DEFINITION

⚠ WARNING

as used throughout this catalog, serves to alert users to potentially hazardous situations which often occur in the use of these products. Failure to read, understand and follow the accompanying instructions on how to avoid these situations could result in death or serious injury.

HOW TO USE THIS CATALOG

If this is your first venture into slings, we suggest you read "Help" pages 3 through 12 to learn about the different types of slings and general safety rules. When you move on to the section containing your sling type, specific information regarding that type is located there.

If you know the type of sling you need, locate the section by looking for the colored page tab.

Specific ordering instructions are shown in each section of the catalog.

Note: All Dimensions and Specifications are Subject to Change Without Notice. Hardware dimensions are nominal and may vary depending on source. If dimensions are critical to your application, please specify your requirements.

INTRODUCING LIFT-ALL®

Company Profile

Started in 1964, *Lift-All* has grown to be the largest sling manufacturer in North America with over 250 employees working in five manufacturing locations around the United States. Corporate headquarters and the largest facility are located in Landisville, Pennsylvania. Manufacturing facilities and warehouses are strategically located throughout the U.S. Sales representatives cover the entire U.S., Canada and Mexico.

Sound engineering principles, and a serious concern for safety have been the standard by which innovative lifting products have been produced by *Lift-All* for over 40 years.

Lift-All's Mission Statement

Our mission is to be the trusted name in quality lifting and securement products and services by dedicating ourselves to customer satisfaction while providing exceptional value. Our long term success will be accomplished by a skilled workforce, committed to the principles of teamwork, integrity and performance.

Disclaimer of Warranties and Limitation of Liability

Seller warrants that its goods are free from defects in materials and workmanship. Accordingly, Seller's liability is limited to replacing without charge or refunding the purchase price, or making fair allowance for any noncompliance with any specifications or any defects in materials or workmanship in its products existing at the time of delivery. Seller requires written notice and the return of the product to establish any claim. SELLER MAKES NO OTHER WARRANTY OF ANY KIND WHATEVER, EXPRESS OR IMPLIED, AND ALL IMPLIED WARRANTIES OR MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE WHICH EXCEED THE ABOVE OBLIGATION ARE HEREBY DISCLAIMED BY SELLER AND EXCLUDED. Seller will not be liable for any consequential damages, loss or expense arising in connection with the use or inability whatever, regardless of whether damage, loss, or expense results from any act or failure to act by Seller, whether negligent or willful, or from any other reason.

Throughout this catalog trade names are shown in italic type.

All trade names are the property of *Lift-All* unless specifically identified by footnote as the property of another company.

Why Lift-All?

Lift-All Promotes User Safety

- Safety Seminars and Sling Inspections are available to all sling users.
- *Lift-All* quality assurance procedures produce consistently superior products.
- Warning, inspection and operating practices information is supplied with every order.
- By manufacturing all types of slings, *Lift-All* will, without prejudice, recommend the best sling for the application.
- Traceability of all slings through serial numbers.

Lift-All Saves You Time

- *Lift-All* is the only source that can manufacture all of your sling needs.
- Our engineering staff can design the slings or lifting devices needed for special lifting applications.
- Local manufacturing and warehousing from five U.S. locations assures prompt delivery.
- *Lift-All* trained distributors are well qualified to assist the user in sling selection and application decisions.

Lift-All Saves You Money

- Our combination of uncompromising product quality, service and technology makes *Lift-All* your best choice in long term value.

SLING INSPECTIONS

Sling Inspection Services

OSHA regulations require that all chain slings receive a thorough inspection at least once per year by a competent person. You now have the opportunity to have a thorough, documented inspection performed by a factory trained *Lift-All* representative. Chain slings, wire rope slings, web slings, roundslings and wire mesh slings all can be inspected in one survey by a representative from the only company that makes them all - *Lift-All*.

The Inspection Procedure

Each sling is individually recorded and reported by location, serial number (if available), size, type, reach and condition.

If desired, we will affix a warning to those slings found to be damaged.

A Sling Survey Report will be printed and submitted to you for your records, showing the above information along with any recommendations we may have for improving your sling life and lifting safety.

If you wish to repair or replace any of the damaged slings, we will provide cost estimates to do so.

Sling Inspections not only help to insure safe lifting equipment but also increase employee awareness of sling safety, creating a safer workplace for all.

To inquire about or arrange for your Sling Inspection, please call our directed toll free phone number (800) 909-1964.

SLING SELECTION

Which Type of Sling Should I Choose?

General Use of Different Types of Slings

Synthetic Slings - Both Web Slings and Roundslings are used where loads must be protected from damage. The weight and flexibility of synthetic slings reduce fatigue and strain on riggers. *Tuflex* Roundslings, with their color coded capacities, and ease of use and inspection, are rapidly gaining in popularity.

Wire Rope Slings - The most common and lowest cost per ton of lift of all slings. Used in the construction industry and other industries where heavy loads and rugged conditions exist.

Chain Slings - Alloy chain slings combine superior strength, ease of handling and durability. The combination of heavy loads, elevated working temperatures and severe lift conditions usually dictate that an alloy chain sling be used. Typical chain sling applications are found in steel mills, foundries, and heavy machining operations requiring repetitive lifts.

Mesh Slings: Wire and Chain - These slings excel in lifting objects that are hot or have sharp edges, such as bar stock or plate steel. Mesh slings greatly enhance load balancing due to their wide load bearing surface. Machine shops and steel warehouses typically have good applications for mesh slings.

GENERAL OSHA AND MANUFACTURER REQUIREMENTS FOR ALL SLINGS

⚠ WARNING

Read Definition on page 3

Safe Operating Practices

- Inspect slings prior to each use and do not use if damaged. (See specific sling type for inspection criteria.)

- Loads must be rigged to prevent slippage.

- Slings shall be securely attached to their loads

- Slings shall not be loaded in excess of their rated capacities. Rated capacities (Working Load Limits) must be shown by markings or tags attached to all slings.

- Lift must be stable with respect to the center of gravity - balanced.

- Angle of lift must be considered in all lifts. See page 10.

- Slings shall be padded or protected from the sharp* edges of their loads.

* Please note that this is OSHA language. Edges do not need to be "sharp" to cut slings.

GENERAL OSHA AND MANUFACTURER REQUIREMENTS FOR ALL SLINGS

⚠ WARNING

Read Definition on page 3

- Do not point load hooks - center load in base of hook.

- Hands and fingers shall not be placed between the sling and load while the sling is being tightened around the load. After lifting, the load should not be pushed or guided by employees hands directly on the load. Ropes or "tag lines" should be attached for this purpose.

- Suspended loads shall be kept clear of all obstructions.
- All persons shall be kept clear of loads to be lifted, and suspended load.

- Do not shock load. Jerking the load could overload the sling and cause it to fail.

GENERAL OSHA AND MANUFACTURER REQUIREMENTS FOR ALL

⚠ WARNING

Read Definition on page 3

- A sling shall not be pulled from under a load when the load is resting on the sling. Before a load is lifted, a place should be prepared where it is to be put down. Lumber can be used to allow space to remove the sling and prevent shifting of the load.

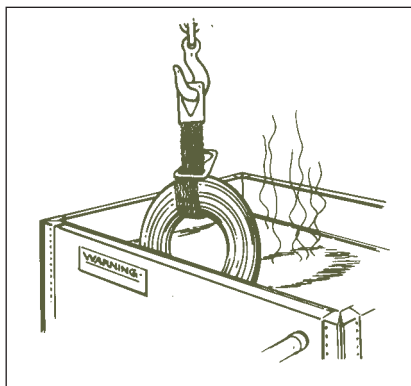

- Sling legs shall not be kinked or twisted.

- Slings shall not be dragged on floor.

- Temperature and chemical environment must be considered (see specific sling types for data).

- Slings shall be stored in cool, dark, dry areas, preferably on racks.

- Slings shall not be shortened with knots, bolts, or makeshift devices.

INSPECTION

⚠ WARNING

Read Definition on page 3

Daily Inspection

Each day before using, the sling, all fastenings and attachments shall be inspected for damage or defects by a competent person designated by the employer. Additional inspections shall be performed prior to each use where severe conditions warrant. Damaged or defective slings shall be immediately removed from service.

Periodic Inspection

OSHA specifies that alloy steel chain slings shall have a thorough periodic inspection by a competent person at least once every 12 months. *Lift-All* recommends that all slings have a thorough inspection by a competent person at least once every 12 months. These inspections must be recorded and maintained for each individual sling. See the following pages for specific

inspection recommendations: Web Slings: 16 & 17, *Tuflex* Roundslings: 44 & 45, Wire Rope Slings: 61, *LiftAlloy* Chain Slings: 86 & 87, Roughneck Mesh Slings: 98, 100 & 102, Lifting Beams and Custom Devices: 113. The warning sheets that accompany each order must be read and understood by all sling users. See sling abuse illustrations in their respective section of this catalog.

In some instances, it is possible to repair slings, proof test and return them to service. Damaged components and sections of chain or wire mesh can be replaced. Hooks, links and other components that are in good condition can be salvaged from a damaged web or round sling, rewedded, proof tested by *Lift-All* and returned to service.

Repair

Lift-All strongly advises that damaged slings be repaired only by the manufacturer.

PHYSICAL FACTORS

⚠ WARNING

Read Definition on page 3

Physical Factors Affecting Strength of Slings

Your care in the use and handling will prolong sling life significantly. The following physical factors should be considered when using any of the slings in this catalog:

1. Cutting of synthetic slings, Nicking or Gouging of steel slings. Probably the number one cause of sling failure. Usually caused by a sharp or small diameter load edge against the sling. It can be prevented with proper padding.
2. Improper Loading - Shock Loading, unbalanced loading, over loading and inadequate consideration for the effect of angle factors can adversely affect safety. Make sure the load weight is within the rated capacity of the sling(s) being used for both type of hitch and angle of lift. See "Effect of Angle of Lift" diagrams on page 10.
3. Temperature - Avoid loads and environments where temperatures exceed the limits of the slings being used. All slings can be damaged by excessive heat. See page 14 for Web Slings and *Tuflex* Roundslings, *Keyflex* Roundslings page 51, Wire Rope Slings page 60, *Lift-Alloy* Chain Slings page 84, Roughneck Mesh Slings page 98 & 100.
4. Punctures & Abrasions seriously degrade sling strength. Rough load surfaces and dragging slings on the ground will damage all slings, steel or synthetic. Use proper padding between slings and rough loads. Never drag slings on ground or concrete floors.
5. Foreign Matter - Material such as metal chips and heavy grit can damage web slings, both internally and externally. Both synthetic and steel slings can be damaged by weld spatter and heat from a welding torch. Avoid contact with foreign matter whenever possible.
6. Ultraviolet Light - Nylon and polyester web slings are adversely affected by prolonged exposure to UV light, i.e. sunlight or arc welding. Inspect and remove if slings appear bleached and stiff. Store slings properly when not in use (see No. 7 below).
7. Improper Storage - Even in storage, synthetic and steel slings can degrade if not kept in clean, dry conditions. *Lift-All* recommends hanging slings on a rack. Web sling should be stored in a dark area to avoid unnecessary sunlight/UV degradation.
8. Chemical Environment - Slings exposed to certain chemicals or the vapors of these chemicals can lose some or all of their strength. When using slings in a chemical environment, contact *Lift-All* to assure sling compatibility. See the following pages for specific information: Web Slings: 14, *Tuflex* Roundslings: 14, Wire Rope Slings: 60, *LiftAlloy* Chain Slings: 84, Roughneck Mesh Slings: 98 & 100.

Effect of Angle of Lift on a Sling's Rated Capacity

WARNING

Read Definition on page 3

Using slings at an angle **can become deadly** if that angle is not taken into consideration when selecting the sling to be used. The tension on each leg of the sling is increased as the angle of lift, from horizontal, decreases. It is most desirable for a sling to have a larger angle of lift, approaching 90°. Lifts with angles of less than 30° from horizontal are not recommended. If you can measure the angle of lift or the length and height of the sling as rigged, you can determine the properly rated sling for your lift.

What would be the rating of each sling rigged at this angle?

1. Calculate the Reduction Factor [RF].
 - a. Using the angle from horizontal, read across the Angle Chart to the corresponding number of the Reduction Factor column.
 - OR -
 - b. Divide sling height* [H] by sling length* [L].
2. Reduction Factor [RF] x the sling's rated capacity for the type hitch that will be used = Sling's Reduced Rating.

* Measured from a common horizontal plane to the hoisting hook.

What capacity sling do I need?

1. Determine the weight that the sling will be lifting [LW].
2. Calculate the Tension Factor [TF].
 - a. Using the angle from horizontal, read across the angle chart to the corresponding number of Tension Factor column.
 - OR -
 - b. Divide sling length* [L] by sling height* [H].
3. Lifting Weight [LW] x the Tension Factor [TF] = Minimum Sling Rating for the type of hitch that will be used.

* Measured from a common horizontal plane to the hoisting hook.

Effect of Angle Chart

Reduction Factor (RF)	Angle From Horizontal	Tension Factor (TF)
1.000	90°	1.000
0.996	85°	1.004
0.985	80°	1.015
0.966	75°	1.035
0.940	70°	1.064
0.906	65°	1.104
0.866	60°	1.155
0.819	55°	1.221
0.766	50°	1.305
0.707	45°	1.414
0.643	40°	1.555
0.574	35°	1.742
0.500	30°	2.000

Sling capacity decreases as the angle from horizontal decreases. Sling angles of less than 30° are not recommended.

Reduced Capacity

Example:
 Vertical Choker rating of each sling = 6,000 lbs.
 Measured Length (L) = 6 ft.
 Measured Height (H) = 4 ft.
 Reduction Factor (RF) = 4 (H) ÷ 6 (L) = .667
 Reduced sling rating in this configuration = .667 (RF) x 6,000 lbs. = 4,000 lbs. of lifting capacity per sling

Increasing Tension

Example:
 Load weight = 1,000 lbs.
 Rigging - 2 slings in vertical hitch
 Lifting Weight (LW) per sling = 500 lbs.
 Measured Length (L) = 10 ft.
 Measured Height (H) = 5 ft.
 Tension Factor (TF) = 10 (L) ÷ 5 (H) = 2.0
 Minimum Vertical Rated Capacity required for this lift = 500 (LW) x 2.0 (TF) = 1000 lbs. per sling

Lift Evaluation and Operating Practices

⚠ WARNING Read Definition on page 3

Important Considerations - Before buying or using a sling, know as much as possible about the lift you will make to minimize the potential dangers to personnel, product and property. All of the following items should be evaluated.

Environment

- Crane and load foundation
- Obstruction in path of travel and for head height
- Power lines or other hazards
- Chemical conditions
- Temperature of load and surroundings
- Location of people - away from danger
- Inspect all equipment

Load

- Weight of load
- Center of gravity (drain liquids)
- Pick-up point integrity, including location and number
- Edges that may damage sling
- Abrasive areas that may damage sling
- Secure or remove loose parts
- Structural integrity (bending and crushing)

Rigging

- Type of sling required, including number of legs
- Type of hitch required
- Balance of load and stability, including flexing
- Prevention of load shift and movement against sling
- Angle of lift
- Tag line and spotter requirements
- Plan and procedures

See page 130 for our Lifting Application Worksheet.

Choker Hitch Angles

⚠ WARNING
Read Definition on page 3

When lifting and turning a load using a choker hitch, it is not uncommon to bend the body of the sling around the choker loop and have a severe bend occur around the body at this point.

For choker angles of 120° or less, the choker rating must be reduced by multiplying the corresponding factor times the slings standard choker rating.

Angle of Choke	Factor
Over 120°	1.00
90° - 120°	.87
60° - 89°	.74
30° - 59°	.62
0° - 29°	.49

Sling capacity decreases as choke angle decreases.

Effect of Anchor Shackle Pin or Crane Hook on Sling Eye

⚠ WARNING Read Definition on page 3

Damage to slings can occur if the wrong size pin or hook is used. The width of the pin or hook should never exceed the natural inside width of the eye.

The eye dimension for each type and size of sling are shown in the capacity tables of this catalog. If your pin or hook is large, request an oversized eye for the sling.

Lift-All is dedicated to manufacturing and developing products for material handling that meet or exceed current industry and government requirements (OSHA and ASME B30.9). Ultimately, the life and strength of any sling depends on those who inspect, use and maintain it.

The ASME B30.9 Sling Safety Standard can be obtained from:
ASME Customer Service
Phone: 800-843-2763
www.asme.org

Occupational Safety and Health Administration (OSHA) "Industrial Slings" Regulations are published by the Office of the Federal Register, National Archives and Records Administration - Part 29 1910.184
www.osha.gov

QUALITY AND ENGINEERING SERVICES

Quality Standards

Lift-All insures top quality products through a Quality Program, based predominately on Military Specification MIL-I-45208, which includes:

1. Detailed specifications for each product.
2. Testing of raw material prior to product manufacturing.
3. Random testing of finished products.
4. Proof testing as required (certificates available).
5. Final inspection of products prior to shipment.

Lift-All is dedicated to manufacturing and developing products for material handling that meet or exceed current industry and government requirements, including OSHA and ASME B30.9 for lifting slings. *Lift-All* products conform to the following:

Product Type	Standard /Specification
Cargo Securement	US DOT, FMCSA 393.102, WSTDA
Chain Slings	OSHA 1910.184, ASME B30.9, NACM
Hoists	ASME B30.16, B30.21
Roundslings	ASME B30.9, WSTDA
Webbing Slings	OSHA 1910.184, ASME B30.9, WSTDA
Wire Mesh Slings	OSHA 1910.184, ASME B30.9
Wire Rope Slings	OSHA 1910.184, ASME B30.9

Engineering Services

Fee based engineering services are available for lifting applications or custom product design and review. Contact *Lift-All* for details on this program.

SAFETY IN LIFTING

Safety Video Available

"Safety In Lifting", a 22 minute presentation is available in VCR and DVD format in both English and Spanish. It covers all types of slings: Web, Roundslings, Wire Rope, Chain and Wire Mesh. The Video suggests the best type of sling for common lifting applications, shows safe lifting procedures (in accordance with OSHA and ASME B30.9 guidelines), the proper inspection, care and maintenance of the various sling types, and more. Your in-plant training and safety program may be just a bit easier with some help from *Lift-All*.

Safety Seminar

Lift-All representatives are available to present a "Safety in Lifting" seminar at your location, improving your employees knowledge of slings in general and answering specific questions about your applications.

