** – for general-purpose holemaking tasks
- Just the right combination of Solid Carbide, QPV Spade Blade, and Indexable-Insert Drills – in inch and metric!

TOOLING SYSTEMS

- Unsurpassed global standard ***Toolholding Systems***!
- Plus, ***KM25***™ — our latest quick-change offering that replaces conventional 1" (or 25mm) square-shank tooling — no machine modifications required!

Kennametal understands the unique business needs of today's global job shops.

Let us prove it.

Call us or your local authorized Kennametal distributor for full program details!

Grade Selection and Naming

GRADE SELECTION

Available for turning, holemaking, and milling operations in six highly versatile grades –

KU10T, KU25T, and **KU30T** for turning; **KU40D** for holemaking; and **KUC20M** and **KUC30M** for milling.

	(P) STEEL	(M) STAINLESS STEEL	(K) CAST IRON	(N) NON-FERROUS	(S) HIGH-TEMP ALLOY	(H) HARDENED MATERIALS

P	Steel
M	Stainless Steel
K	Cast Iron
N	Non-Ferrous
S	High-Temp Alloys
H	Hardened Materials

KENNA UNIVERSAL – Turning Grades

Grade Selection Table

Type	Grade	Coating	Composition and Application	Area of use
		C-Class		Standard designation / Wear resistance / Toughness: 05 10 15 20 25 30 35 40 45
PVD-Coated Carbide Grades	**KU10T** NEW!	 TiN TiAlN C3, C4	**composition:** An advanced PVD coating over a highly deformation-resistant carbide substrate. **application:** KU10T is an ideal general machining grade designed for medium to finishing operations. KU10T is excellent when machining most steels, stainless steels, cast irons, non-ferrous materials, and superalloys under stable conditions. KU10T is also effective when machining hardened and short-chipping materials.	P M K N S H
	KU25T NEW!	 TiN TiAlN C2, C6	**composition:** An advanced PVD coating over a tough and highly wear resistant carbide substrate. **application:** KU25T is ideal for finishing to general machining of most workpiece materials. With a higher cobalt content than KU10T, this grade provides the toughness needed to handle the demands of grooving, threading and cut-off operations. KU25T performs extremely well when machining most steels, stainless steels, cast irons, non-ferrous materials, and superalloys under stable conditions. KU25T can also be effectively applied when machining hardened and short-chipping materials.	P M K N S H
CVD-Coated Carbide Grades	**KU30T** NEW!	 TiN TiCN TiC C5, C6	**composition:** A tough cobalt-enriched substrate with a multilayered CVD coating. **application:** KU30T is a new grade designed specifically for the job shop industry where a wide range of workpiece materials is employed. With its tough cobalt-enriched substrate, KU30T performs very effectively in roughing and medium machining operations. The post-coat grinding of the insert permits stable insert seating while the post-coat treatment resists workpiece build-up and microchipping. For roughing steels, cast irons, and stainless steels, your first choices are the –RN, -MN, and the –RP geometries. For medium machining (and finishing), the –MP geometry with a positive rake is suggested.	P M K N S H

Geometries for Steel, Stainless Steel, Cast Iron, Non-Ferrous, High-Temp Alloys, and Hardened Materials

1st Step – Select the Insert Geometry

Negative Inserts

▼ Roughing

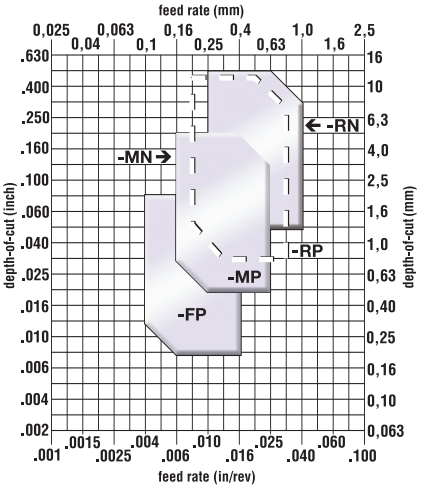
-RN -RP

▼▼ Medium Machining

-MN -MP

▼▼▼ Finishing

-FP



Positive Inserts

▼▼ Medium Machining

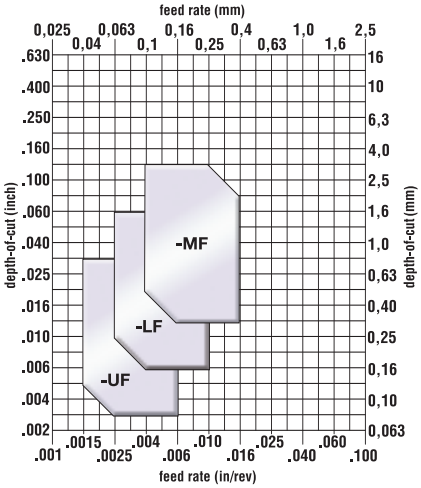
-MF

▼▼▼ Finishing

-LF

▼▼▼▼ Fine Finishing

-UF



2nd Step – Select the Grade

Cutting Condition	Negative Insert Geometry					Positive Insert Geometry		
	-FP ▼▼▼	-MP ▼▼	-MN ▼▼	-RN ▼	-RP ▼	-UF ▼▼▼▼	-LF ▼▼▼	-MF ▼▼
heavily interrupted cut	–	KU30T	KU30T	KU30T	KU30T	–	KU30T	KU30T
lightly interrupted cut	KU10T	KU30T	KU30T	KU30T	KU30T	KU10T	KU30T	KU30T
varying depth of cut, casting or forging skin	KU10T	KU10T	KU30T	KU30T	KU30T	KU10T	KU10T	KU30T
smooth cut, pre-turned surface	KU10T	KU10T	KU30T	KU30T	KU30T	KU10T	KU10T	KU30T

To place an order, contact your authorized Kennametal distributor or visit www.kennametal.com.

3rd Step – Select the Cutting Speed

Plain Carbon and Alloy Steels, Ferritic and Martensitic and PH Stainless Steels

Material Group	grade	Speed - sfm (m/min) 170 (50)	330 (100)	490 (150)	655 (200)	820 (250)	980 (300)	1150 (350)	Starting Conditions ◁▷ sfm	m/min
P	KU10T				◁▷				650	200
	KU30T			◁▷					500	150

Austenitic and Stainless Steels

Material Group	grade	Speed - sfm (m/min) 170 (50)	330 (100)	490 (150)	655 (200)	820 (250)	980 (300)	1150 (350)	Starting Conditions ◁▷ sfm	m/min
M	KU10T				◁▷				600	180
	KU30T			◁▷					450	140

Gray and Ductile Cast Irons

Material Group	grade	Speed - sfm (m/min) 170 (50)	330 (100)	490 (150)	655 (200)	820 (250)	980 (300)	1150 (350)	Starting Conditions ◁▷ sfm	m/min
K	KU10T					◁▷			800	240
	KU30T				◁▷				650	200

Non-Ferrous Metals: Low-silicon aluminum alloys (<12%) and magnesium alloys

Material Group	grade	Speed - sfm (m/min) 800 (240)	1200 (360)	1600 (490)	2000 (610)	2400 (730)	2800 (855)	3200 (975)	Starting Conditions ◁▷ sfm	m/min
N	KU10T			◁▷					1500	460

High-Temp Alloys

Material Group	grade	Speed - sfm (m/min) 170 (50)	330 (100)	490 (150)	655 (200)	820 (250)	980 (300)	1150 (350)	Starting Conditions ◁▷ sfm	m/min
S	KU10T		◁▷						220	65
	KU30T	◁▷							150	45

Hardened Materials (>48 HRC)

Material Group	grade	Speed - sfm (m/min) 170 (50)	330 (100)	490 (150)	655 (200)	820 (250)	980 (300)	1150 (350)	Starting Conditions ◁▷ sfm	m/min
H	KU10T		◁▷						200	60

◁▷ Represents the recommended starting conditions. Optimize for your specific application.

Toolholder Identification System

1. Insert Holding Method

D* KENCLAMP

S SCREW-ON

*Kennametal only

2. Insert Shape

C 80°	D 55°	K/N 55°
L 90°	R	S 90°
T 60°	V 35°	W 80°

5. Hand of Tool

R

L

N

6. Additional Information

P
polycrystalline insert

C
deep pocket for ceramic insert

S
single pocket locating wall

F
straight shank, no offset

Example:

D	C	L	N	R	

3. Tool Style or Lead Angle

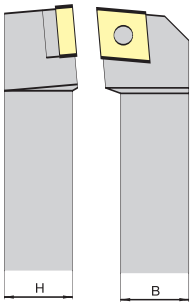
A 0°	B 15°	C 0°	D 45°	E 30°
F 0°	G 0°	H 50°	J 3°	K 15°
L 5° 5°	M 40°	P 27,5°	Q 17,5°	R 15°
S 45°	U 3°	V 17.5°	Y 5°	

4. Insert Clearance Angle

N 0°	D 15°	
B 5°	E 20°	
C 7°	F 25°	
P 11°		

Inch
The seventh and eighth positions shall be a significant two-digit number that indicates the holder cross section. For shanks 5/8" square and over, the number will represent the number of sixteenths of width and height. For shanks under 5/8" square, the number of sixteenths of cross section will be preceded by a zero.
For rectangular holders, the first digit represents the number of eighths of width "B" and the second digit the number of quarters of height "H", except for a toolholder 1 1/4" x 1 1/2" which is given the number 91.

Metric
The seventh and eighth position shall be a significant two-digit number which indicates the holder cross section. If the dimension for the width "B"or the height "H" is represented by a one-digit number, a 0 (zero) will be used in front of it.
Example: 8 mm = 08



Inch Insert IC
Number of 1/8ths of "D"

Inch

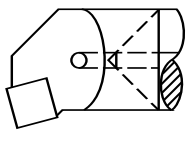
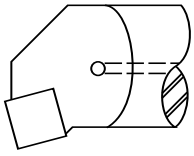
Boring Bar Identification System

E



carbide bar with coolant

A

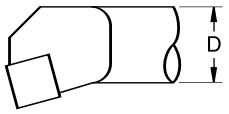


steel bar with coolant

1. Bar Type

Inch:
A two-digit number that indicates the bar diameter in 1/16-inch increments.

Metric:
A two-digit number which indicates the bar diameter in mm. If the dimension for the diameter is represented by a one-digit number, a 0 (zero) will be used in front of it.
Example: 8 mm = 08



2. Bar Diameter

Example:

A	32

3. Bar Length**

Inch

3 – F
3.5 – G
4 – H
4.5 – J
5 – K
5.5 – L
6 – M
6.5 – N
6.75 – P
7 – Q
8 – R
10 – S
12 – T
14 – U
16 – V
18 – W
20 – Y

** Used only when more than one length is available or a special length is required.

KM25™ Turning System...

...engineered specifically to optimize your machining operations — no matter how challenging your particular application!

- The world's most economical, rigid, and accurate modular quick-change tooling!
- Dramatically reduce your machine downtime... can be fully and easily employed on your lathe or mill-turn machine — with no modifications necessary!
- Ideal for 30HP or less equipment!

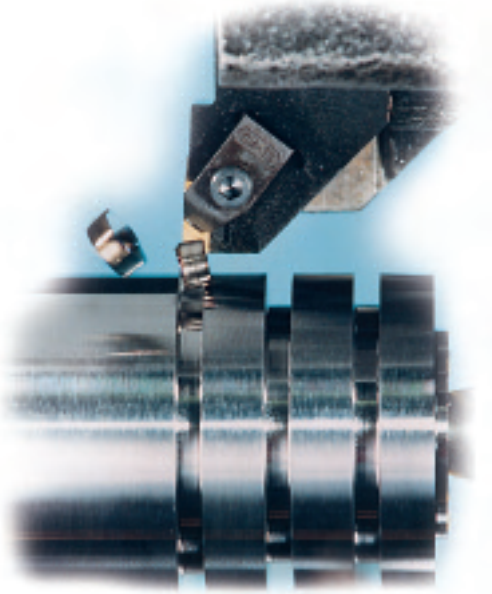
KENNAMETAL®

ENGINEERING YOUR COMPETITIVE EDGE

TOP NOTCH Grooving



Versatile Design

- Design versatility means this one system handles operations such as:

  O.D. and I.D. grooving

  face grooving

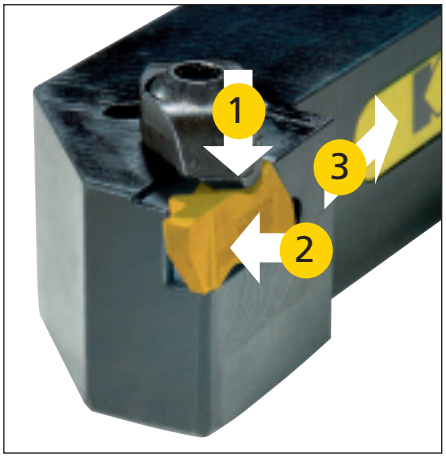
  back turning

  undercutting

  ...and threading

Chip-Control Inserts

- Enable excellent chip evacuation in grooving operations.
- Provide better control in multi-directional turning.



