

# Office Workspace Lighting

# Light influences people

The right lighting solutions help create the experience of comfortable, flexible and stimulating working environments.

In today's evolving office environment, correct workspace lighting has become a critical **health, ergonomic** and **energy-related** concern.

Improper lighting goes well beyond either too much or too little light. Proper lighting takes into account individualized needs:

- It balances light levels, light distribution and contrast.
- It minimizes glare and reflections.
- It makes workers more productive, and
- It **saves energy**.

LED and fluorescent task lights have become the primary tool for companies looking to increase worker productivity and satisfaction through ergonomics. They have become the primary weapon for lowering energy and operating costs and for achieving both Energy Codes and LEED accreditations.

“Vision  
accounts for greater than  
80 percent  
of sensory perception”

7 Years of  
LED Design and Development  
has Made **Luxo**  
the **Most Experienced**  
Manufacturer of  
**LED Task Lights**  
in the World

## What to Look for When Buying an LED Task Light

- ▶ **A product that guarantees 70% of initial light output after 40,000 hours of operation in a 24/7 application and warrants itself for at least 5 years** – The lamp life and efficiency of an LED is 100% dependant on the engineering of the product it is installed in. With a standard 40 hour work week, a well-engineered LED product should last more than 25 years. A manufacturer's warranty will often parallel their confidence in the LED product. The key determinant in a warranty is the percentage of light output or Lumen Maintenance. An LED will stay lit forever, but as time goes by it will get dimmer and dimmer. A quality product should give 70% of initial light output after 40,000 hours of use. Luxo warrants its LED products for a full 5 years. That is 43,800 hours in a 24/7 application.
- ▶ **A task light that can cover 70% of an 8'x8' workstation with 25-100 footcandles while consuming less than 8 watts of power** – A well-designed 13W compact fluorescent task light utilizing asymmetric distribution can cover over 70% of an 8'x8' workstation with an additional 25-100 footcandles. A well-designed LED fixture can do the same for under 8W. When compared to the traditional, and still today the most popular, fluorescent undercabinet lights, this is a true 84% energy savings. However, the paradox is that most LED "task lighting" solutions require multiple lamps/fixtures to accomplish this feat. To avoid any confusion, be wary of "system" solutions, and cabinet or shelf-based solutions, and ask for the Total Draw (total energy used, with the fixture both on and off) to determine the true savings.
- ▶ **An asymmetrically designed light which shields the user from unnecessary glare and reflections** – Bare, unshielded LEDs can produce glare which may harm both the user and others within the workplace. Make sure the LED task light you select has been adequately designed with an asymmetric light distribution to shield glare and reflections.

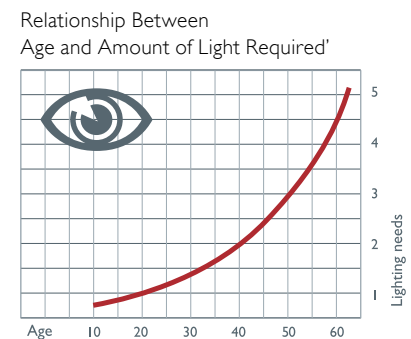

**L-70**

# The Luxo Solution: Two Component Lighting

There is an **ergonomic** and **energy-efficient** way to illuminate a workspace for maximum productivity. It is **Two Component Lighting**.

Two Component Lighting effectively integrates ambient or general office lighting with task or workspace lighting. It is a shared approach that leverages the right combination of indirect lighting in the general work area, supplemented by the proper use of adjustable energy-saving task lighting. It considers the common problems of glare and shadows caused by over illumination and improper light distribution in an office and most effectively addresses individual needs.