For details about the Video and/or "Safety in Lifting" Seminars call:
Lift-All at 1-800-909-1964.

Web Slings

WHY LIFT-ALL WEB SLINGS?

Lift-All web slings meet or exceed OSHA, ASME B30.9 and WSTDA standards and regulations.

All of the sling webbing contained in this catalog is recommended for general purpose lifting. Military webbing, sometimes designated as "Mil-Spec", has not been designed for, nor do we recommend it for general lifting applications.

What is the Difference?

Refer to Mil-Spec Webbing Diagram

- Mil-Spec webbing does not have red core yarn warning system.
- Mil-Spec webbing supports the entire load with exposed surface yarns. *Lift-All* sling webbing uses a combination of internal protected yarns and surface yarns.
- Damage to the surface of Mil-Spec webbing causes greater strength reduction of the webbing.

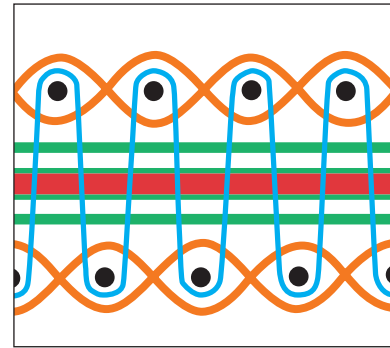

Mil-Spec Webbing

- Combination binder/surface yarns cover each side and carry virtually all of the load.
- Transverse pick yarns inter-relate with binder/surface yarns.

Refer to *Lift-All* Sling Webbing Diagram

- Sling webbing, as shown, has its surface yarns connected from side to side, which not only protects the core yarns, but positions all surface and tensile yarns to work together to support the load.
- Wear or damage to Sling Webbing face yarns cause an immediate strength loss. This is why Sling Webbing has red core yarns to visually reveal damage and act as a basis for sling rejection.

Lift-All Sling Webbing

- Transverse pick yarns inter-relate with binder/surface yarns.
- Woven surface yarns cover each side and carry a portion of the load.
- Strip of longitudinal core yarns bears majority of load.
- Binder yarns secure the surface yarns to web core yarns.
- Red core warning yarns.

ENVIRONMENTAL CONSIDERATIONS

⚠ WARNING

Read Definition on page 3

- Nylon and polyester are seriously degraded at temperatures above 200°F.
- Prolonged exposure to ultraviolet light adversely affects nylon and polyester. Slings become bleached and stiff when exposed to sunlight or arc welding.
- Many chemicals have an adverse effect on nylon and polyester. See Chemical chart (this page).

Chemical Environment Data

General guide only. For specific temperature, concentration and time factors, please consult *Lift-All* prior to purchasing or use.

CHEMICAL	OK NO

Approx. Thickness	Single Ply Rated Capacity Per In. of Width	Available Material	Identify by:	Choose from:
3/16"	1600 Lbs.	Polyester	Blue edge Blue center stripe Silver surface	Daily use under good to rugged lifting conditions. Superior edge cut resistance. Our best seller.*
3/16"	1600 Lbs.	Polyester	Blue center stripe	Daily use under good to moderate lifting conditions. Polyester stretches less for better load control, reduced abrasion.*
3/16"	1600 Lbs.	Nylon	No center stripe	Daily use under good to moderate lifting conditions. Nylon stretches more to help avoid shock loading.*
1/8"	1200 Lbs.	Polyester	Blue center stripe Black yarn one edge	Less frequent use under good lifting conditions. Polyester stretches less for better load control, reduced abrasion.*
1/8"	1200 Lbs.	Nylon	No center stripe- Black yarn one edge	Less frequent use under good lifting conditions. Nylon stretches more to help avoid shock loading.*
5/16"	2000 Lbs.	Nylon	Two black center stripes	Heavy use under moderate to rugged lifting conditions. Abrasion resistant yarns cover entire surface.*
3/16"	1000 Lbs.	Nylon	One black center stripe	Daily use under moderate lifting conditions. Abrasion resistant yarns cover entire surface.*

* **WARNING** Always use Wear Pads to protect synthetic slings from being cut by load edges.(See Page 123 for Wear Pad information)

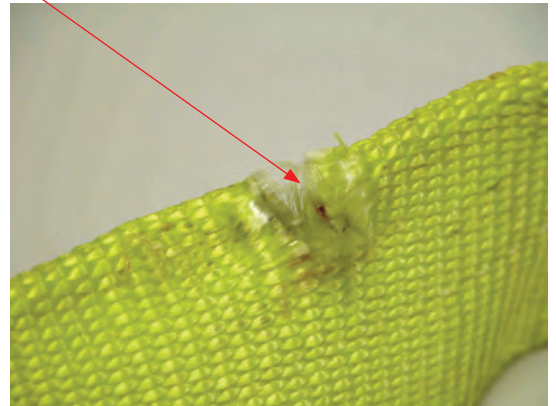

INSPECTION CRITERIA FOR WEB SLINGS

All slings should be inspected for damage prior to each use to assure that their strength has not been compromised. The following photos illustrate some of the common damage that occurs to indicate that the sling should be taken out of service.

THE DAMAGE: Surface and Edge Cuts - It is important to realize that all of the fibers in web slings contribute to the strength of that sling. When there have been a significant number of fibers broken in a web sling, as shown here, that sling should be taken out of service.

WHAT TO LOOK FOR: Broken fibers of equal length indicate that the sling has been cut by an edge. **Red core warning yarns may or may not be visible with cuts and are not required to show before removing slings from service.**

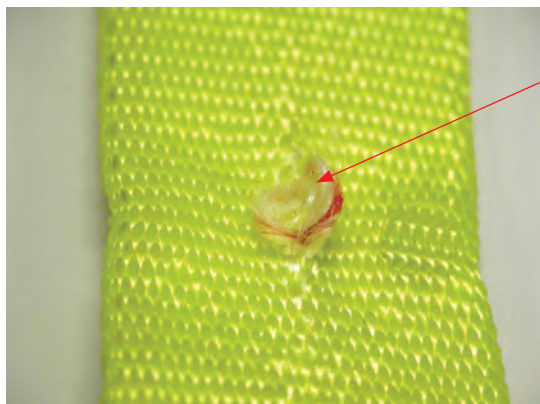

TO PREVENT: Use **wear pads** (see page 123) between the sling and all edges that come in contact with the sling.

THE DAMAGE: Holes/Snags/Pulls

WHAT TO LOOK FOR: Punctures or areas where fibers stand out from the rest of the sling surface.

TO PREVENT: Avoid sling contact with protrusions, both during lifts and while transporting or storing.

THE DAMAGE: Abrasion

WHAT TO LOOK FOR: Areas of the sling that look and feel **fuzzy** indicate that the fibers have been broken by being subject to contact and movement against a rough surface. Affected areas are usually stained.

TO PREVENT: Never drag slings along the ground. Never pull slings from under loads that are resting on the sling. Use wear pads between slings and rough surface loads.

INSPECTION CRITERIA FOR WEB SLINGS

THE DAMAGE: **Heat/Chemical**

WHAT TO LOOK FOR: Melted or charred fibers anywhere along the sling. Heat and chemical damage can look similar and they both have the effect of damaging sling fibers and compromising the sling's strength. Look for discoloration and/or fibers that have been fused together and often feel hard or crunchy.

TO PREVENT: Never use nylon or polyester slings where they can be exposed to temperatures in excess of 200° F. Never use nylon or polyester slings in or around chemicals without confirming that the sling material is compatible with the chemicals being used.

THE DAMAGE: Broken/Worn Stitching in the main stitch patterns of web slings has a direct adverse effect on the strength of a sling. The stitch patterns in web slings have been engineered to produce the most strength out of the webbing. If the stitching is not fully intact, the strength of the sling may be affected.

WHAT TO LOOK FOR: Loose or broken threads in the main stitch patterns.

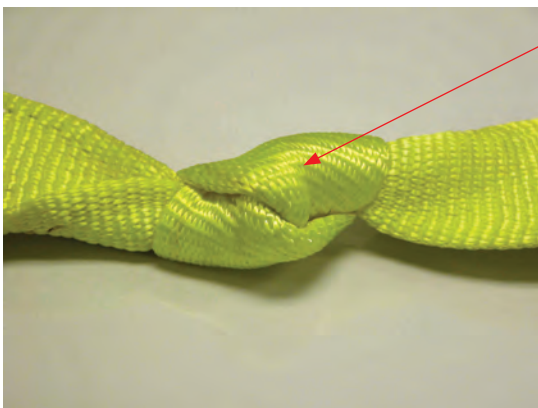

TO PREVENT: Never pull slings from beneath loads where stitch patterns can get hung up or snagged. Never overload the slings or allow the load edge to directly contact the stitch pattern while lifting. Never place a sling eye over a hook or other attachment whose width/diameter exceeds 1/3 the eye length.

THE DAMAGE: Knots compromise the strength of all slings by not allowing all fibers to contribute to the lift as designed. Knots may reduce sling strength by up to 50%.

WHAT TO LOOK FOR: Knots are rather obvious problems as shown below.

TO PREVENT: Never tie knots in slings and never use slings that are knotted.

THE DAMAGE: Illegible or Missing Tags- The information provided by the sling tag is important for knowing what sling to use and how it will function.

WHAT TO LOOK FOR: If you cannot find or read all of the information on a sling tag, OSHA requires that the sling shall be taken out of service.

TO PREVENT: Never set loads down on top of slings or pull sling from beneath loads if there is any resistance. Load edges should never contact sling tags during the lift. Avoid paint or chemical contact with tags.

Red Core Yarns - are an **additional** warning of dangerous sling damage. All standard *Lift-All* Web Slings have this warning feature. When red yarns are visible, the sling should be removed from service immediately. The red core yarns become exposed when the sling surface is cut or worn through the woven face yarns. For other inspection criteria see OSHA/Manufacturer regulations on pages 6 through 8.

STANDARD WEB SLING TYPES

Hardware Slings

Unilink and *Web-Trap* hardware can help to extend sling life by protecting the webbing from abrasion on rough crane hooks. Hardware can often be reused, lowering sling replacement costs.

Type U (UU) - Has the preferred and economical *Unilink* fitting on each end for use in a vertical, choker or basket hitch. *Unilinks* allow choking from either end to save time and vary wear points. See page 22.

Type 1 (TC) - Has a *Web-Trap* triangle and choker fitting on either end. Typical use is in a choker hitch. Can also be used in vertical and basket hitches.

Type 2 (TT) - Has a *Web-Trap* triangle on each end. Normally used in a basket hitch, but can also be used in a vertical hitch. They cannot be used as a choker.

Eye Type

Type 3 (EE) - Flat Eye slings are very popular and can be used in all three types of hitches. They are easier to remove from beneath the load than sling Types 1, 2 and 4. Unless Type 4 is requested, Type 3 will be supplied as the standard EE sling.

Type 4 (EE) - Twisted Eye slings are similar to Type 3 except the eyes are turned 90° to form a better choker hitch. The eyes of a Type 4 nest better on the crane hook.

Endless Type

Type 5 (EN) - Endless slings are versatile and the most economically priced. They can be used in all three types of hitches. The sling can be rotated to minimize wear. The sling legs can be spread for improved load balance.

Reverse Eye Type

Type 6 (RE) - An endless sling with butted edges sewn together to double the sling width. They have reinforced eyes and wear pads on both sides of body and eyes. The result is an extremely strong and durable sling.

Type U

Type 1

Type 2

Type 3

Type 4

Type 5

Type 6

WEB SLING EYE TREATMENTS

Eye Wear Pads - The eyes of web slings are often subjected to the harsh treatment of rough crane hooks. Specialty eye treatments are available to help reduce the wear in that area, thereby extending sling life. The following photos illustrate the more common eye treatments using wear resistant webbing in various forms. Should you want non-standard eye treatment on your eye & eye web slings, please specify using the terminology below.

Type 3 - Flat Eyes

Type 4 - Twisted Eyes

F		Standard Style	T	
G		Lined Bearing Point	U	
H		Fully Lined Eye	V	
I		Wrapped Bearing Point	W	

Textured nylon wear resistant webbing is standard for these eye treatments
Other wear pad materials are available (see page 123).

Tapering Eyes - As a standard practice, the eyes, or bearing points of sling Types 3 and 4 are tapered to accommodate a crane hook on slings that are 3" and wider. Untapered eyes are available upon request. Type 5 (Endless) slings are NOT tapered unless specified on order. Dura-Web 2000 slings are not tapered in any width.

Type 3 - Flat Eyes

Type 4 - Twisted Eyes

Type 5 - Endless
(Showing Taper)

WEB SLING INFORMATION

Sling Length Tolerance for Web Slings

Sling Type	Tolerance *
1 Ply	1.5" + 1.5% of sling length
2 Ply	2.0" + 2% of sling length
3 & 4 Ply	3.0" + 3% of sling length

* For web sling widths wider than 6", add 1/2" to these values. For tighter tolerance or matched set length requirements, please consult with Customer Service.

Anti-Abrasion Treatment

Lift-All recommends that web slings be manufactured from abrasion resistant latex treated webbing. Treatment is standard on both nylon and polyester web slings. Natural, untreated webbing is available upon request.

Note: Heavy duty treatments are available as a supplemental process for greater protection.

Tuff-Tag and Warning Sheet

OSHA requires all web slings to show rated capacities and type of material. The Lift-All Tuff-Tag is made from an abrasion resistant polymer that will remain legible far longer than any leather or vinyl tags. In fact, a Tuff-Tag will consistently outlast the useful life of a sling.

Elasticity - The stretch characteristics of web slings depends on the type of yarn and the web finish. Approximate stretch at RATED SLING CAPACITY is:

	NYLON	POLYESTER	
Treated	10%	Treated	7%
Untreated	6%	Untreated	3%

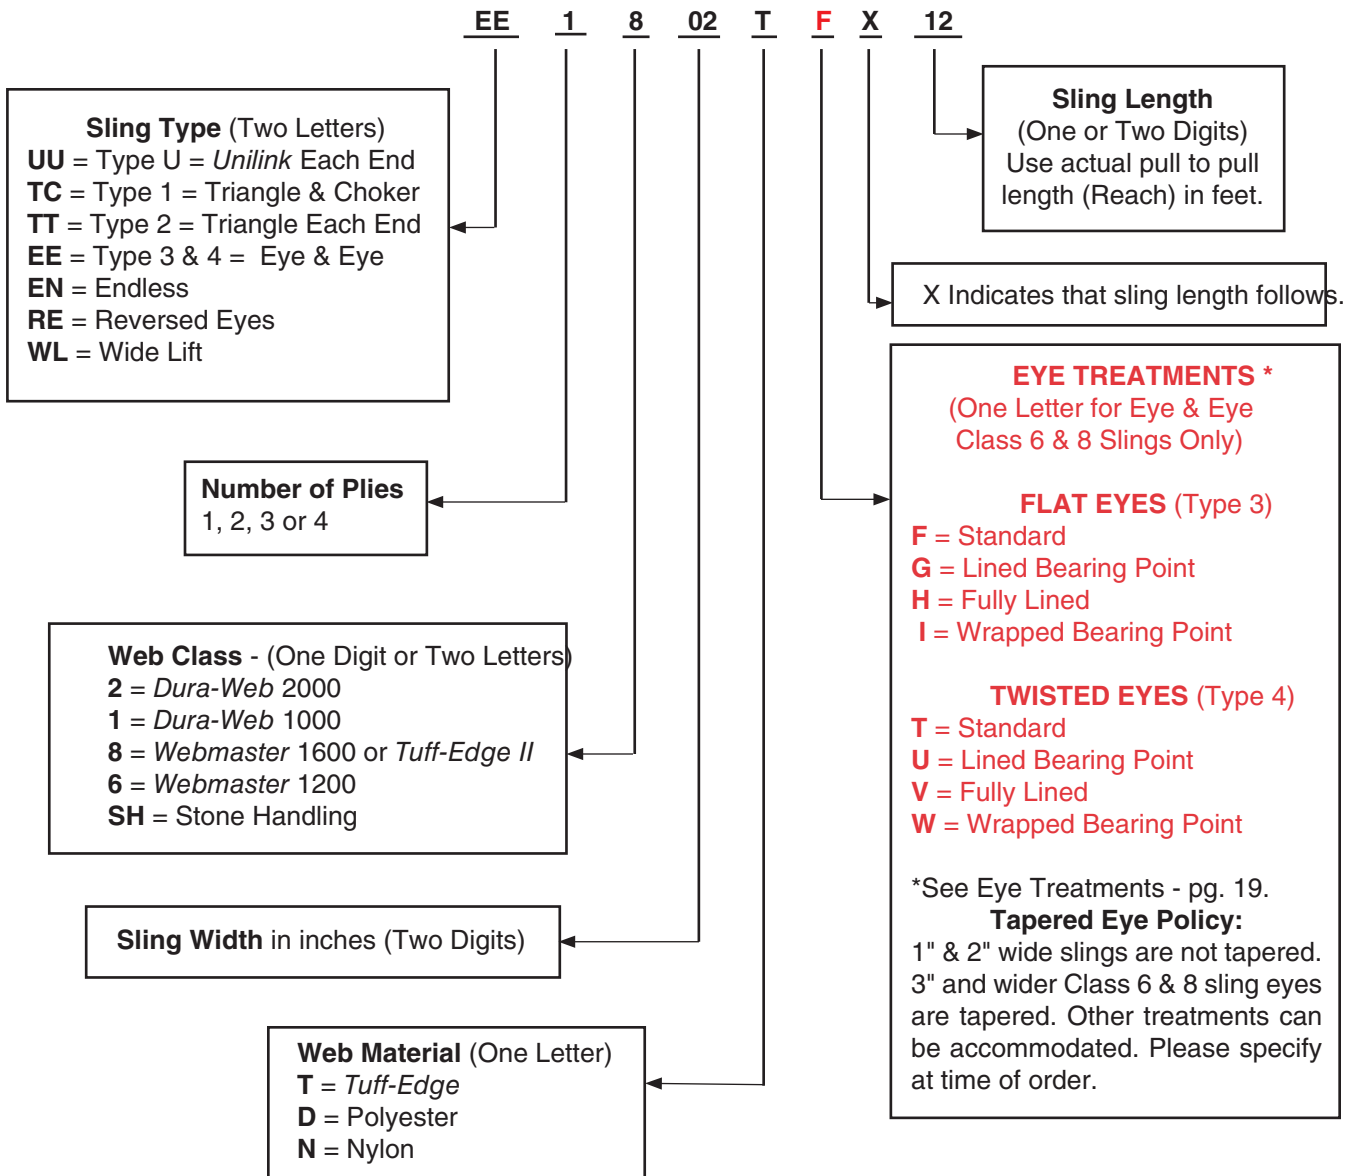

Prior to sling selection and use, review and understand the "Help" section.