Rigid Clamping Design

- Locks insert securely in place for zero movement in high-feed-rate applications.
- Achieves outstanding cutting precision through even the toughest cuts.
- Enables excellent surface finish, improved productivity, and superior tool life.
- Promotes perfect concentricity in the application.

The rugged bridge clamp generates locking forces in three directions to provide superior resistance to side thrust and tangential forces!

Recommendations for Grade and Speed Selection – sfm (m/min)

Machining Condition		Workpiece Material: Steel	Stainless Steel	Cast Iron	Non-Ferrous Metals	High-Temp Alloys	Hardened Materials
KENNA UNIVERSAL	Grade	KU30T	KU10T	KU30T	KU10T	KU10T	KU10T
	Range	200 - 650 (60 - 200)	150 - 550 (50 - 170)	200 - 650 (60 - 200)	500 - 2400 (150 - 730)	50 - 360 (20 - 110)	50 - 100 (20 - 40)
	Starting Conditions	500 (150)	400 (120)	500 (150)	1500 (450)	200 (60)	70 (20)

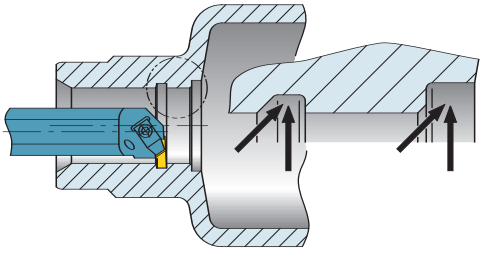
Example for TOP NOTCH – Grooving:

material: low-alloyed steel
groove depth: .079 in. (2 mm)
groove width: .118 in. (3 mm)
operation: I.D. cut, limited speed capability, plunge groove and chamfer

Recommendation:

insert: NG2M300RK
grade: KU30T
insert width: .118 in. (3 mm)
insert size: 2

toolholder: A12NEL2 (inch)
A20QNNTOL2 (metric)
gage insert: N.2R



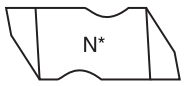
speed: 500 sfm (150 m/min)
feed: .006 ipr (0,15 mm)

Note: The insert size must match the gage insert size of your toolholder selection.

See page A4 for KU10T, KU25T, and KU30T grade descriptions.

To place an order, contact your authorized Kennametal distributor or visit www.kennametal.com.

N -Top Notch



1. Type of Insert

N

2. Insert Style

G

G – grooving
R – full radius

D – deep grooving
☐ – (blank) indicates standard grooving

3. Additional Information

D

4. Insert Size

3

insert size	W1 (in.)	W1 (mm)
2	.150	3,81
3	.195	4,95
4	.255	6,48

M – metric insert groove width
☐ – (blank) indicates inch width insert

5. Size Identification

125

6. Groove Size

Position pertains to groove width for G-style inserts; radii for R-style grooving inserts. Dimension in .001 inch or 0,01 mm.
Metric example: 3,50 mm width groove or radius equals "350" catalog position number
Inch example: 1/32" width groove or radius equals "031" catalog position number
Width Tolerance: ± .001 inch (± 0,025 mm) unless otherwise specified

L – left
R – right

7. Hand of Insert

R

8. Chipbreaker Design

K

K – standard chip control

*Kennametal proprietary identification system

TOP NOTCH Threading and Grooving Insert Dimensions

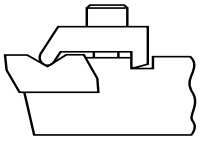
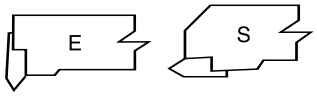
1. Insert Holding Method

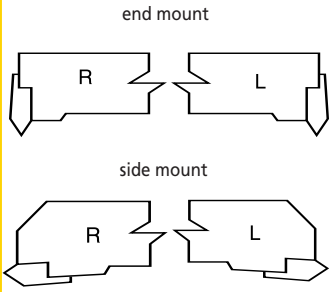


N – TOP NOTCH*

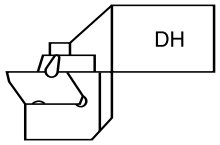
2. Insert Mounting Location



3. Hand of Tool



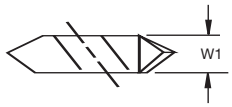
4. Drop Head



5. Shank Size

metric:
Shank height and width in mm and holder length according to ISO standard.
inch:
This position will show a significant two-digit number that indicates the holder cross section. For shanks 5/8" square and larger, the number will represent the number of sixteenths of width and height. For shanks under 5/8" square, the number of sixteenths of cross section will be preceded by a zero. For rectangular holders, the first digit represents the number of eighths of width and the second digit the number of quarters of height, except for a toolholder 1 1/4" x 1 1/2", which is given the number 91.

6. Insert Size



insert size	W1 inch	W1 mm
2	.150	3,81
3	.195	4,95
4	.255	6,98

7. Qualified Surface and Length

- A – qualified back and end, 4" long
- B – qualified back and end, 4.5" long
- C – qualified back and end, 5" long
- D – qualified back and end, 6" long
- E – qualified back and end, 7" long
- V – qualified back and end, 3.5" long*
- Q – qualified metric holder

* Kennametal proprietary standard only.

Kennametal's Top Notch clamping system provides the versatility to do both threading and grooving.

Top Notch inserts employ a unique top rake chip control geometry that efficiently evacuates chips and produces better quality parts faster.

*Minimum bore applicable only when used with NFD-KI inserts on internal face grooves (see Lathe Catalog 4010 for inserts). See page A68 for machining guidelines when face grooving with NG and NGD inserts.

To place an order, contact your authorized
Kennametal distributor or visit www.kennametal.com.

Order example:
ANSI Catalog number: **A16NSR3**

Machining Guidelines for Chip Control – Grooving

- Center height of insert should be positioned at the center of the workpiece, or up to .005 inch (0,13 mm) above.
- Dwell time in the bottom of the groove, more than three revolutions, is not recommended.
- Chip control is feed rate related, and should be adjusted to fit the particular situation. Recommended feed range is .003-0.012 ipr (0,08-0,3 mm/rev).

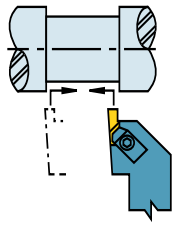
Machining Guidelines for Chip Control – Turning/Profiling

- Maximum depth of cut for side cutting (turning/profiling) depends upon material being cut and width of the tool. However, some general guidelines are:

1) .031 - .062 inch (0,79-1,6 mm) wide insert can cut up to .025 inch (0,6 mm) deep.
2) .067 - .128 inch (1,7-3,3 mm) wide insert can cut up to .040 inch (1,0 mm) deep.
3) .138 - .189 inch (3,5-4,8 mm) wide insert can cut up to .080 inch (2,0 mm) deep.
4) .197-.375 inch (5,0-9,5 mm) wide insert can cut up to .120 inch (3,0 mm) deep.

Finish turning the groove

1. Plunge both sides of groove width.
2. Plunge center area to remove web of material remaining.
3. To avoid insert chipping and to achieve groove wall perpendicularity, follow the tool path outlined here.
4. Use the lightest depth of cut that still allows good chip breaking, tool life, and surface finish.



Groove Limits (Maximum Internal Groove Depth Versus Minimum Bore Diameter)

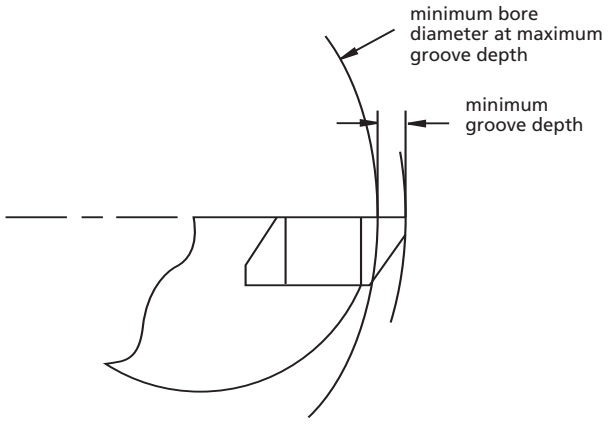
NG-4250R/L	.200	5,08	2.500	63,50

*The same maximum groove depth and minimum bore diameter values also apply to metric, NG-K (chip control), and NR (full radius) inserts of similar size.

Internal Groove Depth Versus Bar Interference



NOTE: Internal grooving depth limits are a function of bar clearance versus bore diameters.

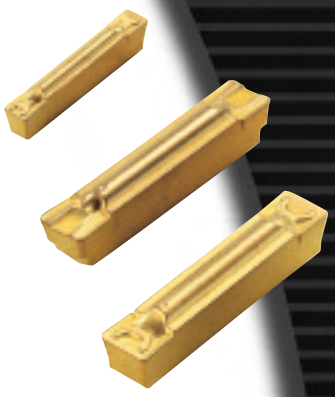
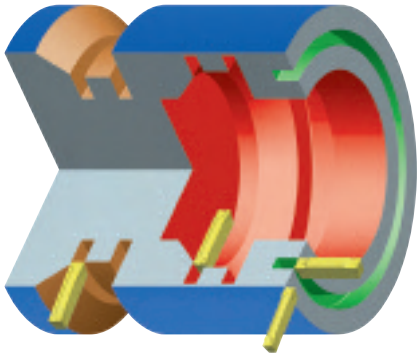
www.kennametal.com.

To place an order, contact your authorized Kennametal distributor or visit www.kennametal.com.

A4 Groove & Turn

- One tool for turning, facing, grooving, face-grooving, and cut-off… in OD and ID applications – that means exceptionally fast cycle times, no turret indexes!
- Extra-long clamping area, ground 120° bottom prism seating surface, and an exclusive top guide rail combine to deliver unsurpassed grooving and side-turning stability!
- Precise insert positioning is ensured – for accurate cuts!





The A4 system increases your productivity:

- Covers multiple applications.
- Reduces tool cost.
- Minimizes machining time.

KENNA UNIVERSAL – A4 Groove & Turn

3 Easy Steps to Greater Productivity in Grooving and Turning

1st Step – Select Chipbreaker Style and Feed Rate

Choose Chipbreaker Based on Material Type.