The solution to proper workspace lighting is not as simple as adding task lighting to existing lighting installations or removing overhead lighting. Two Component Lighting identifies the best combination of task and floor lighting, furniture and partition-mounted designs and indirect fixtures, providing a powerful, portable and flexible alternative to ordinary lighting. The system easily adapts to changes and continues to provide “the right light” at all times while considering currently accepted standards and codes

One of the keys to Two Component Lighting is obtaining correct contrast conditions in the office. Ideally the light (lux level) should be:

- Strongest in the primary work area (the keyboard, or the center of the desk) (2)
- Weaker in the rest of the work area (3)
- Weakest in the remainder of the room (1)

## Two-Component Lighting Offers Several User Benefits:

- **Lighting quality** – correct lighting simply helps users work better; be more productive
- **Ergonomics** – correct lighting not only leads to less strain on the eyes, it also helps to reduce the strain on the neck and back that often results from sitting incorrectly to see better.
- **Job satisfaction** – correct lighting means individually adapted and user-controllable lighting. A 40-year old needs twice as much lighting as a 20 year old; detailed work requires more light and workers concentrating for long periods of time need more light.
- **Energy-savings** – Incorrect lighting often means too much light. Many offices have light levels of up to 800 lux from floor to ceiling. This is entirely too much. Light should be varied throughout the room, increasing where needed.

## Different spaces require different levels of illumination.

Activity	Footcandle Level
Public Space	3FC (30Lux)
Simple orientation for short visits	5FC (50Lux)
Working spaces where simple visual tasks are performed	10FC (100Lux)
Performance of visual task of high contrast and large size	30FC (300Lux)
Performance of visual task of high contrast and small size, or visual tasks of low contrast and large size	50FC (500Lux)
Performance of visual tasks of low contrast and small size	100FC (1000Lux)

## Ergonomic Task Lights from Luxo

Luxo's **ergonomic task lights** are **unequaled** in:

- Providing glare-free, asymmetrical, individual and adjustable ergonomic benefits for health, comfort and work performance.
- Saving money on ongoing energy costs, with both energy-efficiency and properly directed illumination.
- Ease-of-use, with either free-standing bases or numerous options for mounting to different desks or furniture systems.
- Adjustability, with Luxo's fully-adjustable, spring-balanced arm technology.
- Even distribution of the right amount of light for both small and large worksurfaces, where you most need it.
- Reliability and safety, with UL, CSA and international certification and with production approved to ISO 9001 and ISO 14001 environmental certification standards.
- Design, never sacrificing either form or functionality.
- Value, in terms of quality, reliability, durability and price.
- Dependability, Luxo's products are backed by the strongest warranty on the market and over 75 years of experience.

### LUXO AT A GLANCE

For more than 75 years, Luxo has focused on people and their tasks, creating lighting tailored to individual user needs and preferences. Luxo's mission is to provide the right light. Luxo was founded in 1934 by Jacob Jacobsen, co-developer of the classic architect lamp, L-1.

The L-1 is still in production and to date has sold over 25 million units worldwide based on a multi-functional parallel movement arm with unique flexibility and durability. This lamp became the platform from which the Luxo Group evolved.

Today, Luxo is recognized as the leader in task lighting and offers the world's largest selection of ergonomic task lights.

# Air / Air LED

Design: Jukka Setälä

Asymmetrical task light with a feather-light spring-balanced arm in a simple and clean-cut design. Air LED has recently been redesigned to be even more energy-efficient and now includes a larger, more even, asymmetric light distribution, dimmable LEDs and a 9 hour automatic shut-off. With its clear expression, timeless design and excellent light distribution, Air is a fine choice for the modern office task light. The shade and arm have a metallic powder coating and the reflector is in bright polished aluminum.

## TECHNICAL INFORMATION

Lamp:	6.5W Dimmable LEDs (4x1.6W) Total energy consumed 8W or Halogen 35W (included)
Offstate Power:	LED: 0.3W
Luminance:	LED: 105 footcandles at 16 in. (1100 lux at 400 mm)
Color Temperature:	LED: 3250°K
CRI:	LED: 80; Halogen: 100
AC/DC Converter:	Electronic plug-in transformer
Power Cord:	5 ft. (1524 mm)
Mounting:	Edge Clamp

# L-1

Design: Jac Jacobsen, Luxo

Newly redesigned to be more energy-efficient after more than 70 years, L-1 is the world's first original architect lamp. Unique design, ingenious lighting properties and a flexible spring-balanced arm have earned L-1 a place among the world's all-time classics. L-1 is a prime example of how versatility, quality and stylish design produce an enduring icon. Since its creation, more than 25 million L-1 lamps have been sold worldwide.