A Warning Sheet is included with every web sling order from Lift-All. The sheet lists inspection information and operating practices applying to synthetic web slings.

HOW TO ORDER

We have revised our web sling code to better define the product you are ordering. Changes to our previous web sling code are shown below in red.

WEB SLING HARDWARE

Steel *Unilink* Web Sling Hardware Combination Triangle and Choker Fitting

This forged, high carbon steel fitting, functions as both a triangle and choker.

Features, Advantages and Benefits

Promotes Safety

- Forged steel for strength and reliability
- Smooth rounded profile helps protect sling, worker and load

Saves Money

- May be rewebbed to reduce cost
- Zinc dichromate plated for longer life
- *Unilinks* cost less than triangle/choker combinations

Saves Time

- Large Crane hook opening - speeds rigging
- Positive *Web-Trap* capture - no need to stop and reposition web
- Functions both as a triangle and a choker - choke with either end

Unilink Codes And Specifications

Web Width (in.)	Part No.	Dimensions (in.)				Weight (lbs.)
		L	D	H	Thick	
2	SU2	3 11/16	2	11/16	9/16	1.1
3	SU3	5 1/16	3	7/8	5/8	2.4
4	SU4	6 3/16	4	1	3/4	4.0

Avoid contact of hardware with load edges.
Unilink has the same rated capacities as TT or TC slings.

Forged Aluminum Triangles and Chokers

⚠ WARNING Read Definition on page 3

Aluminum is severely degraded by alkali, caustic environments, acids and salt water.

Aluminum Triangles and Chokers are available but may only be used with single ply web slings within the rated capacities shown in the table. They should not be used with *Dura-Web* 2000 webbing.

Forged from aircraft aluminum, this tough alloy is stronger than mild steel. Aluminum has the advantages of being lightweight, non-sparking and does not rust.

Note: Aluminum triangles and chokers DO NOT offer the advantages of the *Web-Trap* feature. Aluminum fittings are not as durable and cost more than steel.

WEB SLING HARDWARE

Web-Trap Steel Sling Hardware - Triangles and Chokers

A significant improvement in triangle and choker design - featuring positive web capture. Webbing can slip to the side of ordinary fittings, not with *Web-Trap*. These fittings feature alloy steel for lighter sling weight and a zinc dichromate plating to inhibit rust.

Webbing can slip with ordinary fittings.

Web-Trap prevents side shift.

* Unlink is standard fitting - Triangle and chokers available on special order only.

TUFF-EDGE® II

2X Stronger After Abrasion
2X Better Edge Cut Resistance

Tuff-Edge II Polyester Web Slings

You can expect longer sling life and lower overall costs when you switch to **Tuff-Edge II** slings. Resistance to the two properties that can rapidly degrade webbing, abrasion and edge cutting, is greatly improved with the use of our **Tuff-Edge II** webbing.

Using Federal Test Method 191A, **Tuff-Edge II** webbing was tested against standard yellow polyester webbing. After being subjected to the same number of hex bar abrasion cycles, the **Tuff-Edge II** webbing, with its' special silver treatment, achieved average break strengths that were twice that of the standard yellow webbing!

In a test developed specifically to measure edge cutting properties, the cut depth on the **Tuff-Edge II** webbing with special polymer edge yarns cut less than half the depth of the standard yellow polyester without the special edge yarns.

Although you should **always** pad and protect synthetic slings from load edges, normal wear and tear should be greatly reduced when using **Tuff-Edge II**, giving you greater sling life and reduced sling costs.

Tuff-Edge II Features, Advantages and Benefits

Promotes Safety

- Red Core yarn warning system aids in the inspection process
- **Tuff-Tag** provides serial numbered identification for traceability
- Proven sling web construction

Saves Money

- Special polymer coated edge yarns improve edge cutting and abrasion to extend sling life
- Silver colored web treatment fights abrasion for additional sling life
- **Tuff-Tag** provides required OSHA information for the life of the sling, not just the life of the tag

Saves Time

- Easy identification - silver body, blue edges, blue center stripe

Always protect synthetic slings from being cut by corners and edges.

See page 123

--	--

January 4, 2001

We have about 400 slings in use at our Crane & Rigging Training Center in Woodland, WA, along with a major assortment of rigging hardware from almost every major manufacturer in the U.S. In the training center, our participants rig and move loads which are 1 to 6 ton. Most of the loads are rigged with synthetic web slings and some roundslings. We have about 80 LiftAll slings on the property, which are used with our gantry and mobile cranes.

Our rigging takes a beating like everyone else's, even using wear pads on most lifts. Mr. Dave Pelkey, one of our Woodland based trainers helps instruct our students to inspect their slings on a use-by-use basis. As a result of the lift-by-lift, daily, monthly and annual inspections he discovered something that really surprised all of us.

Your Tuff-Edge web slings have an amazing ability to endure heavy usage where other web slings do not. Every training program we watch our students use the Tuff-Edge slings right along with other sling types in reasonably equal amounts. They seem to do a much better job resisting the common types of abrasion, crushing and surface nicking. We seem to be rejecting only 1 Tuff-Edge type sling for every 10 regular synthetic web slings.

Even though we instruct our students to use wear pads, it is not always feasible for every lift. Often slight damage occurs against a semi-smooth surface as a result of high p.s.i. and tightening during the lift. The Tuff-Edge slings seem to survive extremely well, when other slings made of standard nylon or polyester begin to show physical evidence of wear and tear.

Due to our independent place in the crane and rigging industry, we rarely make comments about the products manufactured for general use. In this case, I thought we should at least extend a compliment to the developers and designers of the Tuff-Edge sling. We intend on replacing our inventory with Tuff-Edge slings as the other brands wear out. It will be an excellent investment for us, with a great return. Keep up the good work!

Mike Parnell
President

WRRC & CET are divisions of Industrial Training International, Inc.

Webmaster 1600 Nylon and Polyester* Slings The Traditional Standard for Heavy Duty Slings

This grade of synthetic web sling is popular because most users consider its' strength and service life to be a good buy.

Features, Advantages and Benefits

Promotes Safety

- Red core yarn warning system aids in the inspection process
- *Tuff-Tag* provides serial numbered identification for traceability
- Proven sling web construction

Saves Money

- Yellow treatment for abrasion resistance and extended sling life
- *Tuff-Tag* provides required OSHA information for the life of the sling, not just the life of the tag.

* Note: Polyester web is identified by single blue surface stripe.

THE OHIO BROACH & MACHINE COMPANY
5120 LEPPS INDUSTRIAL PARKWAY • WILLETTSBORO, OHIO 44094 • U.S.A.
 PHONE: 440-948-1000 • FAX: 440-948-1001 • WWW.OHIOBROACH.COM

February 12, 2001

While looking over our current inspection report, it occurred to me that we really haven't been disposing of as many slings as we have in the past. Upon closer review, it appears that most of the slings that Ohio Broach has in service are your silver Tuff-Edge type.

A couple of years back when Ohio Broach started to replace the bad slings with your Tuff-Edge slings, the rejection rate during inspections of our nylon slings was at least in the +50% range. Since then the rejection rate has dropped dramatically. This past year it was as low as 18%.

Having our slings last longer has saved the company money and more importantly, it provides Ohio Broach with a safer work environment.

I would definitely recommend your Tuff-Edge product to anyone who uses nylon slings.

Thank you for your time and efforts that keep our work place safe.

Sincerely,

Neil Van De Motter

 Production Control Manager

	EN4812T	12	80,700	64,500	161,400	EN4812D

Always protect synthetic slings from being cut by corners and edges.

See page 123

Note: Type 5 (Endless) slings are Not tapered unless specified.

***Replace the "D" with an "N" to order nylon.

(See "How to Order" page 21)

⚠ WARNING

Do not exceed rated capacities. Sling capacity decreases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°. Refer to Effect of Angle chart page 10.

Tuflex is an Alternative ...

For three and four ply slings wider than 6", *Tuflex* Roundslings should be seriously considered. *Tuflex* offers increased flexibility, ease of use and lower cost. (See pages 45 through 48.)

DURA-WEB NYLON SLINGS

Best in Abrasion Resistance

Available in two strength classes, all *Dura-Web* slings feature premium abrasive resistant yarns covering all surfaces, for extended sling life and long term value.

Dura-Web Features, Advantages and Benefits

Promotes Safety

- Red core yarn warning system aids in the inspection process
- Striped webbing helps identify proper capacity

- *Tuff-Tag* provides serial numbered identification for traceability

Saves Money

- Abrasion resistant fibers cover both faces and edges for greater sling life

- *Tuff-Tag* provides required OSHA information for the life of the sling, not just the life of the tag.

Saves Time

- Striped capacity for quick identification

Dura-Web 2000 Capacity

Two Black stripes = 2,000 lbs. per inch of width (one ply only). 25% stronger than other webbing. The strongest abrasion resistant sling available.

Eyes of *Dura-Web* 2000 slings for Types 3-4-5 are not tapered in any width.

Dura-Web slings meet or exceed OSHA and ASME B30.9 requirements.

Dura-Web 1000 Capacity

One Black Stripe = 1,000 lbs. per inch of width (one ply only). The only light duty web sling with an abrasive resistant surface. Wider bearing surface, per capacity, helps protect load surface.

Dura-Web slings meet or exceed OSHA and ASME B30.9 requirements.

* **WARNING** Do not exceed rated capacities. Sling capacity decreases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°.

WEBMASTER 1200 SLINGS

Webmaster 1200 Polyester Slings

Standard duty *Webmaster* 1200 is designed as an economical sling for less frequent use.

Webmaster Features, Advantages and Benefits

Promotes Safety

- Red core yarn warning system aids in the inspection process
- Proven sling web construction
- *Tuff-Tag* provides serial numbered identification for traceability

Saves Money

- Wider bearing surface per capacity helps protect load surface
- Yellow treatment for abrasion resistance and extended sling life
- *Tuff-Tag* provides required OSHA information for the life of the sling, not just the life of the tag

Types U, 1 and 2

Types 3(F) and 4(T)

Type 5

Note:

Tapering - Types 3 and 4 slings are tapered at 3" and wider unless otherwise specified.

Type 5 (Endless) slings are NOT tapered unless specified.

* **WARNING**

Do not exceed rated capacities. Sling capacity decreases as the angle from horizontal decreases.

Slings should not be used at angles of less than 30°.

Refer to Effect of Angle chart page 10.

REVERSE EYE SLINGS

Reverse Eye (RE) Slings

The Best General Purpose Web Sling Available

The Reverse Eye Sling is a modified endless sling, reinforced and protected on all sides. The most rugged and versatile of all web slings. The *Lift-All* enhanced version incorporates premium wear resistant webbing for protection on ALL surfaces.

Reverse Eye Features, Advantages and Benefits

Promotes Safety

- Superior choke hitch performance grips load securely
- Reinforced eyes augment strength
- Red core yarn warning system aids in the inspection process
- *Tuff-Tag* provides serial numbered identification for traceability

Saves Money

- Wear resistant web cover offers superior abrasion resistance and sling life
- Reversible eyes reduce wear and increase sling life
- Top grade slings using *Tuff-Edge* webbing are armored on all four sides resulting in the toughest web sling available

Saves Time

- Eyes nest well on crane hook for easy rigging
- Flat eye construction is available to facilitate removal from under loads

There are two grades of *Lift-All* Reverse Eye Slings: *Tuff-Edge* and *Webmaster* 1200.

The Reverse Eye Sling is Not Just an Endless Sling with Wear Pads.

Single Ply Endless with Reinforced Eyes

- A. Extended web length makes 2 Ply eyes.
- B. Reinforcing web piece sewn on to make 2 Ply eye.

Added Wear Pads to Both Sides of Body and Eyes.

- C. Single Ply Endless Sling with butted sides.
- D. Texturized Wear Pads on both sides of eyes.
- E. Texturized Wear Pads sewn on both sides of body.

Completed RE sling may be 1-2 or 3 ply endless sling with reinforcing webbing for each loop, and texturized wear pad on each side of eyes and sling body.

Heavy Duty RE Slings - *Tuff-Edge*

Standard Duty RE Slings - *Webmaster* 1200

Reverse eye slings using *Webmaster* 1600 webbing are available on special order.

* **WARNING** Do not exceed rated capacities. Sling capacity decreases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°. Refer to Effect of Angle chart page 10.

TUFF-EDGE II HARDWARE / BRIDLE SLINGS

Hardware/Bridle Slings

Useful when fixed lifting points are available.

Features, Advantages and Benefits

Promotes Safety

- *Tuff-Edge II* web material is standard - helps prevent sling damage
- Better load control and balance by using fixed fitting points and multiple legs
- Standard oblong links and hooks are forged from alloy steel for strength and reliability
- Red core yarn warning system aids in the inspection process
- Hardware avoids cutting and abrasion of sling at bearing points
- *Tuff-Tag* provides serial numbered identification for traceability
- Proven sling web construction

Saves Money

- Soft web sling legs protect load
- Endless type allows shifting of wear points
- *Tuff-Edge II* material extends sling life
- Sling hooks and links can be rewebbed
- *Tuff-Tag* provides required OSHA information for the life of the sling, not just the life of the tag

Saves Time

- Lighter weight and easier to use than chain or wire rope
- Sling hooks quickly connect to loads having hoist rings or eye bolts

NOTE: Hardware capacities correspond to the appropriate sling capacities.

WARNING

Do not exceed rated capacities. Sling capacity decreases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°. Refer to Effect of Angle chart page 10.

WIDE-LIFT SLINGS

Wide-Lift (WL) Slings

Wide Load Support and Balance

Lift-All Wide-Lift slings support the load over a wide area to offer better balance for large loads - whether heavy or light. Wide bearing area reduces marring of soft load surfaces. Stiffeners are used at the base of the eyes to deter the body webbing from folding down the middle. Wide-Lift slings are for use in basket hitch only. Standard web material is *Webmaster* 1600 nylon. Polyester is available upon request.

All Wide-Lift Slings offer these benefits:

Promotes Safety

- Red Core Yarn warning system aids in the inspection process
- *Tuff-Tag* provides serial numbered identification for traceability
- Proven sling web construction

Saves Money

- Wide bearing area reduces marring of soft load surfaces
- Yellow treatment for abrasion resistance and extended sling life
- *Tuff-Tag* provides required OSHA information for the life of the sling, not just the life of the tag

Attached Eye Wide-Lift

Continuous Eye Wide-Lift

For Light, Bulky Loads - Lifting eyes are attached to a single ply sling body. Available with One Ply eyes (WLA1) or Two Ply eyes (WLA2).

For Heavy Loads - Constructed from one endless sling with the two body lengths butted and joined side by side.

30	WL2830N	90,000	45	120	
36	WL2836N	90,000	54	144	

Note: Not recommended for use in a choker hitch.
Tuff-Edge II may be used for the attached eyes.
 Custom slings with higher capacities are available.
Tufflex slings are also available as Wide-Lift Slings. See page 52.

Do not exceed rated capacities. Sling capacity decreases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°. Refer to Effect of Angle chart page 10.

DRUM HANDLING SLINGS

Lift-All Drum Handling Slings provide an easy, inexpensive way to handle steel drums. Available in two styles to suit your needs for handling drums in the vertical or horizontal position.

Vertical Drum Handling Slings

Easily lift standing drums for transport. Tilt suspended drums to pour from open top or spigot. For use with ribbed steel drums, the ratcheting belly band tightens securely below the first rib.

Lightweight version (**DSV601D**) uses 1" polyester sling webbing and is rated for 300 lb. loads.

Heavyweight sling (**DSV602D**) uses 2" polyester sling webbing and is rated at 850 lbs.

Promotes Safety

- A wear pad, sewn on one side of the lifting strap, helps to avoid cutting of the sling.
- Ratchet tightens securely.

Saves Time

- Free end of ratchet strap sewn to stay properly threaded.
- Vertical legs sewn to belly band to maintain proper position.

Vertical

To Order, specify Part No. and drum diameter in inches. i.e.: **DSV602Dx24**
(The standard 55 gal. drum has a 24" diameter.)

Horizontal Drum Handling Slings

Ideal for the quick and easy moving of steel drums in the horizontal position.

Part No. **DSH601D** uses 1" polyester sling webbing and is rated at 1,500 lbs.

Promotes Safety

- Strong 1" polyester webbing pulls drum hooks securely into rims at both ends of the drum during lift.

Saves Time

- One sling fits multiple size drums.
- Easy to disconnect.
- Uses 1/2" oblong link at top for easy connection to hoist hook.

To Order, specify Part No. **DSH601D**.

Horizontal

Note: If using in a chemical environment, contact *Lift-All* for sling material advice.

STONE HANDLING SLINGS

Stone Handling (SH) Slings

Special abrasion resistant 4-inch nylon webbing for handling stone, concrete and building panels.

Lift-All Stone Handling Slings feature a soft abrasion resistant wear pad woven onto the load side of the webbing, providing outstanding protection for both the sling and the polished stone surfaces.

Note: EE Sling - flat eye only - untapered 12" eye length.

Features, Advantages and Benefits

Promotes Safety

- Red core yarn warning system aids in the inspection process
- *Tuff-Tag* provides serial numbered identification for traceability
- Proven sling web construction

Saves Money

- Heavy, soft yarns on load side to help protect the sling from abrasion
- White pile yarns prevent color transfer to load
- Two ply version results in an abrasion resistant face on both sides
- *Tuff-Tag* provides required OSHA information for the life of the sling, not just the life of the tag

Saves Time

- Two ply version with abrasion resistance on both sides, does not need orientation by rigger

	Part No.			
		Vertical	Choker	V. Basket
One Ply	UU1SH4N	5,400	4,000	10,800
	EE1SH4N	5,400	4,000	10,800
	EN1SH4N	10,800	8,600	21,600
Two Ply	UU2SH4N	9,400	7,000	18,800
	EE2SH4N	9,400	7,000	18,800
	EN2SH4N	10,800	8,600	21,600

⚠ WARNING

Do not exceed rated capacities. Sling capacity decreases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°.