Steel	Stainless Steel	Cast Iron	High-Temp Alloys
GMN	GMP	GMN	GMP

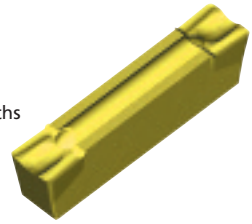
Depth of Cut and Feed Guidelines for Square Inserts (A4G...):

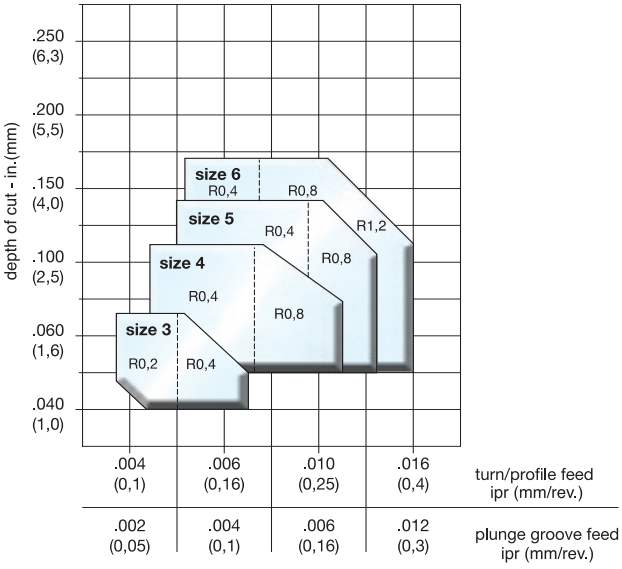
GMN Chipbreaker

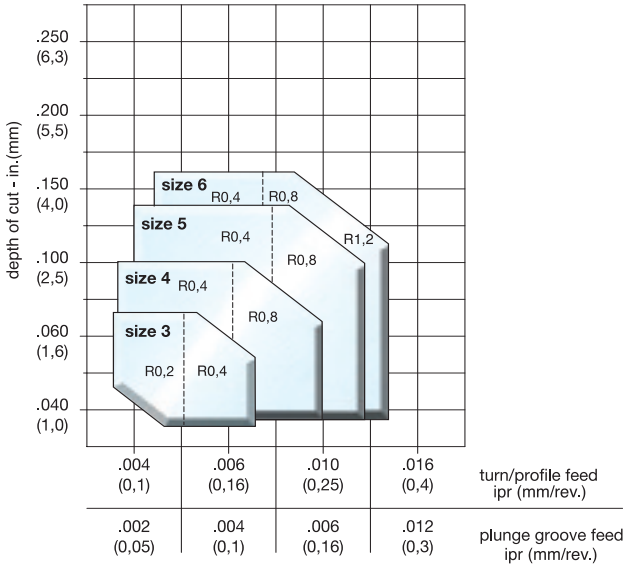
- Groove & turn molded inserts
- Stable cutting edge
- Available in metric widths only

GMP Chipbreaker

- Groove & turn molded inserts
- Positive rake angle
- Available in inch and metric widths



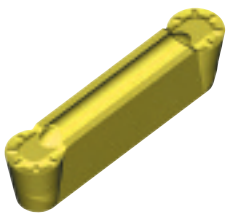




NOTE: Select feed based on nose radius. Diagram explanation: R0,2 - R = corner radius; 0,2 = 0,2 mm radius; see page A72 for further references.

Depth of Cut and Feed Guidelines for Full Radius Inserts (A4R...):

GMN Chipbreaker



Maximum turning and profiling depth of cut equals half the insert width.

The maximum turn and profile feed rate depends on the material to be machined and the depth of cut. For easy-to-machine materials, feed can be increased up to 1.5 times.

2nd Step – Select Speed

Recommended KENNA UNIVERSAL Grade

Cutting Conditions	Grades
heavily interrupted cut	KU30T
lightly interrupted cut	KU30T
varying depth of cut, casting or forging skin	KU30T
smooth cut, pre-turned surface	KU30T

Recommended KENNA UNIVERSAL Cutting Speeds

Material Group	Grade	Speed - sfm (m/min) 150 (45) / 300 (90) / 450 (140) / 600 (185) / 750 (230)	Starting Conditions sfm	Starting Conditions m/min
P	KU30T		400	120
M	KU30T		350	105
K	KU30T		650	200
S	KU30T		200	60

3rd Step – Select Insert and Holder from Catalog Page

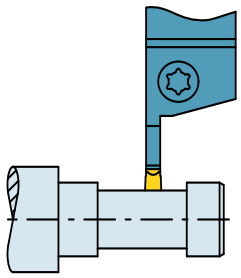
Example for A4 – Groove and Turn

material: low-alloyed steel
workpiece OD: 1.5 in. (38 mm)
groove depth: .5 in. (12 mm)
groove width: .850 in. (22 mm)
operation: lightly interrupted cut

Recommendation:

insert: A4G0405M04U08GMN
grade: KU30T
insert width: .159 in. (4,05 mm)
insert seat size: 4

toolholder: A4SMR160417
grooving depth: .670 in. (17 mm)
seat size: 4



speed: 400 sfm (120 m/min)
turn feed: .010 ipr (0,25 mm)
plunge feed: .006 ipr (0,14 mm)

NOTE: The insert seat size must match the seat size of your toolholder selection.

To place an order, contact your authorized Kennametal distributor or visit www.kennametal.com.

A4 Insert Identification System

Groove & Turn Inserts

1. Tooling System	2. Insert Type	3. Groove Width	4. Unit of Measurement for Grooving Width	5. Seat Size: Pocket Seat Size	5. Seat Size: Cutting Width (mm)	6. Insert Tolerance	7. Corner Radius: Metric	7. Corner Radius: Inch	8. Chipbreaker Type/ Edge Prep
A4	G	0405	M	04	U	02	GMN		

1. Tooling System
A4 – Groove & Turn

2. Insert Type
G – square
R – full radius

3. Groove Width
Expressed in 1/100 mm or .001 in.

4. Unit of Measurement for Grooving Width
M – metric

5. Seat Size

Pocket Seat Size	Cutting Width (mm)
03	3,0 – 3,05
04	4,0 – 4,05
05	5,0 – 5,05
06	6,0 – 6,05

6. Insert Tolerance
U = utility molded
grooving width tolerance:

3,05-6,05: $\frac{+.006 \text{ in.}}{-0}$ $\frac{(+0,15 \text{ mm})}{-0}$

7. Corner Radius

Metric	Inch
02 = 0,2	05 = .008
04 = 0,4	1 = .016
08 = 0,8	2 = .032

full radius = 00

8. Chipbreaker Type/ Edge Prep
GMN =
groove & turn medium machining
stable cutting edge

GMP =
groove & turn medium machining
positive rake angle

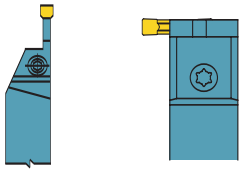
A4 Holder Identification System

Toolholders

1. Tooling System	2. Tool Style	3. Support Type	4. Hand of Tool	5. Shank Size	6. Seat Size	7. Max. Grooving Depth
A4	S	M	R	2525M (metric) 16 (inch)	03	17

1. Tooling System
A4 – Groove & Turn

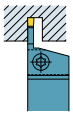
2. Tool Style
S – straight
E – end mounted 90°



3. Support Type
M = maximum support for specific groove widths and straight clearance for unlimited workpiece diameters

E = no steel support for face grooving

4. Hand of Tool



R = right hand
L = left hand
N = neutral

5. Shank Size
inch sizes: for square shanks, the number indicates the height and width in 1/16-inch increments (rectangular: 1st digit = width in 1/8-inch increments, 2nd digit = height in 1/4-inch increments)

metric: height x width in mm, letter indicates tool length according to ISO

metric tool length (mm)
K = 125
M = 150
P = 170

6. Seat Size
03, 04, 05, 06, 08, 10

7. Max. Grooving Depth
in Millimeters

Boring Bars

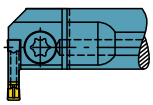
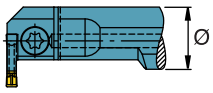
A	16	R	A4	E	M	R	03	10	N



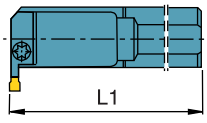
1. Steel Bar with Coolant

2. Bar Diameter



inch bars:
A two-digit number which indicates the bar diameter in1/16-inch increments.
metric bars:
bar diameter in millimeters

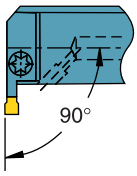
3. Bar Length



inch bars:
R = 8 inch
S = 10 inch
T = 12 inch
metric bars:
R = 200 mm
S = 250 mm
T = 300 mm

4. A4 Groove & Turn System

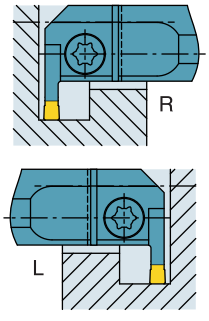
5. Tool Style



E = end mounted (90°)

6. Support Type
M = maximum support

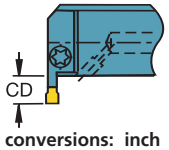
7. Hand of Tool



8. Insert Seat Size

Pocket Seat Size	Cutting Width (mm)
03	3,0 – 3,05
04	4,0 – 4,05
05	5,0 – 5,05
06	6,0 – 6,05

9. Grooving Depth in mm



conversions: inch
7 mm = .28
10 mm = .39
12 mm = .47
16 mm = .63

10. Tool Units
M – metric
N – inch

By customer demand, Kennametal Inc. and Sandvik® Coromant have entered into an agreement that allows both companies to manufacture, market, and sell KM and Coromant Capto products worldwide. Using the trademark Kennametal Capto, we make available a variety of leading and innovative Kennametal tooling designs utilizing the Coromant Capto coupling.

The manufacture and marketing of Kennametal Capto products and the use of the "Capto" trademark are in accordance with a license granted from Sandvik.

*Please refer to the Lathe 4010 catalog.

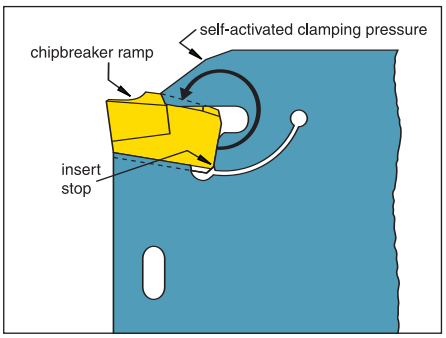
A2 Cut-Off

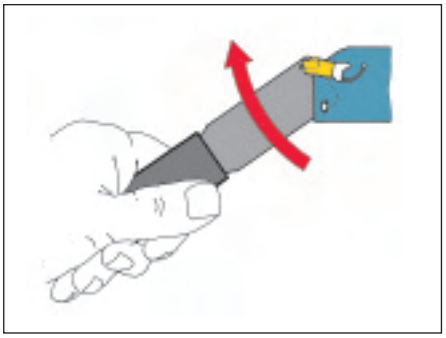
Innovative A2 Insert Design

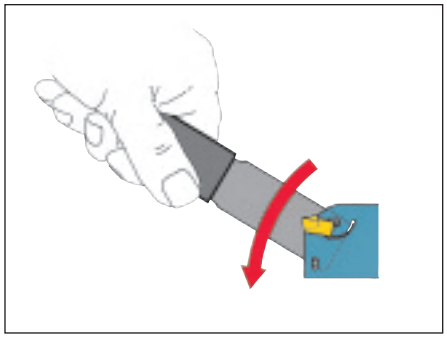
- V-prisms on both top and bottom enable higher clamping force to prevent insert movement, even when cutting at high feed rates.
- The cutting edge has a molded-in chipbreaker ramp to direct chips away from the blade, extending blade life.
- Positive rake cutting action combined with Kennametal's high-performance PVD coatings result in superior tool life and chip control.



Patented A2 Insert Stop Design

- As cutting forces increase, clamping forces also increase for secure holding power.
- Fixed insert stop ensures solid seating with every index and delivers up to 30% longer life.
- Cutting height is accurately controlled for maximum reliability and performance on even small-diameter parts.





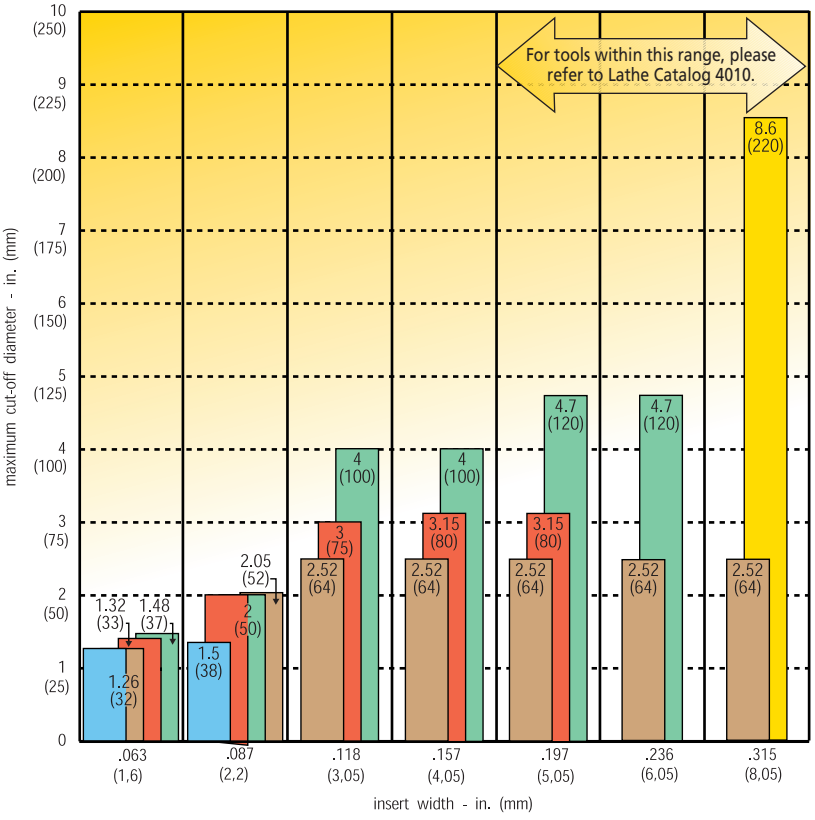
Quick and Easy Insert Indexing

- A convenient indexing wrench is available to minimize downtime by enabling fast removal and insertion without damage to the cutting edge.