## TECHNICAL INFORMATION

Lamp:	13W Compact fluorescent lamp (included)
Electrical:	Light wired for 120V, 60 Hz operation
Ballast:	HF electronic ballast
Power Cord:	6 ft. 2 in. (1879.6 mm)
Mounting:	Edge Clamp

Chrome LS task light available in Edge Clamp and Table/Desk Base models. Please contact Luxo Customer Service for project pricing.

# Ninety

Design: Shawn K. Littrell

Ninety - the world's most energy-efficient task light now includes automatic shut-off which turns the light off after 9 hours to further ensure energy savings. Using only 6.5W of dimmable LEDs, Ninety offers a bright, warm light with superb color rendering. A spring-balanced arm, rotating base and sleek head give the Ninety excellent range of motion. It is dimmable and designed to last for 25 years in a regular office environment. You will never have to change a lamp again.

## TECHNICAL INFORMATION

Lamp:	6.5W Dimmable LEDs (4x1.6W) Total energy consumed 8W
Offstate Power:	0.3W
Luminance:	105 footcandles at 16 in. (1100 lux at 400 mm)

# Ovelo

Design: Stephan Copeland

Uniquely designed LED task light for the modern office. Incorporates automatic shut-off which turns the light off after 9 hours to ensure energy savings. Ovelo uses 6W dimmable LEDs to illuminate an entire worksurface. Combination aluminum and steel construction. Covered spring-balanced arm provides complete flexibility of the pivoting arm and lamp head.

## TECHNICAL INFORMATION

Lamp:	6W Dimmable LEDs (4x1.5W) Total energy consumed 8.1W

# Terea

Design: Ryann Aoukar and Luxo

Combines energy-efficient LEDs, ergonomics and compact design for an incomparable value. Terea, which efficiently and cost-effectively illuminates any worksurface with maintenance-free operation, better articulates its ergonomics with the effortless tilt of its arm and complete flexibility of its head. This allows the light to fall exactly where needed providing optimal lighting and functionality.

# Solaris

Solaris is Luxo's first energy-efficient undercabinet light providing 33% energy savings over conventional products and allowing glare-free illumination for any size or shape workspace. Its sleek design makes it nearly undetectable when mounted to the underside of cabinets or shelves. A glare-eliminating optics system not only provides asymmetric illumination, but allows for stronger, wider light output. Models are individually sized to house T8 fluorescent light sources in a lightweight, easier-to-install and environmentally-friendly aluminum construction. An exclusive cord management system permits versatile mounting in the field.

Solaris provides 33% energy savings over standard undercabinets.

## TECHNICAL INFORMATION

# Spire

The first and still the best diffused LED undercabinet light on the market. With its low profile extrusion and patented frosted acrylic diffuser, Spire eliminates shadow and hotspots while distributing even and comfortable illumination on the worksurface. An effective cooling mechanism helps maximize LED performance.

## TECHNICAL INFORMATION

**LM-80 RoHS**  
**CE**

## SPIRE

Lamp:	10W High power LEDs (6x1.7W) Total energy consumed 11W
Luminance:	90+ footcandles at 18"

# Glider

Modular lighting system characterized by its slender elliptical light head, slim form and small dimensions. A perforated housing provides a soft glow of glare-free direct/indirect illumination “downward” while simultaneously providing a smooth distribution of light “upwards” through the top of the fixture. The Glider family of luminaires offers maximum versatility, design and lighting continuity through a range of partition, table and floor mounting options.

**A335-PR-439/A335-PR-254 GLIDER**  
**Partition** with indirect and direct light distribution.

**A335-SL-439/A335-SL-254 GLIDER**  
**Partition Solid** with indirect light distribution.

# Loft

Loft is a multi-versatile, furniture-centric direct/indirect lighting solution offering portability, design, lighting continuity and value through a range of mounting options all at economical prices. Partition and table models can be used alone or collectively to most effectively illuminate a work area. The aluminum post is formed from an aluminum extrusion and can be cut to any length. Available double switch allows for multi-level illumination.