GAS BOTTLE SLINGS

Web Slings

These specialty web slings make for easy and secure lifting of your gas bottle cylinders into position using cranes, hoists, forklifts, etc. Two standard versions are available. **GBS1N** slings automatically adjust to accommodate 9" Dia. x 50" H to 13" Dia. x 39" H bottles. **GBS2N** slings are designed for the convenient tandem lifting of one oxygen and one acetylene bottle as used in most welding operations. Each assembly is rated to lift 1,000 lbs.

The GBS2N slings have the same construction features of the GBS1N slings, but have been designed specifically to lift one each of the standard size oxygen and acetylene bottles commonly used in welding operations.

Tuflex Roundslings

THE TUFLEX DIFFERENCE

All Lift-All slings meet or exceed OSHA and ASME B30.9 standards and regulations.

What is a Tuflex Roundsliding?

It is an endless synthetic sling made from a skein (continuous loop or hank) of polyester yarn covered by a double wall tubular jacket. The roundsliding body can also be compared to sling webbing with the tubular jacket face yarns woven without binder yarns; this allows the core yarns to move independently within the jacket.

Tufhide Jacket

Made from bulked nylon fibers, the double wall *Tufhide* jacket offers better abrasion resistance for our larger capacity *Tuflex* (EN360 and larger). In addition, *Tufhide* reduces the heat buildup that can damage other high capacity roundslings when used in a choker hitch.

Tuflex Roundslings Features, Advantages and Benefits

Promotes Safety

- Light weight reduces fatigue and strain on riggers
- Synthetic materials won't cut hands
- Consistent matched lengths for better multiple sling load control
- No loss of strength from abrasion to cover
- *Tuff-Tag* provides serial numbered identification for traceability
- Low stretch (about 3% at rated capacity) - reduces sling and load abrasion - good for low headroom lifts

- Conforms to shape of load to grip securely
- Load bearing yarns protected from UV degradation
- Red striped white core yarns provide added visual warning of sling damage
- Color coding provides positive sling capacity information

Saves Money

- Double wall cover for greater sling life
- Soft cover won't scratch load surface
- Conforms to shape of load for reduced load damage
- Seamless - no sewn edges to rupture prematurely, requiring removal from service
- EN360 and larger *Tuflex* feature *Tufhide* wear resistant nylon jacket for extra sling life
- *Tuff-Tag* provides required OSHA information for the life of the sling, not just the life of the tag

Saves Time

- Color coded capacities for quick identification
- Light weight and pliable for easy rigging and storage
- Independent core yarns choke tightly, but release easily after use
- Easy to carry - high strength to weight ratio for easy transportation

Construction Comparisons - Sling Webbing vs Tuflex

Sling Webbing

- Transverse pick yarns inter-relate with binder yarns
- Woven surface yarns cover each side and carry a portion of the load
- Strip of longitudinal core yarns bears majority of load
- Binder yarns secure the surface yarns to web core yarns
- Red core warning yarns

Sling Webbing
(Side View)

Sling webbing, as graphically demonstrated, has its surface yarns connected from side to side, to not only protect the core yarns, but to position all surface and tensile yarns to work together to support the load. Wear or damage to Sling Webbing face yarns cause an immediate strength loss. This is why Sling Webbing has red core yarns to visually reveal damage and act as a basis for sling rejection.

Tuflex

- Transverse pick yarns position surface yarns and protect core yarns
- Woven surface yarns also protect core yarns, carry no load
- Longitudinal core yarns carry 100% of load
- Red core warning yarns

Roundsling construction, as shown above, protects all load carrying core yarns from abrasion with an independent, woven jacket. Replacement is not necessary until the red striped white core yarns can be seen through holes in the jacket. When core yarns are visible, sling must be removed from service. *Tuflex* roundslings provide double wall protection for extended sling life.

ENVIRONMENTAL CONSIDERATION

Refer to Page 14

HOW TO ORDER

Ordering *Tuflex* Polyester Roundslings

1. Specify sling Part No. found in the charts throughout the *Tuflex* section
2. Specify sling length in feet (bearing point to bearing point). Refer to footnotes under *Tuflex* tables for specific sling lengths and tolerances.

Endless and Eye & Eye styles of *Tuflex* are made to a tolerance of $\pm 1\%$ of the specified length ($\pm 1"$ minimum tolerance) and can stretch 3% at rated capacity.

Braided *Tuflex* length tolerance is $\pm 5\%$ of the ordered length (sling at rest). At its rated capacity, braided *Tuflex* will stretch approximately 9%.

Note: Matched lengths of slings must be specified at time of order.

Prior to sling selection and use, review and understand the "Help" sections pages 3 through 12.

INSPECTION CRITERIA FOR TUFLEX

Tuflex

All slings should be inspected for damage prior to each use to assure that their strength has not been compromised. The following photos illustrate some of the common damage that occurs to indicate that the sling must be taken out of service.

THE DAMAGE: Cuts to the cover exposing internal core yarns – When internal core yarns are visible, the amount of damage done to the core yarns and the sling strength can not be determined without breaking the sling, therefore, the sling must be taken out of service.

WHAT TO LOOK FOR: Broken fibers of equal length indicate that the sling has been cut by an edge.

TO PREVENT: Use wear pads between the sling and all edges that come in contact with the sling.

THE DAMAGE: Holes/Snags/Pulls exposing internal core yarns.

WHAT TO LOOK FOR: Punctures or areas where fibers stand out from the rest of the sling surface.

TO PREVENT: Avoid sling contact with protrusions, both during lifts and while transporting or storing.

THE DAMAGE: Abrasion exposing internal core yarns.

WHAT TO LOOK FOR: Areas of the sling that look and feel fuzzy indicate that the fibers have been broken by being subject to contact and movement against a rough surface. Affected areas are usually discolored.

TO PREVENT: Never drag slings along the ground. Never pull slings from under loads that are resting on the sling. Use wear pads between slings and rough surface loads.

INSPECTION CRITERIA FOR TUFLEX

THE DAMAGE: Heat/Chemical

WHAT TO LOOK FOR: Melted or charred fibers anywhere along the sling. Heat and chemical damage can look similar and they both have the effect of damaging sling fibers and compromising the sling's strength. Look for discoloration and/or fibers that have been fused together and often feel hard or crunchy.

TO PREVENT: Never use *Tuflex* where they can be exposed to temperatures in excess of 200°F. Never use *Tuflex* in or around chemicals without confirming that the sling material is compatible with the chemicals being used. For elevated temperatures up to 350°F, ask about our KeyFlex roundslings.

Tuflex

THE DAMAGE: Illegible or Missing Tags –The information provided by the sling tag is important for knowing what sling to use and how it will function.

WHAT TO LOOK FOR: If you cannot find or read all of the information on a sling tag, the sling shall be taken out of service.

TO PREVENT: Never set loads down on top of slings or pull slings from beneath loads if there is any resistance. Load edges should never contact sling tags during the lift. Avoid paint or chemical contact with tags.

THE DAMAGE: Knots compromise the strength of all slings by not allowing all fibers to contribute to the lift as designed.

WHAT TO LOOK FOR: Knots are rather obvious problems as shown here.

TO PREVENT: Never tie knots in slings and never use slings that are knotted.

THE DAMAGE: Cuts to the cover NOT exposing internal core yarns –*Tuflex* roundslings all have a double walled jacket protecting the inner core yarns from damage. If damage (except for chemical or heat) appears only to the outer jacket and does not expose the inner core yarns, the sling may remain in service. To extend sling life, the sling may be returned to Lift-All for inspection and application of a patch to cover the damaged area.

WHAT TO LOOK FOR: Broken fibers of equal length indicate that the sling has been cut by an edge. In this case, the inner jacket remains intact.

TO PREVENT: Use wear pads between the sling and all edges that come in contact with the sling.

TUFLEX ENDLESS ROUNDSLINGS

Tuflex Endless (EN)
The Most Versatile Tuflex Roundsliding

Features, Advantages and Benefits

Maintains all the basic Tuflex features plus...

Promotes Safety

- Load stability and balance can be achieved by spreading sling legs.

Saves Money

- Wear points can be shifted to extend sling life
- The most flexible style of sling

Part No.	Color	Rated Capacity (lbs.)*			Minimum Length (ft.)	Approximate Measurements

 + Shorter lengths available using reduced eye lengths.

BRAIDED TUFLEX ROUNDSLINGS

For the ultimate in big loads - (up to 612,000 lbs. in a vertical basket)
or for the security of multiple part sling lifting.

Tuflex

Redundant Safety

Tuflex braids are made from three [6 part] or four [8 part] individual Tuflex. Should one of these component slings be damaged while in use, the remaining undamaged slings should be able to safely return the load to the ground.

6 Part Flat Braid (B6E)

Braided Tuflex Features, Advantages and Benefits

Maintains all the basic Tuflex features plus ...

Promotes Safety

- Braided construction offers redundant safety
- User friendly compared to steel slings

Saves Money

- Large capacity slings are generally purchased for one major lift, then rarely used again. Braided Tuflex can be disassembled into component slings for general purpose lifting, if individual slings are correctly tagged.
- Can be returned for disassembly, inspection and retagging as individual slings.

Saves Time

- Easy to transport and hook-up

+ Shorter lengths available using reduced eye lengths.

BRAIDED TUFLEX ROUNDSLINGS

Order Information

Ordering length should be based on sling at rest.

Braided *Tuflex* length tolerance is $\pm 5\%$ of the ordered length (sling at rest).

At its rated capacity, braided *Tuflex* will stretch approximately 9% and have a length variance of $\pm 2\%$.

⚠ WARNING

Do not exceed rated capacities. Sling capacity decreases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°. Refer to Effect of Angle chart page 10.
 ** This is the smallest recommended connection hardware diameter to be used for a vertical hitch.
 + Shorter lengths available using reduced eye lengths.

THE STRONGEST AND LIGHTEST SLINGS IN THE WORLD

Rigging injuries decrease when lighter, less cumbersome slings are used. Light, flexible **KeyFlex™** Roundslings help prevent injuries.

Tuflex

Sling Weights per Capacities

On the average, **KeyFlex™** Roundslings are:

- 53% lighter than **Tuflex™** Roundslings,
- 82% lighter than Wire Rope Slings,
- 89% lighter than G80 Chain Slings

The chart at the right plots the weights of 20 ft. long slings at various capacities:

Sling Type	Vert. Rating	Weight
KeyFlex™	90,000 lbs.	42 lbs.
Tuflex™	90,000 lbs.	86 lbs.
Wire Rope	88,000 lbs.	357 lbs.
Chain	72,300 lbs.	358 lbs.

KeyFlex™ Benefits:

- Lowest weight per capacity reduces risk of back and other injuries to riggers.
- Low stretch (1% at rated capacity) reduces elastic bounce for better load control – allows for use in most low headroom situations – reduces sling and load abrasion.
- Aramid load yarns allow sling use up to 350° F versus 200° F for other synthetics.
- Lightweight and compact size promotes speedier rigging, transport and storage when compared to any other type of sling.

YOUR KEY TO LIFTING HEAVY LOADS USING THE LIGHTEST, MOST FLEXIBLE SLING AVAILABLE !

KeyFlex™ Roundslings Share Most of the Benefits of Standard Tuflex™ Roundslings

Promote Safety

- Synthetic materials won't cut hands
- Consistent matched lengths for better multiple sling control
- No loss of strength from abrasion on double walled jacket
- *Tuff-Tag*™ provides serial numbered identification for traceability
- Conforms to shape of load to grip securely
- Load bearing yarns protected from UV degradation
- Contrasting color core yarns provide visual warning of sling damage
(*KeyFlex*™ : Orange jacket, Gold Core Yarns)
- Endless style promotes load stability by spreading sling legs

Inspection Criteria

Remove from service when:

- Cuts to sling cover expose gold core yarns
- Holes, tears, snags or abrasion expose gold core yarns
- End fittings are pitted or corroded, cracked, distorted or broken
- The sling shows signs of melting, charring or chemical damage
- Capacity tag is illegible or missing
- Other visible damage that causes doubt as to strength of the sling

Environmental Considerations

- CHEMICAL - Do not use in a chemical environment without first contacting the Lift-All engineering department at 717-898-6615. Please provide specific chemical, concentration, temperature and time factors.
- TEMPERATURE –*KeyFlex*™ are approved for use up to 350° F.

Saves Time

- Independent core yarns choke tightly, but release easily after use

Saves Money

- Double wall cover for greater sling life
- Soft cover won't scratch load surface
- Conforms to shape of load to reduce load damage
- Seamless – no sewn edges to rupture prematurely, requiring removal from service
- *Tuffhide* wear resistant nylon jacket for extra sling life standard KEN60K and larger sizes
- *Tuff-Tag* provides required OSHA information for life of the sling, not just the life of the tag
- Wear points can be shifted to extend sling life
- Endless version is the most versatile style of sling
- *KeyFlex*™ Roundslings with damaged covers may be returned to our factory for inspection and possible repair and proof test.

Tuflex

Ordering Information

Specify the sling code and length in feet (bearing point to bearing point).

KeyFlex™ are made to a tolerance of $\pm 1\%$ of the specified length ($\pm 1''$ minimum tolerance) and can stretch 1% at rated capacity.

Note: Matched lengths of slings must be specified at time of order. Available in endless style only.

* **WARNING** Always protect Roundslings from being cut or damaged by corners, edges or protrusions. Refer to wear pads section, page 123 for available protective devices.

WIDE-LIFT TUFLEX

WIDE-LIFT TUFLEX

Wide Load Support and Balance

Wide-Lift *Tuflex* slings distribute the load over a wide area and offer better balance of larger loads - whether heavy or light.

Tuflex Wide-Lift Features, Advantages and Benefits

Maintains all the basic *Tuflex* features plus ...

Promotes Safety

- Wide body distributes load over wide area and offers better balance

Saves Money

- Bearing point of eyes can be shifted to prolong sling life
- Custom sizes available to fit your needs

Saves Time

- Standard eye length is 12" - making hook-up easy and fast
- Standard body width is 12" - making load balancing easier

Note:
Wide-Lift slings should only be used in basket hitch

Consult factory for special requirements.

Code	Color of Eyes	Vertical Basket Hitch Rated Capacity* (lbs.)
WL30	Purple	5,200
WL60	Green	10,600
WL90	Yellow	16,800
WL120	Tan	21,200

POLYESTER STAGE SLINGS - BLACK

These lightweight roundslings are ideal for easy and inconspicuous suspension of stage sound and lighting equipment. Black sleeve material helps sling blend into its surroundings. *Lift-All* Stage Slings maintain the basic *Tuflex* features, advantages and benefits except that the color coding of the slings is achieved by using a color coded identification *Tuff-Tag*. Double Wall sleeve material is standard.

STEEFLEX & POLYESTER STAGE SLING INFORMATION

	Part No.	Rated Capacity (lbs.)*			Minimum Length (ft.)	Approximate Measurements		
		Vertical	Choker	Basket		Weight (lbs. / ft.)	Body Dia. Relaxed (in.)	Width at Load (in.)
Polyester Stage Sling	BSEN30	2,600	2,100	5,200	1 1/2	.2	5/8	1 1/8
	BSEN60	5,300	4,200	10,600	1 1/2	.3	7/8	1 1/2
	BSEN90	8,400	6,700	16,800	3	.4	1 1/8	1 7/8
Steelflex	GACEN60	5,300	4,200	10,600	3**	.75	7/8	1 1/2

* **WARNING** Do not exceed rated capacities. Sling capacity decreases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°. Refer to Effect of Angle chart page 10.

** Maximum length for Steelflex is 9 ft.

STEELFLEX ROUNDSLINGS

THE STEEL SLING WITH THE FABRIC FEEL

Tufflex

GACEN60

400° F Temperature Rating
NO Wire Rope Backup Needed
Core Inspection Window Standard

Designed for Suspension Applications where metal slings are required.

With the trend in stage rigging to require metal slings for all overhead suspension, the problem has been how to accomplish this in the most efficient and cost effective way. **STEELFLEX ROUNDSLINGS** are the answer to that problem!

The load-bearing member of **STEELFLEX ROUNDSLINGS** is made from steel Galvanized Aircraft Cable wound in an endless configuration. This wire core is encased in a black double-wall, polyester jacket. A unique inspection window allows for easy inspection of the core for broken wires and corrosion. The result is a highly flexible, easy to use sling that complies with all of the current rigging codes.

The benefits are many:

Increased Safety

- Improved cut resistance
- Higher heat resistance
- Conforms to load to grip securely
- Window allows complete core inspection

Saves Time

- No backup rigging required
- Fewer components to inventory and carry
- Superior flexibility makes rigging easy
- Tan colored Tuff-Tag confirms steel core

Saves Money

- Gives you the slings you want to use (roundslings), without having to buy the slings you would be required to use (wire rope or chain)
- Lowers show to show freight costs

Inspection Window

TUFLEX HARDWARE / BRIDLE SLINGS

Features, Benefits and Advantages

Maintains all the basic *Tuflex* features plus ...

Promotes Safety

- Bridles provide better load control and balance_
- Hardware avoids cutting and abrasion of sling at bearing points

Saves Money

- Reduced load damage - protected between pick-up point and crane hook

Saves Time

- Lighter weight and easier to use and store than wire rope or chain slings
- Sling hooks quickly connect to loads having hoist rings or eye bolts

How to Order

Specify:

1. Number of legs -
S (Single-1), D(Double-2), T(Triple-3), Q(Quad-4)
2. Master Link - O (Oblong)
3. Bottom Attachments - S (Sling Hook), O (Oblong)
4. Tuflex Code
5. Length of Assembly -Feet (Bearing point to bearing point)

Example:
DOSEN90 X 10' is a double leg bridle, oblong master link, with sling hooks attached to each *Tuflex* EN90. Assembly length is 10 ft.

Part No.	Color	Rated Capacity (lbs.)*			Sling Hook **		Oblong Link (in.)				
		 Single @ 90° Vertical	 Double @ 60°	 Quad @ 60°		 Oblong Link Stock Dia. A (in.)	Size	E x R x T (in.)	Single	Double	Quad

** Hook sizes have been increased to conform to latest industry standards.

Hull Saver Boat Slings

LIFT-ALL HULL SAVER BOAT SLINGS

Polyester** web slings designed especially for use with travel lifts to lower and retrieve large boats.

Features, Advantages and Benefits

Promotes Safety

- *Tuff-Tag* provides required OSHA information for the life of the sling in a marine environment.
- *Lift-All* trained professionals are available for recommended seasonal inspection.
- Two ply *Hull Savers* are our standard for improved durability and UV resistance.

