Hydraulic Tanks, Reservoirs and Accessories

Lovejoy offers a complete line of hydraulic tanks, reservoirs and reservoir accessories for fluid power transmission applications. The line includes aluminum tanks, complete reservoirs, lids, gaskets, legs/casters and associated parts for reservoirs including a complete line of oil gauges, tank heaters and elastic bushings for routing hydraulic lines directly into the reservoir.

Features

- Aluminum tanks provide **twice** the heat dissipation of steel!
- No painting or priming of tank required
- Leak-free performance (100% factory tested)
- Improves system cleanliness
- Design flexibility
- Variety of options including
 - 6 tank sizes
 - Gauges
 - Legs and Caster options
 - Filler Breathers
 - Heaters
- Easily customized
- Lightweight
- Stackable
- Inventory space savings
- Aluminum tanks are superior to steel!
- No sharp edges - easy and safe handling

Models and Available Options:

Tanks are supplied standard with a drain plug. Lids, legs, casters, gauges, heaters, filler breathers, gaskets and other accessories are sold separately.

Notes: ■ * indicates: Standard setting.
■ Temperature interval 3° C.

Features

- Easy installation
- Heats hydraulic fluid temperature between 60° F [15° C] and 120° F [50° C] to improve system cold start
- Ideal for system retro-fits
- Minimizes fluid level required
- Suitable for vertical or horizontal mounting
- Integral magnetic clamps for collecting metal particles from fluid

Construction

- Tubular heater coil available in 250, 500, and 1000 W versions / 230V
- 3-pole elastomer cable (resistant against common hydraulic fluids)
- Push on cable screw joint

Selection Chart

The Selection Chart (right) shows the maximum maintainable temperature difference in relation to the reservoir size.

A reservoir with 630 l volume ① should be held at an oil temperature of 45° C with an ambient temperature of 20° C ($\Delta t=25^{\circ}\text{C}$ ②). The heating capacity needed here arises out of the point of intersection ③. In order to maintain the temperature, a heating rod with the next higher heating capacity of 2kW ④ will have to be chosen. By cold starts and on grounds of a shorter heating period, it is recommended to choose a larger heating rod (capacity factor 1.5 to 2.0 ⑤).

Example: Established capacity ~ 1.5kW multiplied by factor 2.0 = 3kW.... ⑤

Hydraulic steel tank acc. to DIN 24 339

Features

- Provides oil-tight and dust-proof sealing of hydraulic lines into the reservoir
- Reduces noise (elastomeric bushing insulates the oil line from the lid)
- Simplifies installation

Technical Data

- Maximum continuous operating temperature:
194° - 203° F [90° - 95° C]
- Excellent resistance against mineral oil, grease based, diesel, light fuel oil, vegetable oil and animal fat
- Low resistance against aromatic hydrocarbons (e.g. benzoyl), chlorinated hydrocarbons (e.g. trichloroethylene, and ester solvents)