KENNA UNIVERSAL – A2 Cut-Off

5 Easy Steps to Maximize Cut-Off Productivity

1st Step – Select Insert Width and Holder Type



What you need to know:

- cut-off diameter
- part/machine requirements

For required cut-off diameter, select insert width and holder type based on the part and machine requirement:

- To maximize rigidity, select the largest possible blade height or an integral shank toolholder.
- Diameters shown are for cut-off to center. Maximum cut-off depth to a through-hole is one-half of the diameter.
- To determine capability for cut-off to a through-hole on integral shank or reinforced blades, please refer to listing for that tool in this catalog.

blade height
19 mm
26 mm
32 mm
52 mm
Integral Shank Toolholders

Toolholder Type

Blade: (self-clamping)	**Toolholder: (with clamping screw)**
	• frequently used tool • two insert seats • deepest depth-of-cut capability	• shank tool with the highest stability • limited depth of cut • single insert seat

2nd Step – Select Insert Lead Angle

- part type
- burr and center stub considerations
- Cut-off to center or through-hole

	Neutral (0°)	**Right/Left 6° - 10°**	**Right/Left 15° - 16°**
Insert Type			Recommended Application	• for cutting off solid workpieces • center stub will form on cut-off part • eliminates lateral deflection • best for deep cut-off depths	• for cutting off solid workpieces with reduced formation of center stub • for cut-off to a through-hole with reduced burr	• for thin-walled workpieces • for cutting off small diameter workpieces with minimal burr or center stub
Tool Life	best tool life	better tool life	good tool life

To place an order, contact your authorized Kennametal distributor or visit www.kennametal.com.

3rd Step – Select Chipbreaker Style and Feed Rate

- lead angle or neutral insert
- workpiece material

- cut-off insert with precision ground cutting edge for low feeds
- curved cutting edge

- cut-off insert with precision molded cutting edge for medium feeds
- stabilized straight cutting edge

- cut-off insert with precision molded cutting edge for higher feed rates
- curved cutting edge

Chipbreaker Style and Feed Rates - in/rev (mm/rev)

Insert Type	Steel	Stainless Steel	Cast Iron	Non-Ferrous Metals	High-Temp Alloys
	**N-CR** .003 – .012 (0,08 – 0,3)	**N-CF** .002 – .005 (0,05 – 0,12)	**N-CM** .002 – .008 (0,05 – 0,2)	**N-CF** .002 – .007 (0,05 – 0,18)	**N-CF** .002 – .004 (0,04 – 0,10)
	N-CF .002 – .006 (0,05 – 0,15)				
	**R/L-CR** .002 – .005 (0,05 – 0,12)	**R/L-CF** .002 – .003 (0,04 – 0,08)	**R/L-CM** .002 – .005 (0,05 – 0,12)	**R/L-CF** .002 – .004 (0,04 – 0,10)	**R/L-CF** .002 – .003 (0,04 – 0,08)
	R/L-CF .002 – .003 (0,04 – 0,08)				

4th Step – Select Grade and Speed

Recommendations for Grade and Speed Selection – sfm (m/min)

	Workpiece Material				
	Steel	**Stainless Steel**	**Cast Iron**	**Non-Ferrous Metals**	**High-Temp Alloys**
KENNA UNIVERSAL	**KU25T** 210 - 450 (65 - 135)	**KU25T** 210 - 400 (65 - 120)	**KU25T** 180 - 400 (55 - 120)	**KU25T** 400 - 785 (120 - 240)	**KU25T** 65 - 200 (20 - 60)

5th Step – Select Insert and Holder from Catalog Page

Example for A2 Cut-off:

material: low carbon steel
workpiece dia.: 1.02 in. (27 mm)
depth of cut: .157 in. (4 mm)
requirements: need to minimize burr on through-hole

See page A4 for grade descriptions.

Recommendation:

insert: A2022R06CF02
grade: KU25T
cutting width: .087 in. (2,2 mm)
insert seat size: 2

toolholder: A2BNSN3202
seat size: 2

speed: 350 sfm (110 m/min)
feed: .002 ipr (0,05 mm)

Note: The insert seat size must match the seat size of your holder selection.

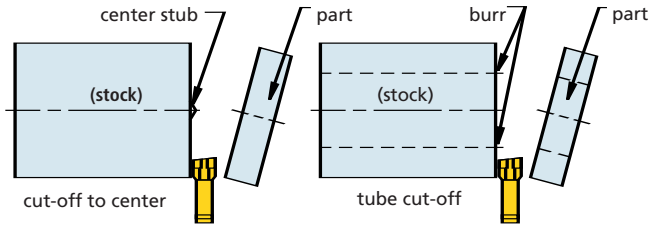
Definitions and Guidelines

1. width of cut (W) = width of the insert
2. lead angle = 0° (neutral) 6°, 10°, 15°, 16° (RH or LH)

To reduce the burr of cut-off faces:

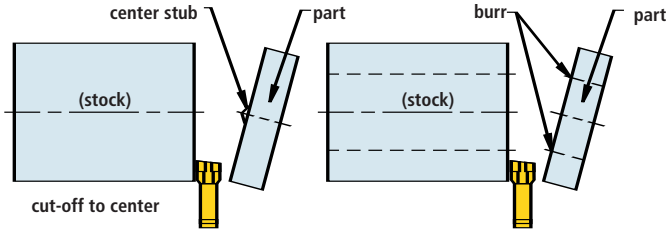
- To reduce burr formation on the part, use lead angle type insert (figure 1 & 2). Lead angle on a cut-off insert reduces the burr that remains on the part, but decreases tool life and increases tool side deflection and possibly cycle time.

fig. 1
insert selection **right-hand lead**



Right-hand lead insert leaves center stub or burr on stock and produces clean part.

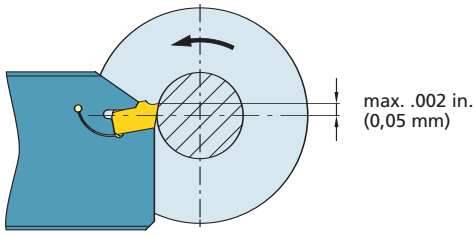
fig. 2
insert selection **left-hand lead**



Left-hand lead insert leaves center stub or burr on part and produces clean stock surface.

- Check tool height and maintain on center with part diameter.
- The cutting edge height should be within ±.004 in. (0,1 mm) to the center; recommended cutting position is .002 in. (0,05 mm) above center.

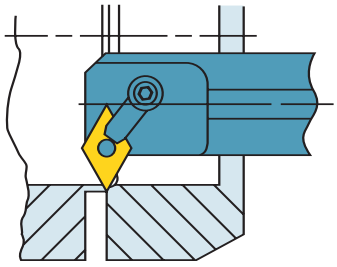
fig. 3
Above center:



- If 0° lead angle is mandatory, use the narrowest possible cut-off insert and blade. This will minimize the center stub or cut-off burr length. Decrease the feed rate to .002 in. (0,05 mm) or less at the point where diameter equals insert width.

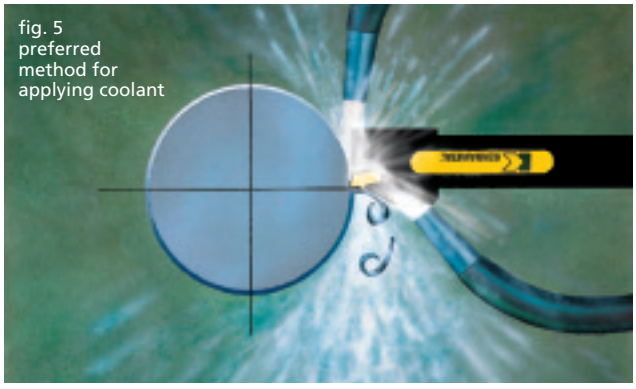
- On tubing-type parts that require a chamfer on the ID, align ID chamfer tool with cut-off surface. This will enable the chamfering operation to actually separate the part from the bar (see figure 4). Note the part may drop onto the chamfering bar which, in this case, will act like a part's catcher.

fig. 4
internal chamfer line up



To improve surface finish of cut-off faces:

- Use insert with 0° lead angle.
- Increase coolant flow or improve application technique, as shown in figure 5.
- Decrease the feed rate near the break-through point of the cut.
- Check that the grooving tool is set at a right angle.
- Use blades with the greatest possible face height and smallest possible cutting width.
- Increase the speed.



- Mount cut-off tool upside down. This allows gravity to remove chips and avoids cutting the chips twice. Another benefit from mounting the tool upside down is preventing chips from wedging between the tool insert and the groove side walls, which galls the side wall surfaces.

A2 and A3 compatibility:

A2 and A3 inserts can be interchangeably used on all screw-clamping holders within the following guidelines:

- A2 inserts can be used in A3 holders with equal seat sizes.
- A3 inserts CANNOT be used in self-clamping cut-off blades.
- A2 inserts are NOT recommended for face grooving toolholders.
- A2 inserts can be used in A3 modular blades if the guidelines noted above are followed.

KENNAMETAL MOBILE

Engineering Your Competitive Edge®

Kennametal Mobile

Increase your performance and productivity.

The easy way to transfer CNC data to and from your machine tools and manage your machine tool control profiles.

cncGcoder™
Software to receive/send/edit and save CNC programs & machine tool control profiles.

Complete package containing Palm Zire 71®, Palm docking station with USB and serial port, 16 MB SD memory card (Kennametal Mobile software), RS232 interface cable, desktop software and digital photo.

cncGcoder™ technical details
Send and receive CNC programs up to 1 MB – using the Kennametal Mobile and the RS232 port on the machine tool control. Manage up to 1,000 different machine tool control profiles. (CNC programs must be in ISO or ASCII format)

The Kennametal Mobile also includes all the standard Palm software and features.

Kennametal Mobile
Order number: 2253135

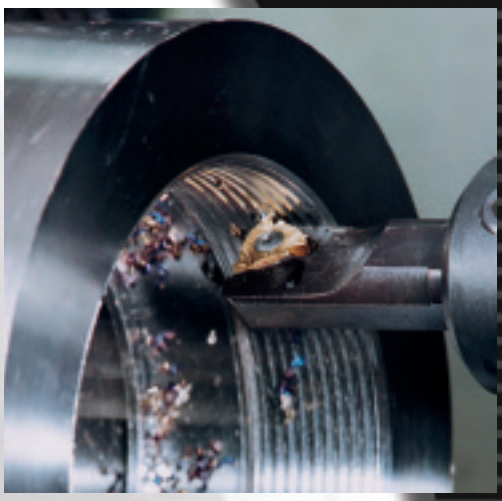
Software upgrade for Mazak® controls
This upgrade works in combination with the standard Kennametal Mobile (2253135) and adds the ability to communicate with Mazak® controls.
Order number: 2609414

Kennametal Mobile supports the following languages: English, German, French, Italian, Spanish, Portuguese and Dutch.

www.kennametal.com/mobile

KENNAMETAL®
ENGINEERING YOUR COMPETITIVE EDGE

LT – Laydown Triangle Threading



- LT is the system of choice for:
  - fine-pitch threads
  - high-helix/multi-start threads
  - single-point threading
- Achieve unrestricted chip flow with the low-profile system design – ideal for ID threads.
- Maximize tool life and improve thread quality with variable shim angles that enable proper cutting geometry for high helix angle and reverse helix angle threading.
- Get more parts per insert with the economy of the LT insert's three cutting edges.