Saves Time

- Optional keel pad lead weights accelerate sinking to required lift depth.
- Quick disconnects are available to improve boat yard productivity.
- Extra eye offers versatility, reducing sling changing time and sling inventory.

Saves Money

- Low-stretch polyester webbing helps to avoid scuff damage to hulls.**
- HS polymer treatment is available to greatly extend sling life by resisting abrasion and UV degradation.
- Optional chine & keel pads protect boat and increase sling life.
- Edgeguard wear resistant webbing available - helps protect sling from abrasion.

Hull Savers

Web Plies	Hull Saver Code	Width (in.)	1 Rated Capacity* (lbs.)	Optional Pull Pin Shackles			
				Shackle Code	W (in.)	L (in.)	Weight Each (lbs.)
Two Ply	HS2804	4	23,000	PPS-4	4	3.75	3.2
	HS2806	6	32,600	PPS-6	6	4.75	6.8
	HS2808	8	38,400	PPS-6HD	6	4.75	9.8
	HS2810	10	44,800	PPS-6HD	6	4.75	9.8
	HS2812	12	53,800 ²	PPS-6HD ²	6	4.75	9.8

Pull Pin Shackles (Optional)

- Notes:
1. Capacity in lbs. is the rating of one sling in a vertical basket hitch.
 2. Derate sling to 48,000 when used with 6" HD Shackle (PPS-6HD)

** Note: Nylon webbing is available, but will stretch about 50% more than polyester and should not be used near acids. Polyester should not be used near caustics.

Custom Hull Savers

Lift-All will manufacture boat slings to fill your particular needs for width, length and capacity. Please call for quotations.

* Do not exceed rated capacities. Sling capacity decreases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°. Refer to Effect of Angle chart page 10.

LIFT-ALL HULL SAVER BOAT SLINGS

STANDARD BOAT SLING MEASUREMENTS

1. Sling Width _____ in.
2. Sling Length _____ ft.
3. Two Ply
4. Width of eyes _____ in.

SLING MATERIAL

Low stretch polyester webbing is standard because it helps to reduce chine marring. Nylon webbing is available, but will stretch about 50% more than polyester and should not be used near acids. HS Polymer Treatment extends sling life.

- POLYESTER - Natural or Treated (circle choice)
- NYLON - Natural or Treated (circle choice)

BOAT SLING ACCESSORIES

A. Extra Eyes - for shortening sling to lift smaller craft. See Measurement #5

- Extra Eye #1 - Position _____ ft. from point X / Y (circle choice)
- Extra Eye #2 - Position _____ ft. from point X / Y (circle choice)
- Extra Eye #3 - Position _____ ft. from point X / Y (circle choice)

B. Quick Disconnect With Flaps - Saves time needed to lower the lift for removing slings from the hooks. Available for 6" or wider only. Protective flap to cover pin is standard. See Measurement #6. Position _____ ft. from point X / Y.

C. Quick Disconnect Pin - This reusable pin is necessary for Quick Disconnect operation. Pin is galvanized for corrosion resistance. GAC wire with retaining clip holds pin in place.

D. Keel Pad - Helps protect the sling from abrasion and cutting. Sliding sleeve style allows sling to adjust to center point without scraping along keel. Pad uses the same webbing as the sling. Standard length is 48".

- Sliding Style - Length _____ ft.
- Sewn-on Style - Length _____ ft. Starting _____ ft. from X / Y

E. Keel Pad Weights - Lead weights allow for speedy submersion of sling.

F. Chine Pads - Helps to protect boat chines and rub rails and the sling from abrasion damage. Sliding pad can be positioned to accommodate any size and style of boat. May be sewn to sling per your specification. Pad uses the same webbing as the sling. Standard length is 48".

- Sliding - Quantity ____ Length _____ ft.
- Sewn-on - Quantity ____ Length _____ ft. Starting _____ ft. from X / Y

G. Edgeguard - Special wear resistant webbing applied to sling edges to help protect the sling from abrasion.

H. Pull Pin Shackles - Promotes sling life by protecting eyes of sling. Easier attachment of sling to lifting hook. Galvanized steel for corrosion resistance. Reusable.

- Quantity _____

LIFT-ALL HULL SAVER BOAT SLINGS

Safe Operating Practices

▲ WARNING

Read Definition on page 3

- Inspect slings prior to each use and do not use if damaged
- Never allow people to be aboard the boat while it is suspended by slings
- Never work under or near a boat suspended by slings
- Boats must be properly blocked and stabilized before removing slings
- *Hull Saver* Boat Slings are capacity rated for vertical basket lifts. Do not exceed rated capacities
- When lifting with extra eyes, direction of pull must always be away from center point of the original sling length

Environmental Considerations

- Nylon and polyester are seriously degraded at temperatures above 200°F.
- Prolonged exposure to ultraviolet light adversely affects nylon and polyester. Slings become bleached and stiff when exposed to sunlight or arc welding
- Many acids, alkalis and chemicals have an adverse effect on nylon and polyester. See Chemical Environment Data chart on page 14.

Inspection Criteria for *Hull Saver* Boat Slings

▲ WARNING

Read Definition on page 3

Remove from service if any of the following is visible:

- Sling is bleached or stiff due to sunlight exposure
- Capacity tag is missing or illegible
- Red core warning yarns are visible
- Sling shows signs of melting, charring or chemical damage
- End fittings are excessively pitted, corroded, distorted, cracked or broken
- Cuts on the face or edge of webbing
- Holes, tears, snags or crushed web
- Signs of excessive abrasive wear
- Broken or worn threads in the stitch patterns
- Any other visible damage which causes doubt as to its strength

Refer to photographs illustrating damaged webbing on pages 16-17.

Wire Rope & Slings

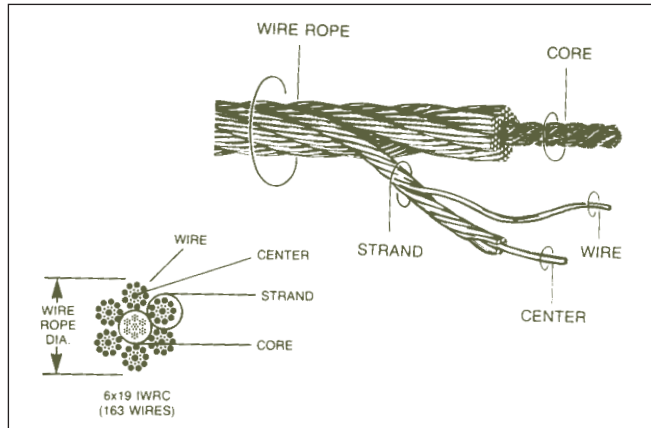

WIRE ROPE AND SLING BASICS

Two major and opposing characteristics of wire rope slings are flexibility and resistance to abrasion. To a great extent, these traits are a direct function of the number of wires. Fewer wires means larger diameter wires, better abrasion resistance, and reduced flexibility. More wires result in decreased wire diameter, reduced abrasion resistance, increased flexibility and kink resistance.

The scale below shows the relative position of the sling constructions shown in this catalog as they pertain to abrasion resistance and flexibility.

EIP = Extra Improved Plow (Steel)
FC = Fiber Core

Wire Rope Construction

Wire Rope

WIRE ROPE SLINGS

Features, Advantages and Benefits

Promotes Safety

- *Tuff-Tag* for capacity and serial numbered identification for traceability.

Saves Money

- Least expensive, per capacity, of all steel slings.
- Use of EIP, IWRC rope gives 15% greater capacity than IP, IWRC ropes.

Saves Time

- Countless combinations of sling terminations - hooks, chokers and thimbles are available to fit specific lift requirements.

D/d - Basket Hitch Effect

⚠ WARNING

Read Definition on page 3

Tests have shown that whenever a sling body is bent around a diameter, the strength of the sling is decreased. D/d ratio is the ratio of the diameter around which the sling is bent divided by the body diameter of the sling.

The capacities in this catalog are based on the minimum D/d ratios that appear below each of the capacity tables. For more severe bending conditions, contact *Lift-All* for revised capacities.

Environmental Considerations

- Wire core wire rope (IWRC) must not be used at temperatures above 400°F.
- Fiber core wire rope (FC) must not be used at temperatures above 180°F.
- Fiber core ropes should not be subjected to degreasing solvents.

Inspection Criteria for Wire Rope Slings

Remove slings from service when:

- End attachments, including hooks, are cracked, deformed or obviously worn;
- Hook throat opening is increased more than 15%;
- Hook is twisted out of plane by more than 10%.

⚠ CAUTION

Do not inspect a sling by passing bare hands over the wire rope.

INSPECTION CRITERIA FOR WIRE ROPE SLINGS (Cont'd)

All slings should be inspected for damage prior to each use to assure that their strength has not been compromised. The following photos illustrate some of the common damage that occurs to indicate that the sling must be taken out of service.

THE DAMAGE: Broken Wires

WHAT TO LOOK FOR: The individual wires that make up the strands in a wire rope can break for various reasons including fatigue and overload. Wire rope slings must be taken out of service when you find 10 or more broken wires in one rope lay or 5 or more broken wires in one strand of one rope lay.

TO PREVENT: Avoid pulling rope across edges or protrusions.

Wire Rope

THE DAMAGE: Wear

WHAT TO LOOK FOR: Flat areas on the individual wires. When wires have lost one third or more of their original diameter, the sling must be taken out of service.

TO PREVENT: Do not drag sling on the ground and do not drag loads over slings. Pad high wear areas.

THE DAMAGE: Corrosion / Heat Damage

WHAT TO LOOK FOR: Absence of lubrication and discoloration of rope.

TO PREVENT: Hang slings for storage away from moisture. Do not use wire core slings above 400° F or fiber core slings above 180° F.

THE DAMAGE: Kinking, Bird Caging

WHAT TO LOOK FOR: Bent strands of wire or strands standing out from their regular position in the body of the sling.

TO PREVENT: Protect rope from sharp edges of load by pads or other means. Do not shock load slings.

THE DAMAGE: Crushing

WHAT TO LOOK FOR: A section of rope that is flattened, where the cross section is no longer round.

TO PREVENT: Never allow loads to be set on top of slings.

HOW TO ORDER WIRE ROPE SLINGS

Prior to sling selection and use, review and understand the "Help" section pages 3 through 12.

We have developed the following wire rope sling code system to help you in ordering these products.

Wire Rope

Tolerances and Minimum Lengths

Refer to tables for tolerances and minimum lengths.

Wire Rope Class

Standard rope classes are shown for each type and size of sling in the charts. Specific rope constructions are available upon request.

PERMALOC WIRE ROPE SLINGS

Lift-All Permaloc Slings are made using the flemish splice technique to form the eyes. Unlike the simple return loop method that places 100% of its strength on the swaged sleeve, *Permaloc* slings have reserve strength should the sleeve become damaged in use.

Features, Advantages and Benefits

Maintains all the basic *Lift-All* wire rope sling features plus ...

Promotes Safety

- Reserve strength - integrity of eyes not solely dependent upon steel sleeves
- IWRC resists crushing better than FC ropes

Saves Money

- When specified, thimble eyes protect wire rope from wear for increased life
- Good abrasion resistance for longer life

Mechanically swaged, flemish eye splice wire rope slings

	2 1/4	44	35	89	10' 0"	18 x 36	7 x 14	45	8 1/2 x 26	8 x 15 1/2	-
	2 1/2	54	42	109	11' 0"	20 x 40	-	-	8 1/2 x 29 1/2	-	-

Note: Larger diameter slings available. Basket ratings are based on a minimum D/d of 25. See page 60.

1. 1 Ton = 2,000 lbs.

2. Minimum sling length when using standard eyes.

Note: **Length Tolerances** - Single Part Wire Rope Slings - Standard length tolerance is plus or minus two rope diameters, or plus or minus 0.5% of the sling length, whichever is greater.

** See page 77 for reduced choker capacity when using these hook sizes.

WARNING

Do not exceed rated capacities. Sling capacity decreases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°. Refer to Effect of Angle chart page 10.

PERMALOC BRIDLE SLINGS

Features, Advantages and Benefits

Maintains all the basic *Lift-All* wire rope sling features plus ...

Promotes Safety

- Bridles provide better load control and balance
- Independent wire rope core resists crushing

Saves Money

- Alloy steel hooks and links assure long life
- Thimble eyes protect wire rope from wear for increased life
- Reduces load damage by using fixed points on load

Saves Time

- Easier rigging provided when hooking into fixed lifting points

Note: **Length Tolerances** - Single Part Wire Rope Slings - Standard length tolerance is plus or minus two rope diameters, or plus or minus 0.5% of

Other fittings and latches are available upon request.
 1. 1 Ton = 2,000 lbs.
 2. Minimum length based on thimble eye and eye hook.

Do not exceed rated capacities. Sling capacity decreases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°. Refer to Effect of Angle chart page 10.

GROMMETS AND ENDLESS SLINGS

Features, Advantages and Benefits

Maintains all the basic *Lift-All* wire rope sling features plus ...

Promotes Safety

- Load stability and balance can be achieved by spreading sling legs in a basket or choker hitch

Saves Money

- Wear points can be shifted to extend sling life
- The most versatile style of sling - fewer slings to inventory

Saves Time

- Ideal for turning loads
- More flexible than eye slings of comparable strength

Grommets - Strand Laid, Hand Tucked

Made from one strand of EIP, 19 or 37 wire, hand laid and spliced to form a seven strand rope with no noticeable splice area. No sleeves to snag or get in the way.

Rope Dia. (in.)	Rated Capacity (tons)*			Minimum Sling Length	Splice Length (in.)
	Vertical	Choker	Vertical Basket		
3/8	2.1	1.5	4.2	3' 0"	2 7/16
7/16	2.8	2.0	5.7	3' 6"	2 7/8
1/2	3.7	2.6	7.3	4' 0"	3 1/4
9/16	4.6	3.2	9.3	4' 6"	3 11/16
5/8	5.7	4.0	11	5' 0"	4 1/16
3/4	8.2	5.7	16	6' 0"	4 7/8
7/8	11	7.7	22	7' 0"	5 11/16
1	14	10	29	8' 0"	6 1/2

Vertical and Basket ratings are based on a minimum D/d of 5. See page 60.

Endless - Mechanical Splice

Made from one 6 x 19 or 6 x 37 EIP, IWRC wire rope, mechanically joined with steel sleeves. Achieves higher capacities at a lower cost.

Rope Dia. (in.)	Rated Capacity (tons)*			Minimum Sling Length	Splice Length A (in.)
	Vertical	Choker	Vertical Basket		
1/4	1.0	.71	2.0	3' 0"	8
5/16	1.6	1.1	3.1	3' 0"	8
3/8	2.3	1.6	4.5	3' 0"	8
7/16	3.1	2.1	6.1	6' 0"	10
1/2	3.9	2.8	7.9	6' 0"	10
9/16	5.0	3.5	10	6' 0"	10
5/8	6.1	4.3	12	6' 0"	10
3/4	8.8	6.2	18	8' 0"	16
7/8	12	8.3	24	8' 0"	18
1	15	11	31	8' 0"	20

Note: 3 sleeves used on 3/4" and larger.

Vertical and Basket ratings are based on a minimum D/d of 5. See page 61.

⚠ WARNING Read Definition on page 3.

Do not lift with hook in splice area - sling damage may occur.

⚠ WARNING
Do not exceed rated capacities. Sling capacity decreases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°. Refer to Effect of Angle chart page 10.

E-Z FLEX CABLE LAID SLINGS

E-Z Flex slings are made from a machine laid rope that consists of seven individual, galvanized ropes.

Features, Advantages and Benefits

Maintains all the basic *Lift-All* wire rope sling features plus ...

Saves Money

- Superior flexibility - resists damage from kinking
- Galvanized coating for corrosion resistance and longer life

Wire Rope

7 x 7 x 7

7 x 7 x 19

** Minimum sling length when using standard eyes. Basket ratings are based on a minimum D/d of 10. See page 60. Other fittings are available upon request.

⚠ WARNING Do not exceed rated capacities. Sling capacity decreases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°. Refer to Effect of Angle chart page 10.

E-Z FLEX TWO LEG BRIDLE SLINGS

Features, Advantages and Benefits

Maintains all the basic *Lift-All* wire rope sling features plus ...

Promotes Safety

- Bridles provide better load control and balance

Saves Money

- Excellent flexibility - resists damage from kinking
- Galvanized coating for corrosion resistant longer life
- Alloy steel fittings assure long life

Saves Time

- Easier rigging provided when hooking into fixed lifting points
- Sliding choker hook speeds rigging of bundled materials

⚠ WARNING

Read Definition on page 3.

Do not lift with hook in splice area - sling damage may occur.

** Minimum length based on thimble eye and eye hook.

⚠ WARNING

Do not exceed rated capacities. Sling capacity decreases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°.

E-Z FLEX ENDLESS SLINGS

Features, Advantages and Benefits

Maintains all the basic *Lift-All* wire rope sling features plus ...

Promotes Safety

- Load stability and balance achieved by spreading sling legs in basket and choker hitches

Saves Money

- Wear points can be shifted to extend sling life
- Smaller rope diameter per capacity increases flexibility

Saves Time

- Ideal for turning loads
- More flexible than eye slings of comparable strength

WARNING

Read Definition on page 3

Do not lift with hook in splice area - sling damage may occur.

Note: 3 sleeves used on 3/4" and larger.

E-Z FLEX Endless Slings

	Rope Dia. (in.)	Rated Capacity (tons)*			Min. Sling Length	Splice Length A (in.)

Basket ratings are based on a minimum D/d of 15. See page 60.

* **WARNING** Do not exceed rated capacities. Sling capacity decreases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°. Refer to Effect of Angle chart page 10.

MULTI - PART CABLED SLINGS

Three Part Cabled

Constructed by hand cabling one rope to form a three part body with two part eyes.

3 Part Cabled

Features, Advantages and Benefits

Maintains all the basic *Lift-All* wire rope sling features plus ...

Saves Money

- Good abrasion resistance increases useful life of sling
- Resists damage from kinking

Saves Time

- Flexible, easy to handle by rigger
- Small sleeve over component rope won't get in the way

	Component Rope (in.)	Sling Body Dia. (in.)	Rated Capacity (tons)*			Min. Sling Length	Standard Eye (in.) W x L	Crescent Thimble Eye Size (in.) W x L	Slip Thru Thimble Eye Size (in.) W x L

Basket ratings are based on a minimum D/d of 10 (using sling body dia.). See page 60.

Seven Part Cabled

Constructed by hand cabling one rope to form a seven part body with four part eyes.