## TECHNICAL INFORMATION

### Ordering Guide

To order a LOFT fixture you need to provide a minimum of 3 part numbers (see ordering guide below):

LOFT Head (1st part number)	Head Style	Lamping	Lamp Wiring
	C: Center O: Offset	A: BALLAST 4 LAMPS PLL 40 WATTS B: BALLAST 4 LAMPS PLL 25 WATTS	LR: Left/Right IO: Inner/ Outer LL: All
e.g.: LOFT-			
	C-	B-	IO

= LOFT-C-B-IO

LOFT

### LOFT Partition:

\*Illustration shows offset pole option

Standard Color: Silver

LOFT Pole (2nd part number)	Switches	Pole Length	Custom Length	Cable Plug Exit
	D: Dual Switching S: Single Switching O: None	12: 12 inches 36: 36 inches 48: 48 inches	Enter Pole length in inches (2 digits)	SIDE: Side BTM: Bottom
e.g.: L-POLE-				
	D-	48-		SIDE
	S-		38-	BTM

= L-POLE-D-48-SIDE  
= L-POLE-S-38-BTM

LOFT Mount (3rd part number)	Type of Mount		Custom
	PA: Partition	SMP: Standard Mini Plate	C: Custom
e.g.: L-MNT-			
	PA-	SMP-

=LOFT-PG

\* Please contact Luxo Customer Service for lead times and costs on custom options, including custom pole lengths and colors.

# Onda

Design: Isao Hosoe

Onda is a unique direct/indirect luminaire available in sine-wave or scalloped versions or as a single module. Each module consists of an extruded aluminum light rail which houses two 54W T5-HO lamps and a white perforated steel reflector that forms a “wave” shape when attached to the rail. The perforated reflector allows 32% of the light to filter through while redirecting 68% either upward or downward depending on which Onda configuration is utilized.

### F4401 ONDA Terminal Module Upwards

### F4403 ONDA Terminal Module Downwards

### F4405 ONDA Central Module Upwards

### F4407 ONDA Central Module Downwards

### Some possible configurations:

An Onda system is composed of at least two “Terminal” (end) modules (Up or Down). “Central” modules (Up or Down) are added for longer runs. Modules are suspended by double-wire suspension sets – one electrical feed suspension set per run and one standard suspension set per module. (Example: a run of 5 modules will have 1 electrical and 5 standard sets). “Terminal” and “Central” modules can be either “Up” or “Down” (determined by which side the reflector is on), but cannot be flipped from “Up” to “Down” or vice versa in the field or they will not properly connect with adjoining modules.

# Ondina

Designer: Isao Hosoe

Compact version of Luxo's award-winning Onda. Modular suspension lamp which provides softly diffused undulations of glare-free ambient direct/indirect lighting in a contemporary design. Formed of an oval body in drawn aluminum for housing the electric components and lightsource, Ondina can be installed singularly or in continuous rows, suspended by adjustable steel cables.

# Silvy

A family of luminaires with direct/indirect light distribution making it a highly versatile lighting solution. Silvy's reflector is formed from an external partly micro-perforated steel sheet with polycarbonate end caps. An internal frosted polycarbonate filter controls the direct emission of light. The Silvy family consists of partition, table and floor luminaires.

## TECHNICAL INFORMATION

**A48C-436 / A48C-455**

**SILVY Partition:** Luminaire for Partition Walls in “open space” offices with indirect and direct light.

**A48H-436 / A48H-455 SILVY Table Mounted:** Luminaire to be mounted on the desk top.

**PG SILVY Partition**

**Pagoda:** Version with upper reflector.

**A48A-436 / A48A-455 SILVY Floor:** Floor lamps with indirect and partly direct light, with stem in extruded aluminum and chromed steel tubes. Wired for four fluorescent compact lamps.

**PG SILVY Floor Pagoda:** Version with upper reflector.