New KENNA UNIVERSAL Inserts

- Provide outstanding utility and value with precision molded LT-K thread form.
- Achieve excellent chip control
- Trouble-free threading with new KU25T grade
- Ideal for a variety of workpiece materials

KENNA UNIVERSAL – LT Threading

5 Easy Steps to Improve Productivity

What you need to know:

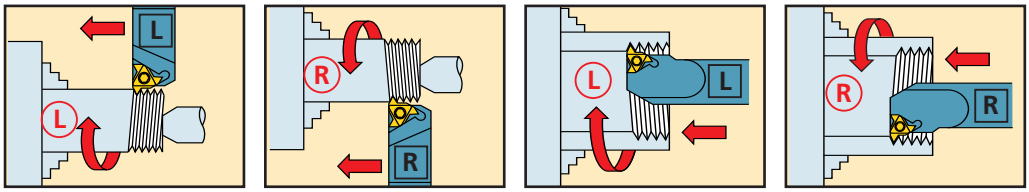
- external/internal operation
- spindle rotation/hand of thread
- feed direction

1st Step – Select Threading Method and Hand of Tooling

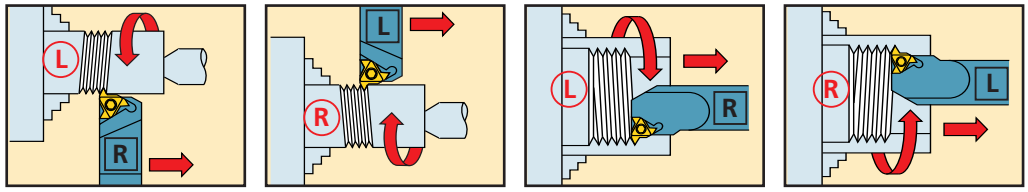
(L) or (R) – hand of thread

[L] or [R] – hand of holder/insert

• Feed direction toward the chuck – standard helix



• Feed direction away from the chuck – reverse helix



2nd Step – Choose Insert for Application

- See threading insert overview on page A98.
- Select cresting inserts for fully controlled thread form including diameter. Cresting inserts eliminate the need for deburring and are optimized for the best tool life at that pitch.
- Non-cresting partial profile inserts offer the flexibility to cut a variety of thread pitches with one insert.
- Note insert size for toolholder selection.

Insert Size	catalog number	KU25T
11	LT11NRA60K	●
16	LT16NRAG60K	●

3rd Step – Select Grade and Speed

Recommendations for Grade and Speed Selection – sfm (m/min)

Workpiece Material		Steel	Stainless Steel	Cast Iron	Non-Ferrous Metals	High-Temp Alloys
KENNA UNIVERSAL	Insert Style	-K Chipbreaker 				
	Selection	KU25T 80 - 450 (25 - 140)	KU25T 80 - 350 (25 - 100)	KU25T 100 - 360 (30 - 110)	KU25T 100 - 1000 (30 - 300)	KU25T 35 - 280 (10 - 85)

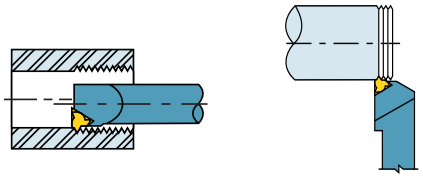
4th Step – Select Holder from Catalog Page

Note: The insert size must match the gage insert size of your toolholder selection:

Required information:

- external/internal operation
- minimum bore diameter (for internal operations)
- hand of tool
- insert size (gage insert)

Select the appropriate holder for the insert size and hand



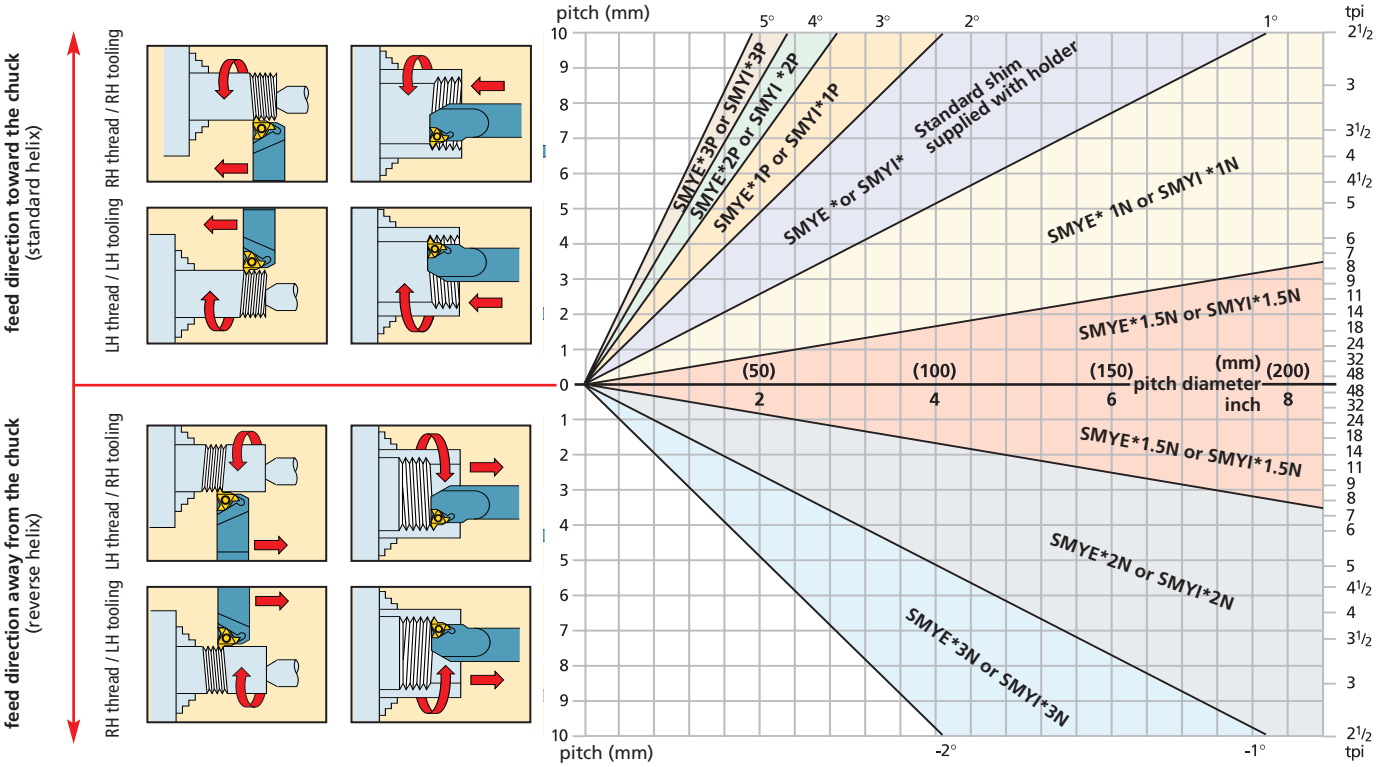
catalog number	gage insert	min. bore diameter	shim
S1212LSER3	LT16NR	.90 in	SMYI3
A2020LSER16	LT16NR	16 mm	SMYI3

5th Step – Select Appropriate Shim

Required information:

- thread form (tpi or pitch)
- pitch diameter
- helix method (hand of tool, feed direction, hand of thread)

Select the proper shim SMYE... for external RH or internal LH
SMYI... for internal RH or external LH



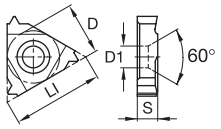
*denotes shim size: 3 = insert size 16 (3/8 in. D)
4 = insert size 22 (1/2 in. D)

If recommended shim is different from shim supplied with toolholder, order shim separately.

For additional technical support, visit www.kennametal.com or contact your Kennametal representative.

LT Threading – Insert Identification System

insert size	LI (mm)	D (inch)	D (mm)	S (inch)	S (mm)	D1 (inch)	D1 (mm)
11	11,0	.250	6,35	.126	3,20	.128	3,25
16	16,5	.375	9,52	.143	3,63	.155	3,94



ER – external right hand

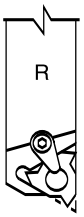
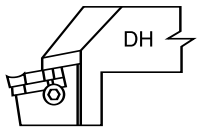
right hand



4. Hand of Tool

R



5. Drop Head

2525K (metric)

16 (inch)

Metric:
Shank height and width in mm and holder length according to ISO standard

Inch:
This position will show a significant two-digit number that indicates the holder cross section. For shanks 5/8" square and over, the number will represent the number of sixteenths of width and height. For shanks under 5/8" square, the number of sixteenths of cross section will be preceded by a zero. For rectangular holders, the first digit represents the number of eighths of width, and the second digit the number of quarters of height, except for a toolholder 1 1/4" x 1 1/2", which is given the number 91.

6. Shank Size

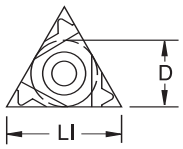
C – qualified back and end, 5" long
D – qualified back and end, 6" long
E – qualified back and end, 7" long
T – qualified back and end, 3.250" long
Q – qualified metric holder

8. Qualified Surface and Length

16 D

3

Size equals number of 1/8-inch increments of IC.



inch insert size	metric insert size	D (inch)	LI (mm)
2	11	1/4	11,0
3	16	3/8	16,5
4	22	1/2	22,0

7. Insert Size

*NOTE: Toolholders with primary shank sizes larger than 1/2-inch or 12 mm are supplied with clamp and insert screw. Secure the insert with either the clamp **or** insert screw. **Do not use both.**

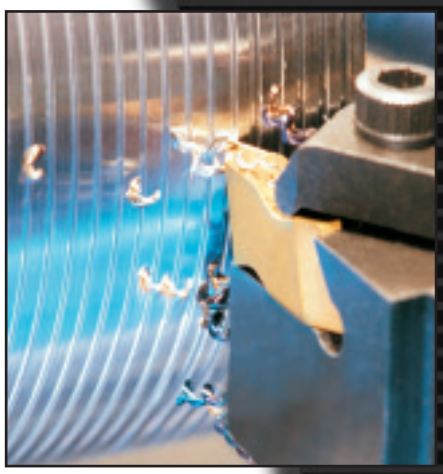
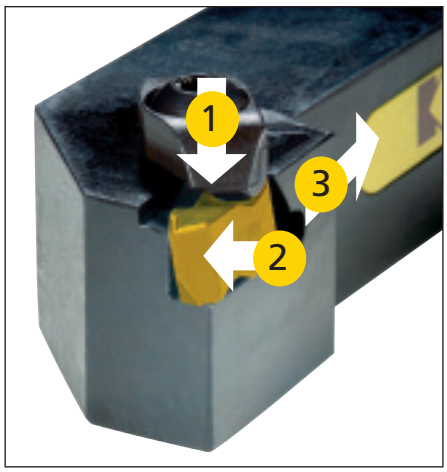
TOP NOTCH Threading

Choosing the TOP NOTCH Threading System

- A superior choice for coarse pitch applications.
- A very rigid insert clamping design assures best tool life, surface finish, and workpiece quality.
- Simplicity of the Top Notch design does not require shim selection for thread helix angles. This helps to avoid mistakes on the shop floor.
- Reduces inventory by using the same Top Notch toolholders and boring bars with either threading or grooving inserts.
- Top Notch chipbreaker inserts eliminate long troublesome coils.
- Rigid clamping design prevents insert movement during high infeed threading applications.