7 Part Cabled

Features, Advantages and Benefits

Maintains all the basic *Lift-All* wire rope sling features plus

Saves Money

- Resists damage from kinking

Saves Time

- Superior flexibility makes sling easy to rig and use
- Small sleeve over component rope won't get in the way

	Component Rope Dia. (in.)	Sling Body Dia. (in.)	Rated Capacity (tons)*			Min. Sling Length	Standard Eye (in.) W x L	Crescent Thimble Eye Size (in.) W x L	Slip Thru Thimble Eye Size (in.) W x L

Basket ratings are based on a minimum D/d of 10 (using sling body dia.). See page 60.

* **WARNING** Do not exceed rated capacities. Sling capacity decreases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°. Refer to Effect of Angle chart page 10.

MULTI - PART BRAIDED SLINGS

Six Part Flat Braid

Constructed by braiding one rope to form a six part flat body with web seized eyes.

6 Part Flat Braid

Features, Advantages And Benefits

Maintains all the basic *Lift-All* wire rope sling features plus ...

Promotes Safety

- Wide bearing surface provides better load control and balance
- Resists rotation, improving load control

Saves Money

- Resists damage from kinking
- Reduces load damage by gripping load better

Saves Time

- Flexible - easy to rig

	Component Rope Dia. (in.)	Sling Body Dia. (in.)	Rated Capacity (tons)*			Min. Sling Length	Standard Eye (in.) W x L	Crescent Thimble Eye Size (in.) W x L	Slip Thru Thimble Eye Size (in.) W x L

Basket ratings are based on a minimum D/d of 25 (using component rope). See page 60.

Eight Part Round Braid

Constructed by braiding one rope to form an eight part round body with four part web seized eyes.

8 Part Round Braid

Features, Advantages And Benefits

Maintains all the basic *Lift-All* wire rope sling features plus ...

Promotes Safety

- Resists rotation, for improved load control

Saves Money

- The most kink resistant sling available
- Greater flexibility for reduced load damage

Saves Time

- The most flexible sling available - easy to rig

	Component Rope Dia. (in.)	Sling Body Dia. (in.)	Rated Capacity (tons)*			Min. Sling Length	Standard Eye (in.) W x L	Crescent Thimble Eye Size (in.) W x L	Slip Thru Thimble Eye Size (in.) W x L

* Nominal Breaking Strength based on 6 x 19 or 6 x 37 IWRC, EIP wire rope, with assembly used as a straight tension member.

SWAGED SOCKET ASSEMBLIES

Features, Advantages and Benefits

Promotes Safety

- Achieves 100% of nominal rope breaking strength
- All assemblies are proof tested before shipment to customer

Saves Money

- Custom engineered assemblies are available for specific rigging needs

Open Swaged Sockets

Open and Closed Swaged Sockets

Rope Diameter (in.)	Minimum Pendant Length	Vertical Capacity (tons) *

WINCH LINES, HOIST LINES AND BUTTONS

Winch and Hoist Line Cables

Lift-All winch and hoist lines are made using 6 x 19 Wire Core ropes for better resistance to abrasion and crushing. Available with carbon hooks for large throat openings or alloy hooks for longer life.

Features, Advantages and Benefits

Promotes Safety

- Permaloc flemish eye splice for high strength efficiency
- Quality factory assembly avoids faulty termination

Saves Money

- Economical standard assemblies
- Heavy duty thimble in eye extends useful life

Saves Time

- No assembly time - ready to install
- Stainless steel latch keeps hook in proper place

Winch and Hoist Line Cables

Swaged Steel Buttons

Swaged steel buttons are designed for use as end stops on drum winding equipment such as hoists and winches.

After Swage Dimensions

Rope Diameter (approx. in.)	A	B

1	1.85	51.7	
1 1/8	2.34	65.0	
1 1/4	2.89	79.9	
1 3/8	3.50	96.0	
1 1/2	4.16	114	
1 5/8	4.88	132	
1 3/4	5.67	153	
1 7/8	6.50	174	
2	7.39	198	

Note: Specialty ropes are available upon request.

Rotation Resistant Wire Rope

	Rope Dia. (in.)	Approx. Weight per Foot (lbs.)	Nominal Breaking Strength (tons)
	3/8	.25	6.15
	7/16	.35	8.33
	1/2	.45	10.8
	9/16	.58	13.6
	5/8	.71	16.8
	3/4	1.02	24.0
	7/8	1.39	32.5
	1	1.82	42.2
	1 1/8	2.3	53.1

The Nominal Breaking Strength of a wire rope should be considered the straight line pull with both rope ends fixed to prevent rotation, which will ACTUALLY BREAK a new, UNUSED, rope. The Nominal Breaking Strength of a rope should NEVER BE USED AS ITS WORKING LOAD.

To determine the working load of a wire rope, the MINIMUM or NOMINAL Breaking Strength MUST BE REDUCED by a DESIGN FACTOR. The design Factor will vary depending upon the type of machine and installation, and the work permitted. YOU must determine the applicable Design Factor for your use.

For example, a Design Factor of "5" means that the Minimum or Nominal Breaking Strength of the wire rope must be DIVIDED BY FIVE to determine the maximum load that can be applied to the rope system.

Design Factors have been established by OSHA, by ANSI, by ASME and similar government and industrial organizations.

No wire rope should ever be installed or used without full knowledge and consideration of the Design Factor for the application.

The above is based on the 'Wire Rope Safety Bulletin' published by the "WIRE ROPE TECHNICAL BOARD".

SLING ATTACHMENTS, HOOKS, ETC.

Alloy Steel Eye Hooks

- Light weight hooks for heavy duty lifting

CABLE & COMPONENTS

Wire Rope Clips

The following instructions, supplied by the Wire Rope Technical Board, will result in an approximate 80% efficiency rating when the clips are applied as instructed, on GAC, SSAC, RRL or RLL, 6 x 19 class or 6 x 37 class, fiber core or IWRC, non-Seale type construction wire rope. If applied to vinyl coated ropes, vinyl must first be stripped from clip connection area.

How to Apply Clips

1. Turn back the specified amount of rope from the thimble. Apply the first clip one clip width from the dead end of the wire rope (U-bolt over dead end - live end rests in clip saddle). Tighten nuts evenly to recommended torque.
2. Apply the next clip as near to the loop as possible. Turn on nuts firmly but do not tighten.
3. Space additional clips, if required, equally between the first two. Tighten on nuts - take up rope slack - tighten all nuts evenly on all clips to recommended torque.
4. NOTICE! Apply the initial load and retighten nuts to the recommended torque. Rope will stretch and be reduced in diameter when loads are applied. Inspect periodically and retighten to recommended torque.

Right Way - For Maximum Rope Strength

Wrong Way - Clips Staggered

Wrong Way - Clips Reversed

Acknowledgement

Lift-All wire rope slings and rated capacities comply with all OSHA, ASME B30.9, and Wire Rope Technical Board publications. Portions of this section of the catalog were taken from the Wire Rope Sling User's Manual with the permission of the Wire Rope Technical Board and the American Iron and Steel Institute.

Wire Rope

LiftAlloy Chain Slings

LiftAlloy CHAIN SLING BASICS

Lift-All chain slings meet or exceed all OSHA, ASME B30.9 and NACM standards and regulations.

LiftAlloy chain slings, available in Grades 80 and 100, are recommended for rugged industrial applications in harsh environments where flexibility, abrasion resistance and long life are required. OSHA required annual inspections can be performed by Lift-All trained personnel.

Use of Chain Under Heat Conditions

When the chain itself is heated to temperatures shown below, the Working Load Limit (Rated Capacity) should be reduced as indicated.

Features, Advantages and Benefits

Promotes Safety

- Permanent steel capacity tag is serialized for identification
- Welded slings offer the security of tamper proof assemblies

Saves Money

- Alloy Steel construction assures long life
- Can be repaired, proof tested and recertified by Lift-All

Saves Time

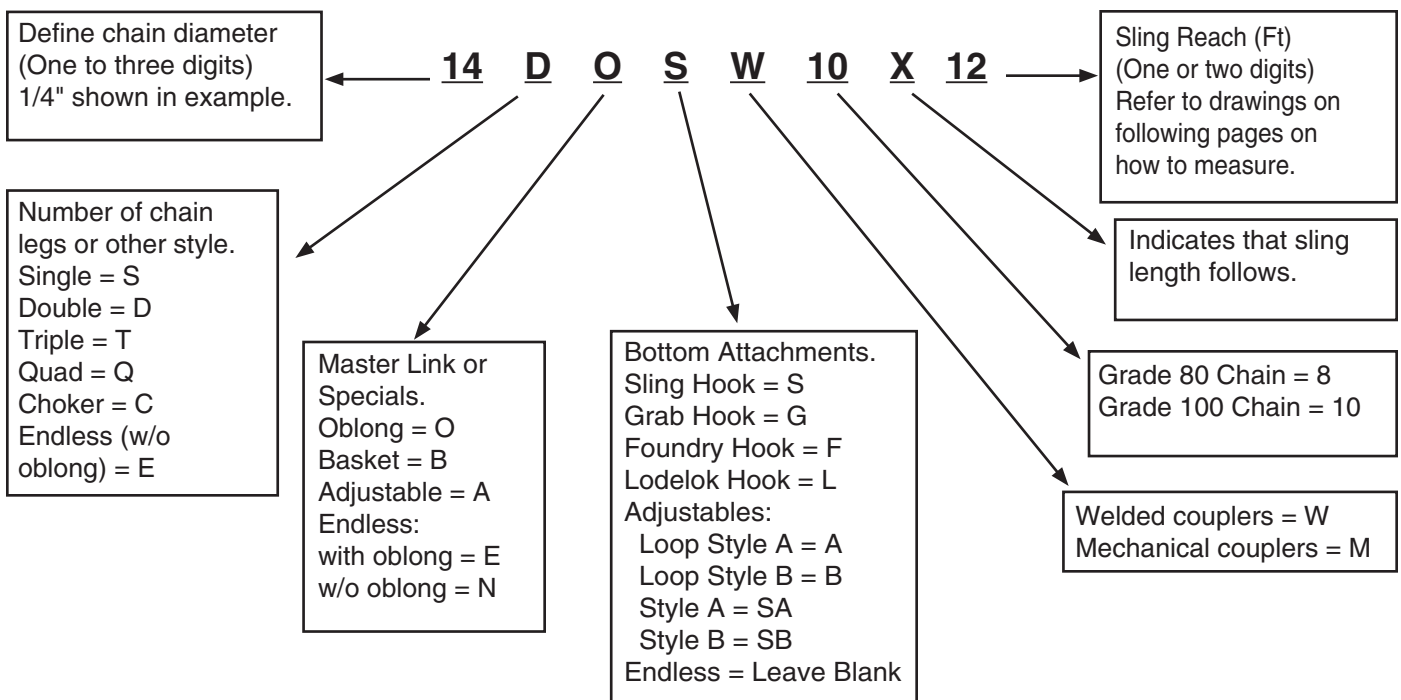

- Easy to inspect for damage
- Stores easily

Temperature of Chain (°F)	Reduction of Working Load Limit While at Temperature		Permanent Reduction of Working Load Limit After Exposure to Temperature	
	Grade 80	Grade 100	Grade 80	Grade 100
Below -40	Do Not Use	Do Not Use	None	None
Below -20	None	Do Not Use	None	None
400	10%	15%	None	None
500	15%	25%	None	5%
600	20%	30%	5%	15%

Consult Lift-All about chain to be used in pickling operations

HOW TO ORDER CHAIN SLINGS

LiftAlloy CHAIN SLING BASICS

LiftAlloy Grade 80

- Proven reliability
- Available in welded or mechanically assembled slings
- Widest range of sizes and styles
- Greater temperature tolerance

LiftAlloy Grade 100

- Higher capacity per chain size can be used as an increased safety factor
- Higher capacity may allow use of smaller diameter chain for your lifts, reducing sling weight and cost
- Extreme abrasion resistance - more durable
- Shot blasted and oil finished chain for distinct, uniform appearance and corrosion resistance
- Power coated silver gray attachments for distinctive appearance, identification and corrosion resistance
- Meets or exceeds all OSHA, ASTM and NACM standards

Chain Wear Allowance

Determine wear by measuring cross section at link ends. If worn to less than the minimum thickness allowable, chain should be removed from service.

Chain Size (in.)	Minimum Allowable Thickness - A (in.)
7/32 (.218)	.189
9/32 (.281)	.239
3/8 (.375)	.342
1/2 (.500)	.443
5/8 (.625)	.546
3/4 (.750)	.687
7/8 (.875)	.750
1 (1.00)	.887
1 1/4 (1.250)	1.091

Minimum thickness based on OSHA recommendations.

* **WARNING** Do not exceed rated capacities. Sling capacity decreases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°. Refer to chain chart this page and Effect of Angle chart page 10.

** A quad branch chain sling, especially when used on a load of rigid structure, is usually not sustaining the load evenly distributed on each of its four branches. The maximum working load limits are therefore set at the same values as for triple branch chain slings of equal quality and size and used with branches at same angle of inclination.

LiftAlloy Chain

INSPECTION CRITERIA FOR CHAIN

All slings should be inspected for damage prior to each use to assure that their strength has not been compromised. The following photos illustrate some of the common damage that occurs to indicate that the sling must be taken out of service.

THE DAMAGE: Stretched Chain Links - Indicates the sling has been extremely overloaded or subjected to shock loading.

WHAT TO LOOK FOR: Lengthening of the links and narrowing of the link width. Links that do not hinge freely with adjacent links are stretched and must be taken out of service, however, stretch **can** occur without this indicator.

TO PREVENT: Avoid overloading and shock loading.

THE DAMAGE: Bent Links

WHAT TO LOOK FOR: Bending usually occurs in only one or two adjacent links. Links will have an irregular shape when compared to other links.

TO PREVENT: Bent links are usually the result of the chain going around the sharp edge of a load during a lift. Load edges must be padded to protect both chain and load.

THE DAMAGE: Weld Spatter

WHAT TO LOOK FOR: Metallic bumps on any link of chain.

TO PREVENT: The heat from weld spatter can adversely affect the strength of a chain link. Slings must be shielded from welding operations.

THE DAMAGE: Gouged Links

WHAT TO LOOK FOR: Indentations on an otherwise smooth link surface.

TO PREVENT: Gouging of links is usually caused by heavy loads being dragged over or dropped onto the chain. Protect sling from these situations.

INSPECTION CRITERIA FOR CHAIN

THE DAMAGE: **Heat**

WHAT TO LOOK FOR: Discolored areas of chain

TO PREVENT: High temperatures begin to affect alloy chain strength at 400°F. When using chain slings at elevated temperatures, refer to the Lift-All temperature chart for chain slings for working load reductions.

THE DAMAGE: **Worn Links**

WHAT TO LOOK FOR: Excessive wear and a reduction of the material diameter, especially at the bearing points. Refer to Lift-All Wear Allowance Table for minimum allowable link thickness.

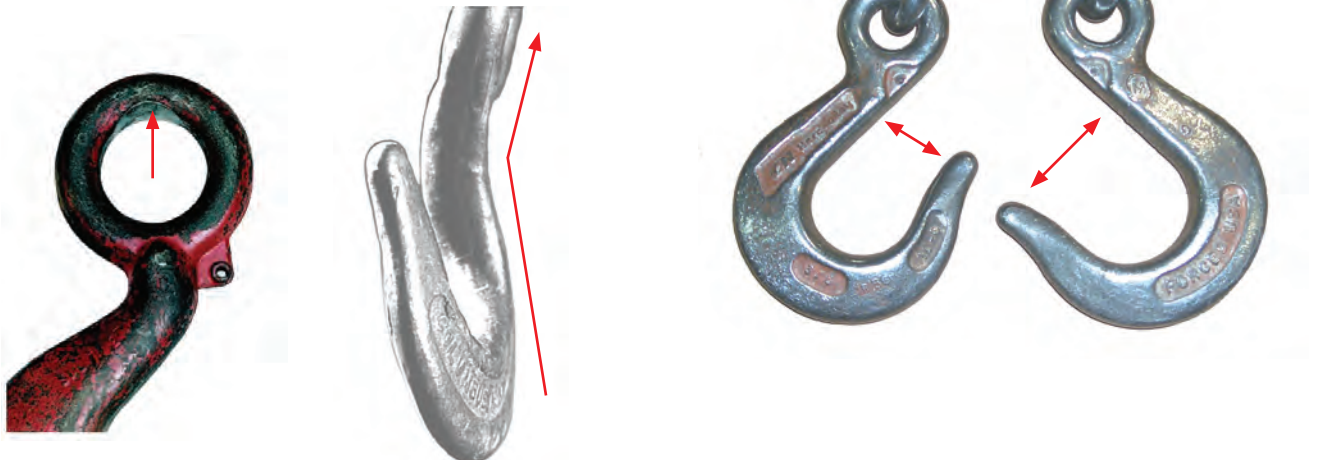

TO PREVENT: Wear is a natural result of sling use. Keeping load weights within the ratings of the slings being used will give the maximum sling wear life.

LiftAlloy
Chain

THE DAMAGE: **Bent/Worn/Cracked Hardware**

WHAT TO LOOK FOR: Wear of hooks and other fittings usually occurs at the bearing points. Hooks bent more than 10° from the plane of the unbent hook. Hooks opened more than 15% of the normal throat opening.

TO PREVENT: Never point load hooks or lift with hardware on a load edge.

LiftAlloy SINGLE CHAIN SLINGS

Chain Size (in.)	'Rated Capacity* Vertical (lbs.)		Approx. Weight 5 foot Reach Type SOS (lbs.)

5/8	18,100	22,600	31,300	39,100
3/4	28,300	35,300	49,000	61,100
7/8	34,200	-	59,200	-
1	47,700	-	82,600	-
1 1/4	72,300	-	125,200	-

Note: 1. Also referred to as "Working Load Limit".

WARNING

Do not exceed rated capacities. Sling capacity decreases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°. Refer to chain chart page 85 and Effect of Angle chart page 10.

ADJUST-A-LINK GRADE 100 CHAIN SLINGS

The most easily adjustable and versatile chain sling is now stronger, too!
Ideal for machine shop and maintenance departments varied requirements.