Precision-Ground Thread Form

- minimizes built-up edge
- precisely cuts most common materials
- reduces cutting forces
- ensures accurate high-quality threads

Superior Chip Control

- eliminates long, troublesome coils
- excellent for internal threading operations
- available in partial profile inserts for 60° thread forms

New KENNA UNIVERSAL Inserts

- PVD-coated grade KU25T provides outstanding utility and value
- available in partial profile 60° thread forms both with and without chip control

KENNA UNIVERSAL – TOP NOTCH Threading

4 Easy Steps to Improve Productivity

What you need to know:

- external/internal operation
- spindle rotation/hand of thread
- feed direction

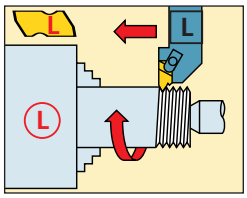
1st Step – Select Threading Method and Hand of Tooling

(L) or (R) – hand of thread

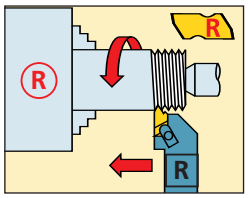
[L] or [R] – hand of toolholder

L or R – hand of insert

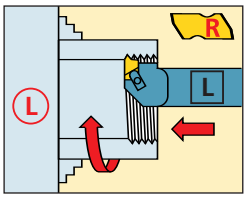
• Feed direction toward the chuck – standard helix



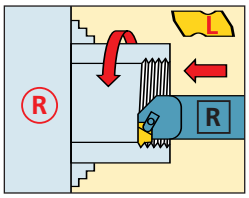
external left-hand thread



external right-hand thread

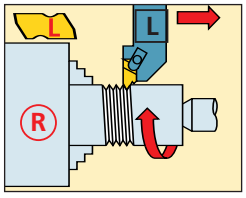


internal left-hand thread

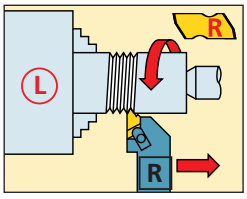


internal right-hand thread

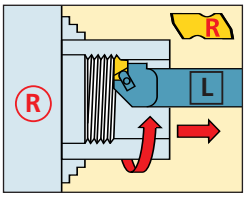
• Feed direction away from the chuck – reverse helix



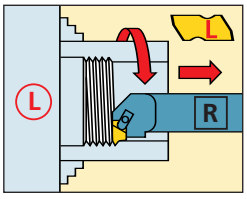
external right-hand thread



external left-hand thread



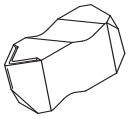
internal right-hand thread



internal left-hand thread

2nd Step – Choose Insert for Application

- Non-cresting partial profile inserts can cut a variety of thread pitches. Chip control is only available with partial profile inserts.
- Note insert size for toolholder selection.



Insert Size	Catalog Number
2	NT-2RK
3	NT-3RK
4	NT-4RK

3rd Step – Select Grade and Speed

Recommendations for Grade and Speed Selection – sfm (m/min)

Workpiece Material		Steel	Stainless Steel	Cast Iron	Non-Ferrous Metals	High-Temp Alloys
KENNA UNIVERSAL	Insert Style	chip control or neutral				
	Selection	KU25T 80 - 450 (25 - 140)	KU25T 80 - 350 (25 - 100)	KU25T 100 - 360 (30 - 110)	KU25T 100 - 1000 (30 - 300)	KU25T 35 - 280 (10 - 85)

To place an order, contact your authorized Kennametal distributor or visit www.kennametal.com.

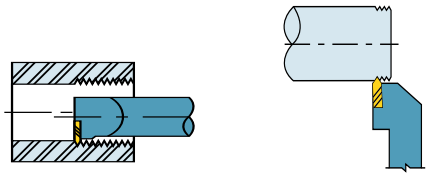
4th Step – Select Holder from Catalog Page

Note: The insert size must match the gage insert size of your toolholder selection:

Required information:

- external/internal operation
- minimum bore diameter (for internal operations)
- hand of tool
- insert size (gage insert)

Select the appropriate holder for the insert size and hand

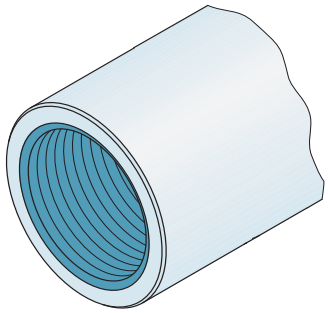


catalog number	gage insert
NSR-163D	N.3R
NSR-164D	N.4R

NOTE: TOP NOTCH toolholders and boring bars are listed with a gage insert to indicate the size and hand required. They are compatible with both grooving and threading inserts of the

TOP NOTCH Threading Example:

application: 8 TPI UN internal
right-hand thread
material: alloy steel
workpiece dia.: 4.5 inch (114,3 mm)
good cutting conditions
feed toward the chuck



Recommendation:

insert: NT3LK
grade: KU25T
insert size:: 3

boring bar: A40NER3 (metric: A50UNNTOR4)
gage insert: N.3L

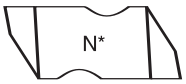
speed: 250 sfm (75 m/min)
infeed passes: 12 passes

See pages A68 for internal threading diameter limit chart.

For TOP NOTCH Threading Toolholders and Boring Bars, see pages A57-A66.

TOP NOTCH Threading – Insert Identification System

*TOP NOTCH



1. Type of Insert

Engineering Your Competitive Edge IN JOB SHOPS

HOLEMAKING

- ***A brand-new grade*** for superior drilling productivity:
  - KU40D
- Just the right combination of Solid Carbide, QPV Spade Blade, and Indexable-Insert Drills – in inch and metric!

INTRODUCING

Kennametal's KENNA UNIVERSAL™ Tooling — brought to you by Kennametal and your local authorized Kennametal distributor...

…specifically designed to enable job shops to grow business, increase profitability, and reduce everyday production worries!

Kennametal understands the unique business needs of today's global job shops.

Let us prove it.

Call us or your local authorized Kennametal distributor for full program details!

Notes: These are starting condition guidelines only. The machine tool, fixturing, toolholding, part configuration, and coolant capability may significantly influence specific applications. Use proper and safe machining practices. Make the set-up as rigid as possible. Decrease speed as material hardness increases.

Grade Description

Grade	
KC7315	**composition:** A PVD TiAlN coated straight 9.5% cobalt submicron grade. **application:** For most steels, gray cast iron, nodular iron, malleable iron, and compacted graphite iron. **geometry:** Heavily honed cutting edges with corner chamfer. Double margin design. Low thrust point.

Notes: These are starting condition guidelines only. The machine tool, fixturing, toolholding, part configuration, and coolant capability may significantly influence specific applications. Use proper and safe machining practices. Make the set-up as rigid as possible. Decrease speed as material hardness increases.

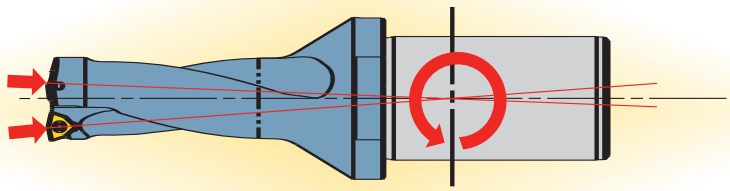
DRILL-FIX Indexable Drills



Our DRILL-FIX product line is one of the most comprehensive in the industry. We'll help you achieve productivity gains with these proven features:

- DRILL-FIX drills are **engineered to optimize insert position**. Feed forces meet at the center of the shank to minimize tool deflection and chatter, and maximize hole accuracy.
- Inch and metric cutting diameters **are standard.**
- New flute profile ensures **excellent chip evacuation**.
- **"X" offset capability** provides added versatility.
- "X" offset is marked on the body **for easy set up**.
- **User-friendly shanks** fit the most popular holding devices.
- **Through-coolant** access is located on both the shank end and side of the drill body for inch applications.
- **New KENNA UNIVERSAL insert grade KU40D** handles demanding metalcutting applications with precision.

Grade Description

Grade	
NEW! **KU40D**	**composition:** A CVD TiN/TiCN/TiN-coated tough alloyed carbide grade with 11.0% cobalt. **application:** KU40D is a universal drilling grade capable of providing consistent performance over a wide variety of drilling applications, such as high-carbon steels; alloy and tool steels; stainless steels; ductile and cast irons; non-ferrous materials; and high-temperature alloys. **geometry:** -GD geometry offers excellent edge strength for general applications, and –MD geometry offers a more positive cutting action.

Kennametal DRILL-FIX DFT Technical Information

Notes: These are starting condition guidelines only. The machine tool, fixturing, toolholding, part configuration, and coolant capability may significantly influence specific applications. Use proper and safe machining practices. Make the set-up as rigid as possible. Decrease speed as material hardness increases.

Ordering Information:

- Drill shipped with insert screws, side pipe plug, and Torx wrench.
- Use with SSF adapters for rotating applications.

DRILL-FIX Offset Capability

Both our inch and metric DRILL-FIX product lines offer the capability of being offset in the “X” direction. That means you can produce hole sizes larger than the nominal size, which will reduce cycle times and eliminate the need for special tools.

DRILL-FIX can be applied in the offset condition, to cut into the solid without any pre-drilling. This can eliminate a boring operation.

To place an order, contact your authorized Kennametal distributor or visit www.kennametal.com.

Catalog number: **DFT030304GD**
Grade: **KU40D**

Kennametal QPV Drills

Quality

- HSS cobalt grades KC100 and KC300 provide longer tool life, better economy.
- Through-coolant capability cools the workpiece and helps evacuate chips.
- Steel bodies are hardened to 40 - 45 HRC for excellent resistance to chip wash and wear.

Performance

- Increased spindle speeds and feed rates mean reduced cycle times compared to conventional HSS drills.
- Good chip control and surface finish ensure quality parts.
- HSS cobalt blades are ideal for difficult deep-hole applications, less rigid machine tools, and slower speeds.
- Two-flat shank design enables easy mounting on the machine tool.

Value

- Low-cost, efficient solution for any metalcutting application.
- Interchangeable with other spade-type drills so upgrading to our QPV drills is easy.
- No need to regrind! Simply replace the worn blades.
- Large selection of blade diameters available to reduce your drill body inventory.
- Straight shank and Morse taper steel body designs available.

Grade Description

QPV Drills HSS Grades and Geometry

Grade	
KC100	**composition:** A PVD TiN coating over a T15 powdered metal cobalt substrate. **application:** A general-purpose drilling grade that provides strength, toughness, and tool security. The PVD TiN coating is relatively tough compared to other coatings and has good resistance to build-up on the cutting edge. PVD TiN coating has better wear resistance compared to uncoated tools. This grade is the primary choice for machining soft, low-carbon steels, free machining steels, copper, and aluminum. **geometry:** The cutting edge is lightly honed.
KC300	**composition:** A PVD TiAlN coating over a T15 powdered metal cobalt substrate. Harder than KC100. **application:** This is a higher productivity grade compared to KC100. The TiAlN coating offers better hot hardness, which often enables higher cutting speeds with equal or better tool life compared to TiN coated tools. This grade is the primary choice for machining harder low-carbon steel, alloy steel, ferritic and martensitic stainless steel, cast iron and high-temp alloys. **geometry:** The cutting edge is lightly honed.

Notes: These are starting condition guidelines only. The machine tool, fixturing, toolholding, part configuration, and coolant capability may significantly influence specific applications. Use proper and safe machining practices. Make the set-up as rigid as possible. Decrease speed as material hardness increases.

Useful Formulas:

kW	=	hp	÷ 1.341022
kN	=	lbs.	÷ 225
Nm	=	ft.-lbs.	÷ .7375621

GPM = gallons per minute
LPM = liters per minute

NOTE: Coolant should be filtered prior to use to approximately 30-50 microns.
Chipping of the insert might occur in applications such as machines with fixed speed lower than recommended, old machines with loose spindles, or interrupted cuts. For these applications, grade KC100 is the recommended choice.

To place an order, contact your authorized Kennametal distributor or visit www.kennametal.com.

Ordering Information:

- Order the blade required for hole diameter.
- Match the blade series number with body series number. See pages B26-B27.
- For application information, see pages B19-B20.

QPV Drill Bodies

Inch – Multiple Cutting Depths

Ordering Information:

- Four drill body length options: short, standard, long, and extra-long.
- Match the body series number with blade series number. See pages B21-B25.
- Insert screw, Torx wrench, and side pipe plug are shipped with body. We recommend ordering extra screws.

QPV Drill Bodies

Metric – Multiple Cutting Depths

Ordering Information:

- Four drill body length options: short, standard, long, and extra-long.
- Match the body series number with blade series number. See pages B21-B25.
- Insert screw, Torx wrench, and side pipe plug are shipped with body. We recommend ordering extra screws.

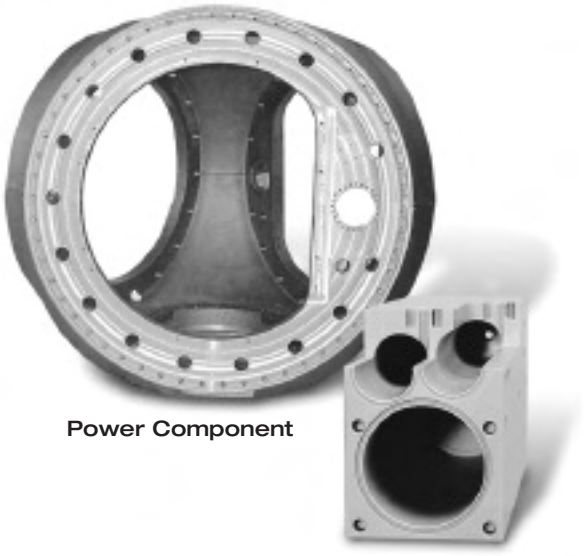
Engineering Your Competitive Edge FOR GENERAL ENGINEERING

Kennametal enables leading general engineering manufacturers to **compete globally**. Every day, in 60 countries worldwide — we deliver the latest **advanced tooling technologies** that drive **total cost savings** to meet tough productivity targets.



Power Component

Medical Component

Let us prove it.

Visit www.kennametal.com or contact your authorized Kennametal distributor.

KENNAMETAL®

ENGINEERING YOUR COMPETITIVE EDGE

Engineering Your Competitive Edge IN JOB SHOPS

MILLING

- ***2 brand-new grades*** for outstanding results in all general milling applications:
  - KUC20M
  - KUC30M
- A ***KSSM Face-Milling*** platform where one insert style works in three different cutters (face, slotting, helical)!
- Plus, a wide variety of inch and metric ***Solid Carbide End Mills***!

Introducing

Kennametal's KENNA UNIVERSAL™ Tooling — brought to you by Kennametal and your local authorized Kennametal distributor...

…specifically designed to enable job shops to grow business, increase profitability, and reduce everyday production worries!

Kennametal understands the unique business needs of today's global job shops.

Let us prove it.

Call us or your local authorized Kennametal distributor for full program details!

NEW!
KUC20M

Coated carbide with a TiN/TiAlN (PVD) coating. KUC20M is engineered to provide better performance in general machining of high-temperature alloys. KUC20M resists breakage, offers improved wear resistance, and increased strength.

NEW!
KUC30M

Coated carbide grade with a PVD multi-layer coating (TiN/TiCN/TiN). New universal carbide grade for milling steel, stainless steel, and high-temperature alloys. KUC30M can be used with or without coolant. Primarily for use in light and general machining.

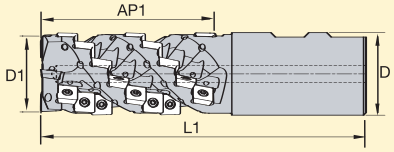
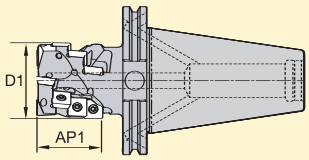
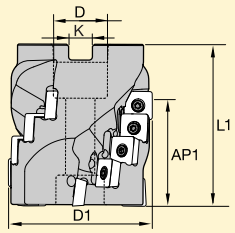
End Mill



CV50 End Mill



Shell Mill



Maximum nose radius of lead insert is .094" for 2.00" and 50 mm cutters, and .125" for 2.5", 63 mm, and above.
All subsequent inserts up the flute should have a maximum nose radius of .031" to avoid lap lines.

Grade Descriptions

Cutting Material	Coating	Composition and Application
K600		Carbide grade made from high quality, micrograin materials for cutting all types of material. Extreme toughness guarantees a controlled wear rate. The micrograin structure permits extremely sharp cutting edges.
KC610M		Coated carbide grade with PVD multilayer coating (TiN/TiCN/TiN). An excellent grade for milling steel, stainless steel, and nodular graphite iron. Because of the resistance to thermal shocks of its substrate, this grade is an excellent choice for wet as well as dry machining.
KC625M		Coated carbide grade with a PVD multilayer coat [TiN/TiCN/TiC(N)]. KC625M is a high performance grade for milling all types of material. Good hardness and wear resistance characterizes this grade. It provides outstanding protection for solid carbide tools against cratering and abrasion. This grade is ideally used with cooling or minimal lubrication.
KC633M		Coated carbide grade with a PVD multilayer coating (TiAlN, TiN, TiAlN). KC633M is a high performance grade for dry milling of all material types. This grade is extremely hard and wear resistant. It provides outstanding protection for solid carbide tools against cratering and abrasion.
KC635M		PVD TiAlN coated carbide on a deformation resistant substrate. Exceptional heat and wear resistance qualities make this grade an excellent choice for milling aluminum, cast iron, heat resistant alloys, steels, and stainless steels in finishing applications.
KC637M		PVD TiAlN coated carbide on a "new" sub-micron carbide substrate. It's a very thin and hard coating that provides outstanding performance in milling hardened materials (50-65 HRC).

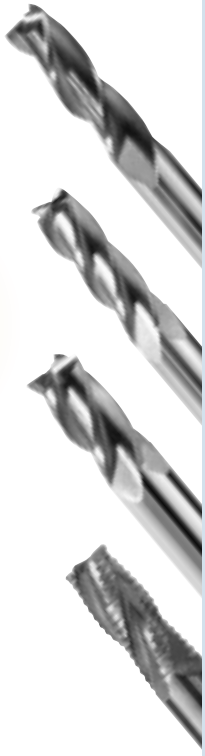
Kennametal Solid Carbide End Mills

No matter what type of workpiece you're milling, Kennametal Solid Carbide End Mills will boost your productivity and profitability – and your overall manufacturing competitiveness!

- Available in grades **KC635M** (for aluminum, cast irons, high-temp alloys, steels, and stainless steels), **KC610M** (for steels, stainless steels, and nodular graphite iron), and **KC633M** (for dry milling of all types of materials)!
- New fine micro grade substrate increases tool life, minimizes deflection!
- General-purpose, single-end, and double-end styles offered!



Order example:
Catalog number: **HHEC125S3**
Grade: **KC635M**

Engineering Your Competitive Edge IN JOB SHOPS

TOOLING SYSTEMS

- Unsurpassed global standard ***Toolholding Systems***!
- Plus, ***KM25***™ — our latest quick-change offering that replaces conventional 1" (or 25mm) square-shank tooling — no machine modifications required!

Introducing

Kennametal's KENNA UNIVERSAL™ Tooling — brought to you by Kennametal and your local authorized Kennametal distributor...

…specifically designed to enable job shops to grow business, increase profitability, and reduce everyday production worries!

Kennametal understands the unique business needs of today's global job shops.

Let us prove it.

Call us or your local authorized Kennametal distributor for full program details!

CV Shank Tools

- Kennametal's "balanced-by-design" CV toolholders meet or exceed ANSI B5.50 specifications and recent standard updates. The detent hole in the shallow drive slot is deepened to a controlled depth. This modification enables the toolholder still to be loaded in the ATC in only one position, but now corrects the unnecessary inherent imbalance of the CV taper flange to significantly reduce spindle wear at higher speeds.
- The 7/24 shank cones are produced to the highest industry standards according to ISO-1947, with a taper accuracy of AT3 or better to provide optimum fit between the spindle and toolholder.
- Essential surfaces are not black-oxide, to provide better fitments.
- All non-critical surfaces are black-oxide, except for the high-performance toolholders.
- Through-coolant is a standard feature when permitted by toolholder design.
- Depending on the application, Kennametal's CV40 and CV50 balanced-by-design toolholders perform effectively up to 12,000 rpm. All other toolholders are effective at speeds up to 10,000 rpm, unless stated otherwise. Kennametal recommends that toolholder assemblies (toolholder, components, retention knob, collets, cutting tools) should be balanced when used at speeds in excess of 10,000 rpm.

IMPORTANT!

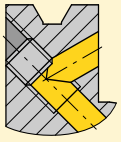
- All critical surfaces must be protected from damage. Neglect from dings and scratches will impair accuracy and performance.
- All assembly components must be clean. Never overtighten the components; this can permanently destroy the function and accuracy of the toolholder.

For retention knobs, please see page D50.

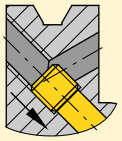
Form B coolant

Some toolholders are equipped with the form B coolant-style feature.

CAUTION!



Toolholders are factory set to the form B coolant supply position. When relocating coolant position screws, use of a removable liquid (small screw thread locker) is recommended.



Possible variation of coolant supply to DIN 69871 form AD; tightening screws will stop coolant from escaping through the flange.

Basic Line

"Basic Line" hydraulic chucks have the same high-quality runout specification of 0,003 (.0001"). Basic Line chucks are balanced-by-design for speeds up to 10,000 rpm. The simple axial back-up screw adjustment of 10,0 (.375") is achieved through the chuck bore the same way as the Trend Line. Larger body diameters give this chuck higher stability along with higher torque transmission (grip) of 300 Nm (220 ft-lb). Please note that the standard SEFAS chamfering ring cannot be used on this chuck design.

BT Shank Tools

- Meets or exceeds JIS B 6339 specifications and all current standard updates.
- The 7/24 shank cones are produced to the highest industry standards, per ISO-1947. With a taper accuracy of AT3 or better, an optimum fit between spindle and toolholder is provided.
- Essential surfaces are not black-oxided, to provide better fitments.
- All non-critical surfaces are black-oxided, except for the high-performance toolholders.
- Wherever the toolholder design allows, through coolant is a standard feature.
- Depending on the application, Kennametal's BT30, BT40, and BT50 "balanced-by-design" toolholders will perform effectively up to 12,000 rpm. All other toolholders are good up to 10,000 rpm unless otherwise stated. Kennametal recommends that in excess of these speeds, the toolholder assembly (toolholder, components, retention knob, collets, cutting tools, etc.) should be balanced.

IMPORTANT!

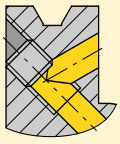
- All critical surfaces must be protected from damage. Neglect from dings and scratches will impair accuracy and performance.
- All assembly components must be clean. Never overtighten the components; this can permanently destroy the function and accuracy of the toolholder.

For retention knobs, please see page D50.

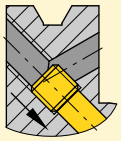
Form B coolant

Some toolholders are equipped with the form B coolant-style feature.

CAUTION!



Toolholders are factory set to the form B coolant supply position. When relocating coolant position screws, use of a removable liquid (small screw thread locker) is recommended.



Possible variation of coolant supply to DIN 69871 form AD; tightening screws will stop coolant from escaping through the flange.

Heat up your profits...Shrink your costs!

- Concentricity less than .0001 (0,003 mm) can be achieved.
- Strong gripping forces...one of the strongest cutting tool clamping systems available today
- Excellent rigidity
- Great for roughing and finishing operations
- Best toolholder design for high-speed machining
- Axial adjustment with through-coolant capability
- If the Kennametal induction heater unit is used properly, one toolholder with 1/4" (6 mm) bore and higher can withstand over 5,000 cutting tool changes.

Taper Size

Realistic tooling decisions need to be made based on your machine's taper size. When choosing cutting parameters, realize that a machine with a 30 taper spindle will not be able to achieve the same heavy cuts or use as large a cutter as a 50 taper machine.

Shown are four-inch diameter cutters mounted to 50, 40, and 30 taper adapters. It's unrealistic to try to achieve the same heavy cut with the 30 taper as you can with a 50 taper.

Order example:
Catalog number: **BT50SM050177**
Order number: **1925470**

DV40 Shank Tools

- Meets or exceeds DIN69871 specifications and all current standard updates.
- The 7/24 shank cones are produced to the highest industry standards, per ISO-1947. With a taper accuracy of AT3 or better, an optimum fit between spindle and toolholder is provided.
- Essential surfaces are not black-oxided, which provides better fitments.
- All non-critical surfaces are black-oxided, except for the high-performance toolholders.
- Wherever the toolholder design allows, through coolant is a standard feature.
- Depending on application and symmetry of toolholder assembly (toolholder, components, retention knob, collets, cutting tools, etc.) DV40 and DV50 toolholders will perform effectively up to 10,000 rpm before the complete toolholder assembly needs to be balanced. At speeds above 10,000 rpm, Kennametal recommends that the toolholder assembly be balanced.

IMPORTANT!

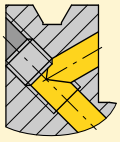
- All critical surfaces must be protected from damage. Neglect from dings and scratches will impair accuracy and performance.
- All assembly components must be clean. Never overtighten the components; this can permanently destroy the function and accuracy of the toolholder.

For retention knobs, please see page D50.