**New, Improved
Master Control
Plate ***

Features, Advantages and Benefits

Promotes Safety

- Chain cannot be removed from the master control plate, assuring the capacity rating will not be compromised
- Alloy steel master control link for strength and reliability
- Each assembly serialized for traceability
- Complies with OSHA - proof tested and certified

Saves Money

- Grade 100 chain provides approximately 25% higher capacities than our previous *Adjust-A-Links* - replaces larger, more expensive slings
- New angled plate design reduces bending torque on chain and plate - reduces wear and extends sling life
- Wider top bearing surface reduces wear to both plate and crane hook
- Versatile - one sling does many jobs
- Using two *Adjust-A-Links* on the same crane hook eliminates the need for expensive triples and quads
- Heat treated alloy steel construction for long sling life
- Yellow powder coating on master plate and hooks prevents rust - extends sling life

Saves Time

- More compact plate design fits larger hooks for easier rigging
- Less bulky than typical double adjustable chain slings
- High visibility yellow fittings make assembly easy to spot
- Easily adjustable to accommodate a wide range of applications
- No time wasted searching for just the right sling

Never exceed rated capacities.
Chain must be seated at the base of adjusting slot of the Master Control Link.

LiftAlloy
Chain

Note: To order latches on hooks, add an "L" to end of Part No.

⚠ WARNING

Do not exceed rated capacities. Sling capacity decreases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°. Refer to chain chart page 85 and Effect of Angle chart page 10.

Roughneck Mesh Slings

Roughneck WIRE MESH SLINGS

Specialty Slings with Particular Properties and Uses

Widely used in metalworking shops and steel warehouses where loads are abrasive, hot or tend to cut web

Features, Advantages and Benefits

Promotes Safety

- Steel construction resists abrasion and cutting
- Each sling permanently stamped with capacity and serial number
- Good flexibility - grips load's contours
- Each sling proof tested and certified

Saves Money

- Grips load firmly without stretching - reduces load damage
- Resists abrasion and cutting for greater sling life
- Flexibility and low stretch reduce load damage
- Wide bearing area distributes load to help avoid load damage
- Repairable - thus very cost effective
- Alloy steel end fittings - plated for long life
- Wire mesh is galvanized - resists corrosion

Saves Time

- Width of mesh helps control and balance load
- End fittings fit most large crane hooks

Roughneck Wire Mesh Sling Construction

Standard Construction: Alloy steel end fittings, zinc plated. Mesh is galvanized high tensile steel. 10 gage is standard, 12 gage is available upon request

Optional Construction: Stainless steel mesh is available for corrosive and hotter environments.

Inspection Criteria for Roughneck Wire Mesh Slings

Remove the sling from service if any of the following is visible: (See Page 102)

- A broken weld or brazed joint along the sling edge
- A broken wire in any part of the mesh
- Reduction in wire diameter of 25% due to abrasion or 15% due to corrosion
- Lack of flexibility due to distortion of the mesh
- Visible distortion or wear of either end fitting
- Cracked end fitting

Environmental Considerations

- Wire mesh slings shall not be used at temperatures above 550°F.
- Store in a clean, dry area to avoid corrosive action

⚠ WARNING

Do not edge load. Full width of mesh must contact load.

How To Order

Specify:

1. Mesh Gage (10 or 12)
2. Mesh Width - Inches
3. Length - Feet (Bearing point to bearing point)
4. Sling Type (1 or 2)

Type 1

Type 2

Wire Mesh Width (in.)	Rated Capacity (lbs.) *		
	Vertical	Choker	Basket
10 Gage - Heavy Duty			
2	2,300	2,300	4,600
3	3,500	3,500	7,000
4	4,800	4,800	9,600
6	7,200	7,200	14,400
8	9,600	9,600	19,200
10	12,000	12,000	24,000
12	14,400	14,400	28,800
14	16,800	16,800	33,600
16	19,200	19,200	38,400
18	21,600	21,600	43,200
20	24,000	24,000	48,000
12 Gage - Medium Duty			
2	1,600	1,600	3,200
3	2,400	2,400	4,800
4	3,200	3,200	6,400
6	4,800	4,800	9,600
8	6,400	6,400	12,800
10	8,000	8,000	16,000
12	9,600	9,600	19,200

NOTE: The choker fitting must not be positioned against a load edge or directly on the triangle fitting.

Do not exceed rated capacities. Sling capacity decreases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°. Refer to Effect of Angle chart page 10.

Roughneck WIRE MESH SLINGS

Select The Proper Mesh

10 Gage - Heavy Duty

12 Gage - Medium Duty

This single 4" wide mesh sling in a choker hitch at load center of gravity provides adequate stability for many structural steel loads.

Prompt Shipment or Repair Service by Experts

Wire mesh slings with normal usage will eventually need repair and parts replaced. This can be done for relatively small cost. *Lift-All* wire mesh slings that are repaired are guaranteed to meet or exceed original specifications. Five *Lift-All* factories are strategically located in the U. S. to insure prompt service. We repair all types and brands of mesh slings.

Roughneck CHAIN MESH SLINGS

Specialty Slings for rugged applications.

Widely used in metalworking shops, and stevedoring where abrasive conditions or hot environments damage and destroy synthetic slings.

Features, Advantages and Benefits

Promotes Safety

- Each sling permanently stamped with capacity and serial number for traceability
- Steel construction resists abrasion and cutting
- Each sling proof tested and certified

Saves Time

- Width of mesh helps to balance and control loads
- End fittings fit most large crane hooks

Saves Money

- Alloy steel end fittings and Grade 80 Alloy chain resists abrasion and cutting for greater sling life
- Repairable - thus cost effective
- Low stretch and good flexibility reduces load damage
- Wide bearing area distributes load to help avoid load damage

Inspection Criteria for Roughneck Chain Mesh Slings

Remove sling from service if any of the following are visible:

- Wear, nicks, cracks, breaks, gouges, stretch, bends or weld spatter on chain or attachments
- Discoloration from excessive temperature
- Chain links and attachments won't hinge freely with adjacent links
- Visible distortion of either end fitting out of its plane
- Distortion or any collapse of eye width on either end fitting
- 15% reduction of original cross-sectional area of metal at any point of either end fitting
- Cracked end fitting

How to Order

Specify:

1. Chain size - ($\frac{7}{32}$ " , $\frac{9}{32}$ " , $\frac{3}{8}$ " or $\frac{1}{2}$ ")
2. Type 1 (Triangle & Choker) or Type 2 (Triangle & Triangle)
3. Number of parts of chain
4. Length - Feet (Bearing point to bearing point)

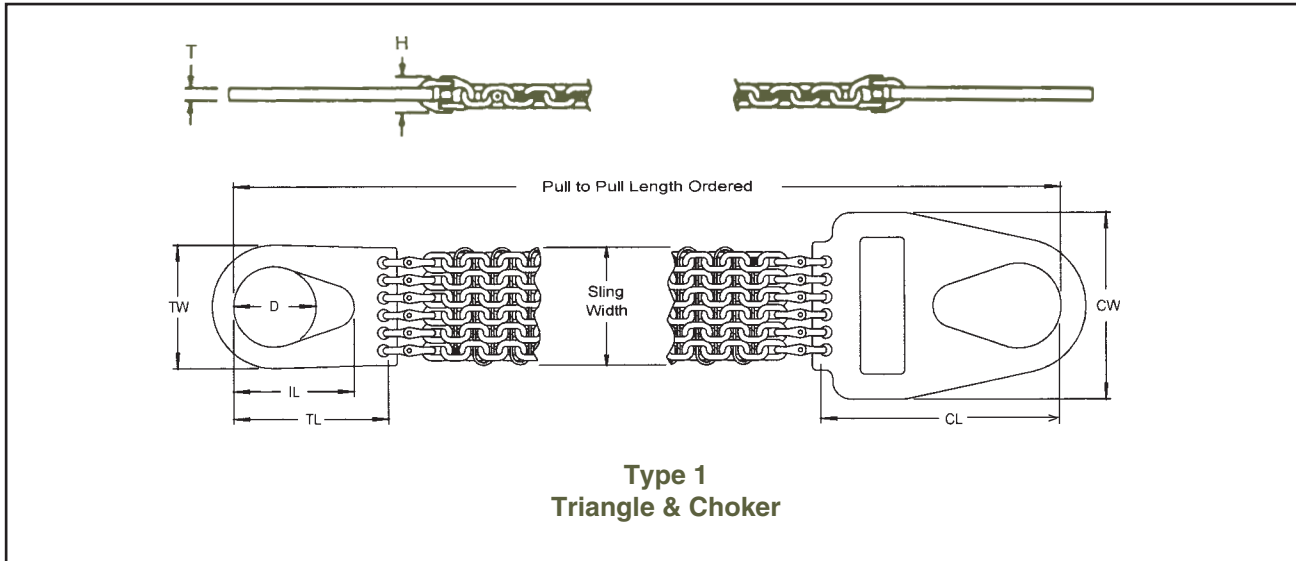

Chain Size (in.)	Parts of Chain	Sling Width (in.)	Rated Capacity (lbs.)*		
			Vertical	Choker	Basket
7/32	3	1 1/2	5,000	5,000	10,000
	4	2	6,700	6,700	13,400
	5	2 1/2	8,400	8,400	16,800
	6	3	10,000	10,000	20,000
9/32	3	2 1/8	8,400	8,400	16,800
	4	2 3/4	11,000	11,000	22,000
	5	3 3/8	14,000	14,000	28,000
	6	4	16,800	16,800	33,600
3/8	3	3 1/4	17,000	N/A	34,000
	4	4 3/8	22,700	N/A	45,400
	5	5 3/8	28,400	N/A	56,800
	6	6 1/2	34,000	N/A	68,000
1/2	2	3	19,200	N/A	38,400
	3	4 1/2	28,800	N/A	57,600
	4	6	38,400	N/A	76,800

* **WARNING** Do not exceed rated capacities. Sling capacity decreases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°.

Environmental Considerations

- Rated capacities of chain mesh are reduced at temperatures above 400°F. (See table page 84)
- Store in clean, dry area to avoid corrosive action

Roughneck CHAIN MESH SLINGS

Chain Size (in.)	Parts of Chain	Sling Width (in.)	Terminal Dimensions (in.)								5 ft. Type 2 Weight (lbs.)	Weight per ft. (lbs.)

	4	6	5 1/4	7 7/8	9 3/4	7 3/4			1	3 1/8	62	10

Note: Length tolerance \pm 2 chain links so plane is maintained.

INSPECTION CRITERIA FOR WIRE MESH SLINGS

All slings should be inspected for damage prior to each use to assure that their strength has not been compromised. The following photos illustrate some of the common damage that occurs to indicate that the sling must be taken out of service.

THE DAMAGE: **Overloading / Uneven Loading**

WHAT TO LOOK FOR: Mesh does not lie flat, appears distorted and/or will not bend easily.

TO PREVENT: Do not load in excess of rated capacity. Load edges must be straight / flat and in contact with full width of mesh at bearing points.

THE DAMAGE: **Wear**

WHAT TO LOOK FOR: Flat areas on the individual wires. When wires have lost 25% or more of their original diameter, the sling must be taken out of service.

TO PREVENT: Do not drag sling on the ground and do not drag loads over slings. Pad high wear areas.

THE DAMAGE: **Corrosion / Heat Damage**

WHAT TO LOOK FOR: Areas of discoloration. Remove slings with wire diameter reduction of 15% or more. Slings exposed to temperatures of 550° F or more must be removed from service.

TO PREVENT: Hang slings for storage away from moisture. Do not use mesh slings above 550° F. Consider using stainless steel mesh.

THE DAMAGE: **Broken Weld or Brazed Joint**

WHAT TO LOOK FOR: A cracked or separation of the wire at the edge or in the body of the mesh.

TO PREVENT: Do not side load mesh. Tension on sling must be distributed evenly across the entire width of the mesh.

THE DAMAGE: **Distortion or Wear of End Fittings**

WHAT TO LOOK FOR: Fittings that do not lie flat or have obvious areas of wear.

TO PREVENT: Never lift with fitting against a load edge or set load directly onto sling. Reduce wear by keeping loads within the rated capacity of the sling.

LOAD HUGGER® CARGO CONTROL

Load Hugger BASICS

Lift-All Load Hugger cargo control and load securement products are of the highest quality. They offer the van and flatbed operator a wide variety of options to meet Department of Transportation and CVSA requirements.*

Features, Advantages and Benefits

Promotes Safety

- Flexible, conforms to and controls the load
- Ratchet assembly allows easy adjustment
- All hooks and chain assemblies equal or exceed strength of webbing
- Meet all DOT (Department of Transportation) and CVSA (Commercial Vehicle Safety Alliance) regulations.

Saves Money

- Soft and wide - does not damage costly cargo
- Large selection - choose the capacity that's right for the load carried

Saves Time

- Light weight, easy to handle
- Large selection of end fastenings, winches and ratchets make choosing and using the correct assembly easy

Inspection Criteria

Remove from service if any of the following are visible:

- Cuts, holes, surface abrasion or crushed areas
- Burns or chemical damage
- Separation of load carrying stitch pattern
- Hardware, fittings or tensioning devices which are broken, bent, twisted, cracked, or have nicks and gouges
- Knotted webbing
- Splices or other makeshift repairs
- Damaged loop ends

See illustrations of damaged webbing on page 16 & 17; damaged chain and hooks on page 85.

Definitions

Working Load Limit: The maximum load that may routinely be applied to an assembly or component in straight tension.

Ultimate Strength: The load at which an assembly or component will fail in testing.

Department of Transportation Regulations 393, 102(b) use Ultimate Breaking Strength to calculate the number of tiedown assemblies required to secure a load.

Lift-All publishes Ultimate Strength for this purpose only. For safety, we recommend that only Working Load Limits be used for your calculations.

Environmental Considerations

- Nylon and polyester are seriously degraded at temperatures above 200° F.
- Prolonged exposure to Ultraviolet light adversely affects nylon and polyester. Tie down straps become bleached and stiff when exposed to sunlight or arc welding.
- Many acids, alkalis and chemicals have an adverse effect on nylon and polyester. See chart on page 14.

Safe Operating Practices

- Inspect tie down straps and all hardware when load is first being secured.
- Re-tighten tie downs periodically during run.
- Never use *Load Huggers* for anything other than securing cargo. Do not use for lifting loads or towing vehicles.
- Load should be securely blocked and stabilized before tensioning the straps.
- Never exceed rated capacities.
- Use caution when tossing straps and chain anchor assemblies over a load.
- Check installation of portable winches - ratchet pawl must be at top of toothed wheel and bolts tight against the rub rail.
- Weld-on winches should not be cracked.
- Corner protectors and wear pads must be used to protect *Load Huggers* from edges and abrasion.
- All hardware must be in line with direction of pull to achieve full strength.

* CVSA - Commercial Vehicle Safety Alliance

WEB SELECTION

Two **styles** of webbing are available for our 2"-4" ratchet assemblies and winch straps:
Standard yellow and **Hi-Vis Tuff-Edge**.

Two **strength classes** are available for 2" assemblies: **Single Stripe** and **Double Stripe**.

Standard Polyester Tiedown Webbing

This webbing offers exceptional value for everyday use.

Hi-Vis Tuff-Edge Polyester Tiedown Webbing

The brightness of our new **Hi-Vis Tuff-Edge** tiedowns makes them more visible, easier to locate and harder to lose.

Single Stripe - Used for 2" assemblies with a 1,600 lb. Working Load Limit. Used in all 4" assemblies and winch straps. Approximately 1/32" thick.

Double Stripe - Used for 2" assemblies with a 3,300 lb. Working Load Limit. Used in all 3" assemblies and winch straps. Approximately 3/64" thick.

RATCHET ASSEMBLIES

Type A Assemblies One piece (endless) assembly for use without end fittings. Length measured from ratchet mandrel to end of webbing.

Type B Assemblies Two piece assemblies with one fixed length of webbing and one adjustable length of webbing. Numerous end fittings are available to handle any requirements. (See following pages)

Series 1,000

- 1" wide polyester webbing
- Ultimate strength - 2,100 lbs. *
- Working Load Limit - 700 lbs. *

Series 5,000

- 2" wide polyester webbing
- Ultimate strength - 5,000 lbs.
- Working Load Limit - 1,600 lbs.

Series 10,000

- 2" wide polyester webbing
- Ultimate strength - 10,000 lbs.
- Working Load Limit - 3,300 lbs.

Series 15,000

- 3" or 4" wide polyester webbing
- Ultimate strength - 15,000 lbs.
- Working Load Limit - 5,000 lbs.

Type B Measurement

Fixed end is approximately 16" long for 2" assemblies and 18" long for 1", 3" and 4" assemblies. Chain Anchor adds another 14" to fixed end length.

* When using flat hooks in Series 1,000, ultimate strength is 1,000 lbs., working load limit is 330 lbs.

1" TIEDOWN ASSEMBLIES

Load Huggers

WEAR PADS AND CORNER PROTECTORS

Sliding Sleeve

- Double walled tubular product
- Specify length when ordering
- Protects Load Hugger webbing from abrasion and helps resist cutting

Ratchet Protector

A sewn fabric pad used to protect surface finish of cargo and ratchet mechanism. Specify with order.

Corner Protector

A movable, rust-proof copolymer corner guard. Protects Load Hugger from sharp edges. Tough enough to be used with either chain or webbing. For other wear pad options, see pages 123-126 in the Accessories section.

WINCH STRAP ASSEMBLIES AND WINCHES

Series 12,000, Load Huggers 3 & 4 inch Wide Polyester Winch Assemblies

- Series 12,000 *Load Huggers* are made for securely mounted winches on flat bed trucks and trailers.
- Ultimate strength 15,000 lbs.
- Working load limit 5,000 lbs.
- Standard assemblies in 3" or 4" widths and 27' or 30' lengths
- Wear pads and corner protectors extend life of *Load Hugger* (see page 109)
- To order non-standards - specify width, length, and end fitting

Winches must be properly installed with ratchet pawl on top of toothed wheel to help prevent accidental disengagement.

Standard Winch #61222
For 3" & 4" Series 12,000
Load Huggers -7.8 lbs.

Portable Winch #61221
For 3" & 4" Series 12,000
Load Huggers - 8.8 lbs.

Winch Bar #61223
For use with 61221 and
61222 - 4.8 lbs.