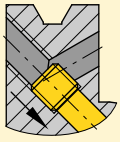
Form B coolant

Some toolholders are equipped with the form B coolant-style feature.

CAUTION!



Toolholders are factory set to the form B coolant supply position. When relocating coolant position screws, use of a removable liquid (small screw thread locker) is recommended.



Possible variation of coolant supply to DIN 69871 form AD; tightening screws will stop coolant from escaping through the flange.

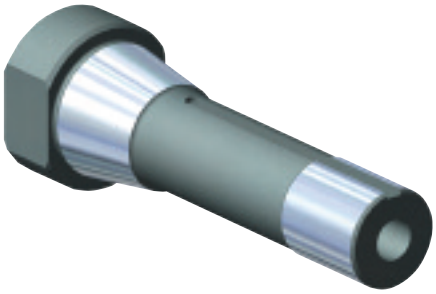
Quick Change 30, 40 & 50 Taper Sizes

- Quick-change (QC) shank design is similar to and interchangeable with NMTB shank tooling.
- Hub at the tail end of the taper cone houses the machine's draw bar bolt.
- Drive flange faces are precision ground to accommodate QC locknuts.
- QC locknuts can be retrofitted to manual-loading milling machine spindles to convert them to quick-change systems.
- Tapers are similar to the 7/24 shank cones of the CV, BT and DV tooling.
- Tapers are manufactured to the highest industry standards per ISO-1947.
- Taper accuracy provides optimum fit between spindle and toolholder.



R8 Taper Shank Tooling

- Locking groove aligns into a locking mechanism when inserted into the spindle.
- Milling machine draw bar bolt draws the tool into the spindle for a secure connection.

Straight Shank Tooling

- Ideal for extending tool to get to those hard-to-reach spots that need machined.
- Use in combination with other toolholder and adapter systems.

General Notes:

- All non-critical surfaces are black-oxide.
- Coolant is standard feature as enabled by toolholder design.
- Collets, QC, R8, and straight shank toolholders perform effectively up to 8,000 rpm, depending on the application and unless stated otherwise. Kennametal recommends the toolholder assembly (toolholder, components, collets, cutting tools) be balanced when operating at speeds higher than 8,000 rpm.
- All critical surfaces need to be protected from damage. Neglect from dings and scratches from cutting edges will impair accuracy and performance.
- Make sure components are clean when assembled.
- Never overtighten toolholders. This can permanently destroy their function and accuracy.

Toolholders and Adapters: Tech Tips

The toolholder and adapter are a crucial component of the complete machining setup, where any problem in this area could ruin a workpiece. Please review the following areas of concern:

Cleanliness

Mounting surfaces of toolholders and adapters must be clean and free of any nicks or gouges that might affect radial and or axial runout.

Storage

Toolholders and adapters should always be stored safely in a dry, clean atmosphere, where the mounting surfaces are protected and not allowed to be damaged by rolling around.

Toolholder and Adapter Length

Always use the shortest possible shell mill, end mill, or collet-style adapter to obtain the best possible rigidity. Deep-pocket milling may require longer adapters, which in turn require lower speed, feed rates, and depth-of-cut to eliminate chatter.

WARNING!

Retention knobs are available in various styles, and are not necessarily interchangeable. At all times the proper retention knob must be used with the appropriate adapter, according to machine specifications as provided by the machine's original manufacturer. Failure to use the correct retention knob, or to adequately install and tighten the retention knob, may result in the adapter coming loose. The use of a combination of metric and non-metric components can result in inadequate coupling of the adapter to the spindle during machining, and a failure of the component. While Kennametal has endeavored to obtain accurate and up-to-date information regarding retention knob selection based on individual machine tool builder specifications, we cannot guarantee that the information and specifications contained in this catalog are complete and that they have not been modified or superseded by the manufacturer. **You, the machine tool operator, are ultimately responsible for proper selection and use of retention knobs.** The purchase of retention knobs from Kennametal is subject to Kennametal's Standard Terms and Conditions of Sale.

KENNAMETAL®

KM25

Modular Quick-Change Tooling

- most economical modular quick-change tooling system available
- reduces downtime, increases productivity
- replaces conventional square-shank tooling
- no machine modifications required
- ideal for machines up to 30 hp (22kW)

KM25 Calculation Example	Conventional	KM25 Quick-Change
number of set-ups per shift	1	1
number of tools per set-up	6	6
time per tool for set-up (minutes)	5	0.5
number of insert indexes per shift	6	6
insert indexing time (minutes)	5	0.5
number of measuring cuts per shift	6	0*
measuring cut time (minutes)	5	5
number of shifts per year	240**	240**
minimum cost per hour	75	75

Result	Conventional	KM25 Quick-Change	SAVINGS PER SHIFT (minutes)

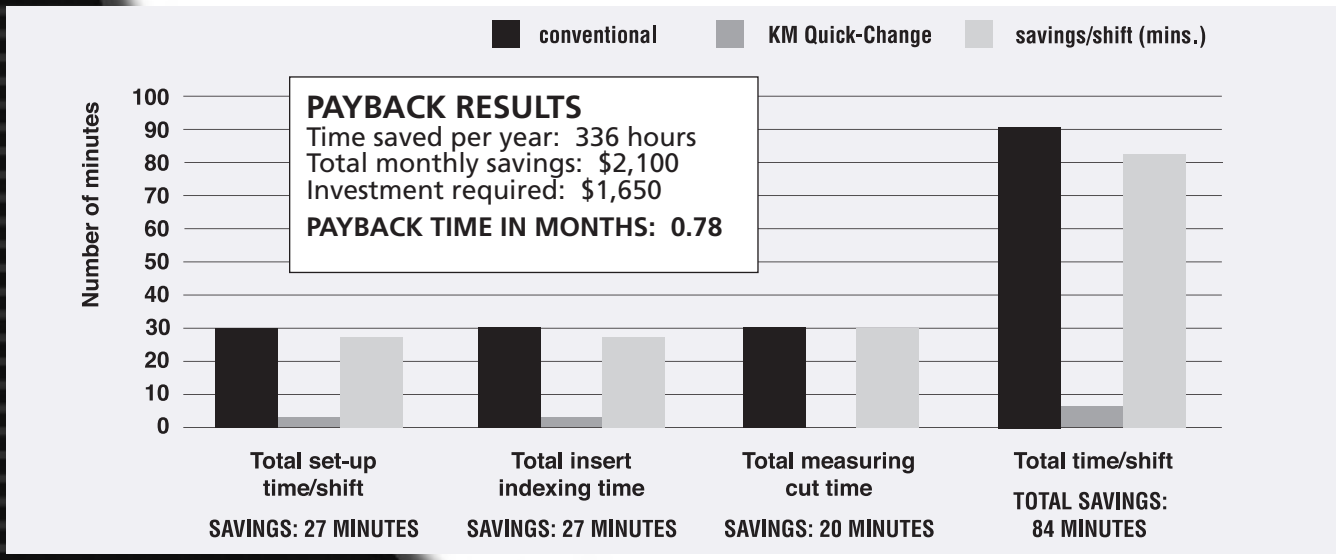
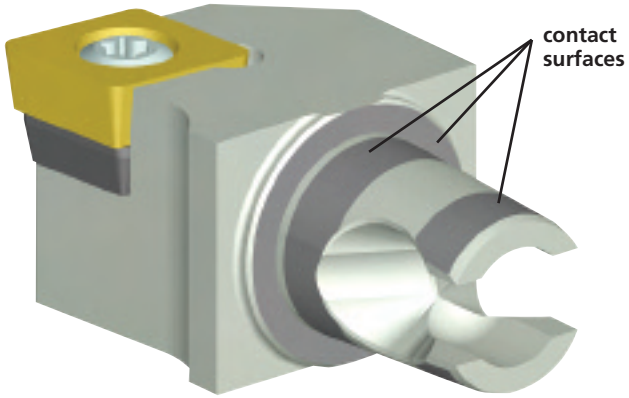
THREE-YEAR SAVINGS WITH KM... $73,950.00!



The KM25 Coupling

The rigidity and stiffness of the patented KM25 joint is achieved through a combination of unique design elements incorporated in both the shank of the tool and the clamping mechanism. The KM25 joint was developed as a system and takes full advantage of both the tool shank and the mechanism to obtain maximum benefit from the space utilized.



Taper Shank

All KM25 tooling is designed around a short 10:1 tapered shank. Extensive testing of many different lengths and angles proves this combination provides the maximum stiffness and input forces required for locking/unlocking. The taper is self-centering to promote easy tool loading and unloading.

Face and Taper Contact

KM25 tooling is designed to have simultaneous taper and face contact. With KM25 tooling, elastic deformation takes the form of expansion of the female taper (on the clamping unit) as the larger male taper (on the cutting unit) is pulled back during lockup. Our testing proved that an optimum combination of pull-back force and elastic deformation (rather than a close tolerance) provides greater static and dynamic stiffness, achieves a metal-to-metal fit, and is less costly to manufacture.

Clamping Mechanism

The mechanism design consists of two components: the torque screw and the wedge nut. This simple, yet highly effective, clamping mechanism enables the user to lock and unlock the cutting unit by simply using a preset torque wrench.

Reliability

The KM25 cutting unit and clamping mechanism are on a shared axis and provide accurate axial and radial repeatability of ± .00008 inch (± 2 micron) for a specific cutting unit in a specific clamping unit.

When more than one cutting unit is used, the accuracy of each cutting unit must be considered. Pre-gaging (when changing tools) measures the deviations of each tool from the nominal. These deviations can then be compensated for by the machine tool control offsets.

Locking Sequence

The clamping sequence starts by inserting the cutting unit into the female taper of the clamping unit. The torque screw is activated by a preset torque wrench at a right angle to the centerline of the cutting tool, located behind the gage face of the clamping unit.

A small amount of elastic deformation takes place at the front of the female taper as the locking force is applied. As the torque screw is tightened to the preset torque of 25-30 ft-lbs (34-40 Nm), (4-1/4 turns), the cutting unit advances until the gage face makes contact with the face of the clamping unit. The final amount of torque applied enables the tail of the cutting unit to spread to clamp securely between the clamping mechanism and the clamping unit inside diameter.

Installation

When first clamping the KM25 shank in a machine tool slot, a cutting unit should be in the shank.

Lubrication

Using a hex wrench, back out the torque screw against the positive stop and generously apply grease to the threads and conical surface of the component hardware. Also, apply grease to the female taper surface. Do this periodically. Recommended grease: Gleitmo 805.

Summary

The KM25 coupling offers a very rigid joint with a high degree of repeatability while maintaining a very compact envelope. This permits a high degree of versatility without sacrificing cutting performance.

KM25 Tooling – Technical Information

Operating Instructions for KM25

To change tooling, the machine operator simply releases the locking system, changes the KM25 cutting unit, and locks the new tool into position. The operator then makes the offset adjustments according to the previously recorded pre-gaged data. This process takes about 30 seconds versus up to 10 minutes, yielding dramatic productivity improvements.

Specific steps in the tool change process:

1. Use shop air to clean the clamping unit/cutting unit.
2. Using the appropriate wrench, turn the torque screw in a counterclockwise direction until it reaches an internal stop.
3. Remove the cutting unit. (Note: If cutting unit does not release, internal stop has not been reached.)
4. Use shop air to clean the clamping unit/cutting unit.
5. Insert the new cutting unit into the taper.
6. Tighten the torque screw by turning it in a clockwise direction, until the required torque specification is achieved.
7. If the machine being used has the ability to pre-gage, adjust machine offsets as required.

Maximum Tangential Load – KM25 Cutting Units

F dimension (mm)	L1 dimension (mm)	tangential load (lbf)	tangential load (kN)

Notes

KENNAMETAL ONLINE
www.kennametal.com for:
- online buying
- contract ordering
- order status
- account status
- check price and availability
- favorites list

APPLICATION SUPPORT
Tech Line
USA and Canada:
800/835-3668
Outside USA and Canada:
724/539-6921
Monday-Friday: 7am-7pm
Saturday: 9am-3pm

MACHINE UTILIZATION
Optimize your machine through:
- quick-change tooling
- tool kit assembly
- tool pre-gauging
- advanced cutting tool materials
- tool location management
- tool sensors

KENNAMETAL UNIVERSITY
To enroll in our unique, five-day application engineering course, call **724/539-6828**.

TOOL MANAGEMENT SYSTEM