E - TRACK AND VAN INTERIOR ASSEMBLIES

To order non-standard interior van restraint assemblies specify:

- Overall length
- Fixed Length
- Cam buckle or ratchet buckle
- Spring loaded E-Track, 3 piece E-Track or any of the end fittings listed in Series 5,000 *Load Huggers* (page 108) may be attached
- Ultimate Assembly Strength: 2,500 lbs. with Cam Buckle
3,000 lbs. with Ratchet
- Working load limit: 800 lbs. with Cam Buckle
1,000 lbs. with Ratchet Buckle
- E-Track only works with E-Track fittings

Standard E-Track Straps	Standard Part No.	Tuff-Edge* Part No.	Wt. (lbs.)
2" x 12' Cam Buckle/Spring E Track Fittings - Yellow	60805	TE60805	1.6
2" x 16' Cam Buckle/Spring E Track Fittings - Gray	60806	TE60806	1.7
2" x 20' Cam Buckle/Spring E Track Fittings - Blue	60807	TE60807	1.8
2" x 12' Ratchet/Spring E Track Fittings - Yellow	60808	TE60808	2.0
2" x 16' Ratchet/Spring E Track Fittings - Gray	60809	TE60809	2.1
2" x 20' Ratchet/Spring E Track Fittings - Blue	60810	TE60810	2.2

*Tuff-Edge web is yellow for all lengths.

Van interior restraint assemblies are only as strong as the anchor or track to which they are attached.

Cam Buckle and
3 Piece E-Track Fitting

Spring Loaded E-Track Fitting (standard)

Horizontal E-Track #60801
12 Ga. Steel - Primed
10 ft. Sections - 17 lbs.

Vertical E-Track #60802
12 Ga. Steel - Primed
10 ft. Sections - 17 lbs.

Note: E-Track can be cut into lengths suitable for UPS shipments.

LiftAll
PRODUCTS FOR BETTER LIFTING

Lifting Beams & Custom Engineered Lifting Devices

BASIC INFORMATION

Lift-All can provide a unique engineered device for your production requirements. Our custom devices range from large capacity beams to control and balance unwieldy loads, to fork lift attachments or small “S” or “J” hooks.

Features, Advantages and Benefits

Promotes Safety

- Specifically designed equipment makes each lift safer
- All equipment conforms to highest engineering standards and meets or exceeds government and industry regulations (ASME B30.20)
- Helps eliminate employee fatigue - raises morale and quality of work

Saves Money

- Productivity improves through efficiency when using properly designed lifting devices.
- Equipment can be designed to prevent costly load damage
- Rugged materials and construction provide long useful life

Inspection Criteria for Lifting Devices

Visually inspect lifting device and slings prior to each lift. Have competent person record inspection a minimum of once a year.

Check the following and correct before use:

- Structural deformation, cracks, excessive wear
- Loose or missing guards, fasteners, covers, stops or name plates
- Inoperable mechanisms including automatic hold or release devices
- Loose bolts or fasteners
- Cracked or worn gears, pulleys, sheaves, sprockets, bearings and chains
- Excessive wear of friction pads, linkage or other mechanical parts
- Excessive wear of hoist hooking points and load support clevises or pins

Safe Operating Practices

- Use only per ASME B30.20
- Check name plate to assure proper lifting capacity
- Lift a test load a sufficient distance to assure that the load is supported properly by the lifter and then inspect lifter for defects and deformation
- Instruct the operator in correct lifting practices including proper storage, load distribution, use of associated slings, temperature considerations, avoidance of obstructions, acceleration, side pulls and angle of lift. Read “Help” section, pages 3 through 12.
- Never lift over people and never ride the load
- For proper use of slings with lifting devices refer to ASME B30.9 and appropriate section of this catalog

How to Order - The Easy Order System

1. Photocopy appropriate drawing from the following pages
2. Fill-in your specific data
3. Fax to *Lift-All* at 717-898-1215.

Phone 1-800-909-1964

If we have questions, we will call you. Our engineering drawing will be faxed to you for approval and purchase order.

Prior to sling or lifting device selection and use, review and understand the “Help” section pages 3 through 12.

Tow-All VEHICLE STRAP

Vehicle Recovery Strap

Aids in removing vehicles stuck in snow, mud, sand and ditches.

Tow-All Vehicle Recovery Straps are made from strong durable *Tuff-Edge II* webbing with sewn eyes, lined with premium abrasion resistant webbing, on each end. The webbing is weather resistant and will not rot or mildew. It attaches quickly to vehicle frames or towing hooks.

Tow-Alls have a limited stretch. The elastic effect absorbs shock and aids in the recovery of disabled vehicles.

How to Order

Specify quantity and Part Number

Part No.	Ply	Web Width	Assembly Breaking Strength* (lbs.)	Rated Capacity (lbs.)
TS1802T	1	2	16,000	5,300
TS2802T	2	2	32,000	10,700
TS1803T	1	3	24,000	8,000
TS2803T	2	3	43,000	14,300
TS1804T	1	4	32,000	10,600
TS2804T	2	4	57,500	19,100
TS1806T	1	6	48,000	16,000
TS2806T	2	6	81,500	27,100

* Assembly breaking strength when new.

Tow-All Features, Advantages and Benefits

Promotes Safety

- Safer than chains or wire rope
- No dangerous hooks or metal parts

Saves Money

- Shock absorbing to reduce chance of vehicle damage

Saves Time

- Light weight and flexible for easy use and storage

Inspection Criteria for Tow-All

Remove from service if any of the following are visible:

- Signs of melting, charring or chemical damage
- Cuts on the face or edge of webbing
- Holes, tears, snags or crushed web
- Signs of excessive abrasive wear
- Broken or worn threads in the stitch patterns
- Any other visible damage which causes doubt as to its strength

Refer to photographs of damaged webbing on pages 16 & 17.

Safe Operating Practices

Read Definitions on page 3

- Do not use a damaged or defective strap - inspect before each use
- Do not exceed Rated Capacity
- Do not tie knots in strap
- Do not attach to bumpers
- Avoid dragging strap on ground
- Strap is permanently damaged when exposed to temperatures in excess of 200°F. Avoid muffler and hot exhaust systems.
- Stand clear of strap and vehicles when under load
- Avoid sharp edges, use padding where necessary
- Store in cool, dry and dark location

Note: Lift-All believes tow straps with metal end fittings are dangerous and, therefore, will not put metal hardware on TowAll straps.

CM MANUAL CHAIN HOISTS

All CM Hoists come with hardened alloy load chain and fully enclosed brake and housing for long life. Swivel hooks make connection and turning of load easy.

CYCLONE

Cyclone hoists are the premium grade manual chain hoists. Built for heavy duty use, these hoists are most often placed for permanent installation using the standard hook or mounting directly to a low headroom, plain or geared trolley.

- Cast aluminum body for strength
- Load Limiter - prevents hoist damage from excessive loads.
- Lifetime warranty against defects in workmanship and materials.
- Made in U.S.A.

SERIES 622

The Series 622 hoists are the economical choice in a quality manual chain hoist. Contractors favor the 622 because of its light weight and compact design.

- Stamped steel body for light-weight strength.
- Compact design for low head-room.
- One year warranty against defects in workmanship and materials.

[†] Add length after X to complete part number

¹ Pull required to lift rated load.

² Overhaul distance to lift load one foot.

CM LEVER PULLERS

Lever Pullers are highly versatile tools that can be used to pull, lift, drag or stretch. All CM Lever Pullers use hardened alloy steel chain for long life and forged steel swivel hooks with latches for safety and ease of use.

CM PULLER

Designed for heavy-duty construction and industrial applications. Fully enclosed lift wheel resists dirt and grit that can damage mechanism.

- Tough Aluminum alloy construction.
- Lifetime warranty against defects in workmanship and materials.
- Weatherproof
- Made in U.S.A.
- Low turning ratio results in quick chain movement

SERIES 653

Designed for close quarter, standard duty commercial applications. Short handle with low pull requirement makes these units easy to operate.

- Impact resistant, stamped steel frame, gear case and cover for durability and light weight.
- Hardened steel, redundant load sharing gears.
- Double pawl arrangement for optimum load control.
- Two chain guide rollers for precise chain fit.
- 5 year warranty.
- Rubber handle grip for added operator comfort.
- Minimal maintenance with no special tools required.

OPTIONAL OVERLOAD DEVICES FOR THE CM PULLERS

Two ways to protect your loads and lever pullers from overload damage are available as optional accessories to your CM PULLERS. Either device may be installed on your PULLER at time of order or ordered separately as a kit for simple installation on models already in use.

LOAD LIMITER

(Not available on Series 653)

Stops excessive lever force from being transmitted to the PULLER.

* Part No.	Std. Lengths (ft.)	Max. Cap. (tons)	Lever Pull (lbs.)	Min. Hook Distance (in.)	Lever Length (in.)	Hook Throat Opening (in.)	5 Ft. Net Wt (lbs.)

* Add length after X to complete part number

LOAD SENTRY

(Not available on Series 653)

Deflection of the handle grip warns the user when excessive force is being applied to the lever handle.

CM MINI-RATCHET LEVER HOISTS

Mini-Ratchet Lever Hoists can lift up to 1,100 lbs. but are small enough to fit in your toolbox! These ratchet lever hoists are the most compact on the market. They perform just like our larger models, plus come with these great features:

602MH

550 LB.
Capacity

603MH

1100 LB.
Capacity

Designed for close quarter, standard duty commercial applications. Short handle with low pull requirement makes these units easy to operate.

- Plated load chain
- Weston style load brake
- Rubber hand grip for better comfort and control
- Lightweight design for easy transport and one-hand operation in confined space
- Forged hooks with latches are standard
- Impact resistant, all-steel frame, gear case and cover
- Hardened link-type alloy steel load chain for strength and long wear
- Free wheeling feature serves to quickly attach the load
- Your choice of either 5 ft. or 10 ft. lifts

LODELOK WEB HOOKS

This hook can be used on both Web Slings and Tuflex Roundslings

- Engineered load bearing surfaces reduce bearing pressures
- Forged, positive interlocking nose latch fully engages tip of hook
- Locking mechanism designed for ease of use with gloved hand
- High cycling, long life spring
- Modified I-Beam construction for greater strength
- Forged alloy steel, quenched and tempered
- Every hook proof tested to 2 times its Working Load Limit
- Engineered flat in hook's eye improves performance with web slings
- No catch points to snag lines
- Finish coat electrostatically applied and heat cured

WARNING

TO AVOID INJURY: Replace hook if nicked, gouged, cracked or hook exhibits any deformation. Inspect tip and throat for misalignment or deformation. Never apply shock loads. Do not side load or tip load. Do not exceed working load limit. Do not apply load to latch. Apply load slowly.

WEAR PADS

The Importance of Wear Pads

The number one cause of synthetic sling failure is cutting. When slings are cut, property damage and personal injury or death can result. Wear pads can help to reduce this problem by acting as a buffer between the load edge and the sling.

Used with steel slings, wear pads help protect both sling and load from damage along points of contact.

Features, Advantages and Benefits

Promotes Safety

- Helps prevent sling cutting that can cause property damage, personal injury or death.

Saves Money

- Protects both sling and load from damage
- Increases sling life

Inspection Criteria of Wear Pads

If pad is damaged, the sling may also be damaged. Inspect both thoroughly and check slings for:

Web Slings

- Visible red core warning yarns
- Cuts on the face or edge of webbing
- Holes, tears, snags or crushed web
- Signs of excessive abrasive wear
- Broken or worn threads in the stitch patterns

Wire Rope Slings

- Broken wires
- Kinking
- Abrasive wear

Tuflex Slings

- Holes in cover that expose red striped white core yarn

Chain Slings

- Abrasive wear, nicks, bends, cracks, gouges or stretch

Safe Operating Practices

The sliding of slings along a load edge is a major cause of cutting. Loads must be rigged to prevent this.

Lift-All recommends that, prior to making a lift, the load be raised slightly, then lowered so that the wear pads can be inspected for damage. If pads show evidence of cutting, the lift should be tested again using different pad material. Contact *Lift-All* for pad alternatives.

▲ WARNING

Wear pads may not prevent cutting or other sling damage. To avoid severe personal injury or death, keep all personnel clear of loads about to be lifted and suspended loads.

- A - Tubular Quick Sleeve using Pukka Pad Material
- B - Flat Quick Sleeve using Pukka Pad Material
- C - Flat sewn sleeve using Webmaster 1600
- D - Sewn-On Wear Pad using PVC
- E - Edgeguard

WEAR PAD STYLES

SLEEVE TYPE		
Preferred for slings that are used in a variety of lifting situations. Easily repositioned along sling body to accommodate loads of various sizes. Sleeve allows sling to adjust to lift without movement against load edge.		
Flat Quick Sleeve	Use with: All Slings Available materials: All (except PVC)	Velcro* allows easy installation and removal. Friction keeps sleeve in place when rigging.
Tubular Quick Sleeve	Use with: <i>Tuflex</i> Roundslings Chain and Wire Rope Slings Available materials: All (except PVC)	High strength Velcro* for secure positioning, tubular design gives maximum useable surface and maximum pad life.
Flat Sewn Sleeve	Use with: All Slings Available materials: All (except PVC)	Preferred for long term use on single sling. May be repositioned as needed along sling length. May require factory installation on slings with hardware and on single leg <i>Tuflex</i> .
Poly Pads	Use with: Web Roundslings (Limited range of sizes) Available materials: PVC	Slides easily along sling length for convenient sling protection. Must be installed at factory for web slings with hardware.
SEWN-ON TYPE		
For use on web slings where repetitive lifting situations subject known areas of the sling to cutting and/or abrasion. Eliminates the need to position pad before each lift.		
Sewn-On Wear Pad	Use with: Web Slings Only Available materials: All	For sling protection at expected wear points. Can be sewn anywhere on the sling, be any length and be on one or both sides.
Edgeguard	Use with: Web Slings Only Available materials: Texturized webbing or light duty leather	Helps protect edges of sling. Both edges will be covered to the length and position required.

WEAR PAD MATERIALS

Pukka-Pads (P) 5/16" Thick

- A high density, synthetic felt. Our best material.

Webmaster 1600 (N) 3/16" Thick

- Heavy nylon sling webbing with red core warning yarns.

Heavy Leather (HL) 5/32" Thick

- Genuine top-grain cowhide (may require multiple pieces for longer lengths.)

PVC Belting (PVC) 1/8" Thick

- Non-absorbent conveyor type belting.

Texturized Webbing (TN) 3/32" Thick

- A bulked nylon fiber is used to produce a thin webbing that has good abrasion and cut resistance.

Ballistic Nylon (BN) 1/16" Thick

- A thin, 2-ply wear resistant fabric made of bulked nylon fiber, appropriate for wider sleeves and bundling applications.

* Velcro® is a registered trademark of Velcro Industries B.V.

 2. Width of sleeve depends on the material being used. This chart is based on using Pukka Pad material.
 3. One or two ply only. For three or four ply, go to the next larger sleeve.

Poly Pads

Easily movable Poly Pads are made of tough, woven polyester fabric impregnated and coated with PVC. Easy to position on both web slings and tiedowns. Poly Pads are designed to give protection when lifting on load edges or abrasive loads.

Part No.	Poly Pad	Web Width (in.)
60115	3 1/2 x 12	1 - 2
60116	6 x 12	3 - 4

How To Order

1. Choose code for width and style

<u> </u> TQS	Tubular Quick Sleeve
<u> </u> FQS	Flat Quick Sleeve
<u> </u> SS	Flat Sewn Sleeve
<u> </u> WP	Sewn-On Wear Pad
<u> </u> EG	Edgeguard
<u> </u>	Poly Pad (Use Part No.)

2. Choose a Material

<u> </u> P	5/16" Heavy Duty Pukka-Pad
<u> </u> N	Webmaster 1600 Nylon
<u> </u> HL	Heavy Leather
<u> </u> TN	Texturized Webbing
<u> </u> BN	Ballistic Nylon (Tubular only)
<u> </u> PVC	(Sewn-on Wear Pads only)

3. Length of Sleeve

(if sewn-on pad, describe position on sling)
 Feet

4. For Use On

 Web Sling - Code or Width
 Tuflex Single-Leg - Code
 Double-Leg - Code

 Chain Sling Size inches
 Wire Rope Sling - Dia. inches

⚠ WARNING

Wear pads may not prevent cutting or other sling damage. To avoid severe personal injury or death, keep all personnel clear of loads about to be lifted and suspended loads.

HOIST RINGS

Hoist Rings Make Lifting Easy

Hoist rings provide the safest method of attaching pickup points to loads. Eye bolts, when lifted at an angle, tend to deform and fracture. Hoist rings are designed to eliminate this weakness.

Features, Advantages and Benefits

Promotes Safety

- Magnetic particle or X-ray inspection of components - assures highest quality
- Predetermines proper hook-up - discourages unauthorized rigging methods
- Designed for lifting at angles - safer than rigid eye bolts
- Fixed lift points prevent load and sling from slipping
- Every hoist ring stamped with rated capacity

Saves Money

- Hooks and slings are not in contact with load - reduces load and sling damage
- Alloy steel material - increases strength, reduces wear
- Black oxide finish - resists corrosion
- Highest industry quality for durability and longest life

Saves Time

- Easy hook-up and disconnect of load
- Full swivel and pivot action of Side-Pull Hoist Rings allows turning and flipping without unhooking
- Easy to Inspect

How To Order

Specify stock number.

Safe Operating Practices

Read and understand instruction sheet supplied with each hoist ring prior to use.

- Do not use a damaged or defective hoist ring - inspect before each use
- Do not overload
- Full thread length must be engaged and torqued according to tables-periodic retorquing may be required.

Hoist ring ratings apply to use at any angle. Be sure that sling tension does not exceed the rating of the hoist ring. Refer to "Effect of Angle of Lift", page 10, to determine sling tension.

Side - Pull Hoist Ring

Strong, flexible, allows full 360° swiveling and pivoting.

Center - Pull Hoist Ring

Designed for top of load mounting. The industry standard.

HOIST RINGS

Center - Pull Hoist Rings

The industry standard hoist ring. Designed specifically for top of load mounting. Popular size hoist rings (1/2 - 13 through 1 - 8) are offered with two or more bolt lengths. Use longer length with softer parent materials, the shorter with hard materials such as steel.

Proof tested to 200% of Rated Load Capacity.

WARNING

Do not exceed rated capacities. Be sure that sling tension does not exceed hoist ring capacity. Follow instructions on page 10.

** Stated load capacity based on specific thread torques as shown in chart.

*** Bolt kit contains bolt and retaining ring.

HOIST RINGS

Side - Pull Hoist Rings

This most versatile style of hoist ring is particularly suited for turning and flipping loads, but works equally well for top lifts. Used extensively in automotive stamping plants and injection molding operations for die changing.

- Full swivel & Pivot Action
- Alloy Steel, Black Oxide Finish
- Proof Tested to 200% of Rated Load Capacity
