What's New from **GUEST**®

Intelligent Charging System

The most advanced chargers ever developed by Guest: microprocessor-controlled, user-friendly, efficient and reliable. The user can select the battery type per individual charger output, to match the precise charging needs. All in a charger that maintains the Guest heritage of harsh-environment performance. **Page 3**

ChargePro Plus Charger System

Battery Chargers and Voltage Sensitive Relay Modules

Users can run battery-operated accessories longer *and* recharge when the alternator is running. Harness previously unused or wasted alternator power for use by a vehicle's house battery/DC accessory system, for the utmost in charging efficiency and economy. **Page 2**

Poor Power Quality? Harsh Conditions? Rough Handling? *We Love Them!*

The original Guest chargers were designed for marine conditions: poor dockside power quality, exposure to extreme weather and very rough handling. Our epoxy-potted cases are the ultimate in durability – completely waterproof and able to withstand numerous caustic chemicals and gases, as well as being shockproof. All of our 115V chargers can handle input power fluctuating from 100 - 130V AC and between 50 - 60Hz.

Our three-stage chargers are also lighter than transformer types, completely silent, and still provide full output when overloaded outlets drop AC input below the normal 115 volts. All Guest chargers have a full two-year warranty.

GUEST®

3-Stage Chargers Maximize Battery Life

More batteries are ruined by improper charging than by over-use. The safest, most efficient way to charge batteries without making them too hot or boiling off electrolyte is in three distinct stages:

- **Bulk Stage:** The charger uses its full amp output (constant current), while the battery voltage rises.
- **Absorption Stage:** The charger regulates the battery voltage at a peak level (constant voltage) while the current flow to the battery decreases.
- **Float or Maintenance Stage:** Unlike some “trickle chargers,” which apply a constant current to the battery, the Guest float-charge technology only supplies current at the rate it will be accepted by the battery.

Guest 3-Stage Charging Modes

Guest Chargers at Work in Multiple Battery Configurations

In multi-battery applications, the needs of the individual batteries may vary. A “starting” battery, replenished by the alternator, requires a different kind of charge than a deeply-depleted constant-use battery.

Guest exclusive multiple-output models include separate boards within the charger housing. Each board functions independently in the charging scheme, and has dedicated cables for its battery, so it can adjust and optimize the charger's performance for that battery.

How to Choose Your Charger

This catalog is conveniently organized into product types (see right). Visit our website for more detailed product information:

www.guestindustrial.com.

Our Charger Specification Guide (see page 16) is a useful tool to help you organize information about your application and charger requirements. Providing answers to as many of these questions as possible will enable Guest to help you specify the correct charger.

In addition, for systems design projects or other technical-support issues, the seasoned Guest applications and engineering team can assist you.

For close-tolerance applications, precise dimensions or other design information, users are advised to request specific dimensional information from Guest.

ChargePro Plus Charger System

Battery Chargers and Voltage Sensitive Relay Modules

36082S

36202S Charger
with attached
36012 VSR

ChargePro Plus chargers offer harsh-environment performance plus the convenience of a companion Voltage Sensitive Relay module. This unique system is designed to harness previously unused or wasted alternator power for use by a vehicle's house battery/DC accessory system, for the utmost in charging efficiency and economy. Users can run battery-operated accessories longer and recharge when the alternator is running.

Chargers have **two outputs** – for a cranking battery plus a house battery or two house batteries. The chargers will recognize and provide full amperage on either output as the system requires. They are **fully potted** – for harsh environment protection, and feature Guest's **three-stage electronic switching technology** for maximum reliability, charging efficiency and to protect the load from over-charge. They are also **ignition protected** for safety.

GUEST® Intelligent Charging System (ICS) Chargers

Introducing the most advanced chargers ever developed by Guest: user-friendly, efficient and reliable, while maintaining the Guest heritage of harsh-environment performance.

A membrane-covered Control Center panel, located at the top of each charger for easy access, allows the user to select a battery type per output (AGM/Flooded or Gel). Easy-to-read LEDs provide charge status and alarm indication.

Electronic components are mounted on an anodized aluminum base for efficient heat dissipation and reduced weight. Circuits are coated in epoxy for protection from water or vibration. The charger case features slotted sides to provide convection cooling of the aluminum base plate while maintaining an IP65 Water-Resistance Rating.

GUEST®

Portable Chargers Single-Battery On-Board Chargers

A complete line of chargers and maintainers for 12- or 24-volt battery systems. Rugged design and construction for harsh-environment usage.

- Rugged, fully potted
- Electronic switching technology
- Short-circuit protected
- Reverse-polarity protected
- Overload protected
- Complete with AC and DC cables with connectors (see chart)
- Use with flooded, AGM and Gel Cell batteries

Many Guest® brand chargers are available in retail packaging which includes complete features and benefits information for easy consumer selection. (Does not include products marked "bulk pack only.")

GUEST®

Dual-Battery On-Board Chargers

Dual-battery chargers with single- or double-outputs. Each output is an independent charging system, insuring individual attention to each battery. Pre-wired or hard-wired chargers, to easily incorporate into your product.

- Rugged, fully potted
- Electronic switching technology
- Short-circuit protected
- Reverse-polarity protected
- Overload protected
- Complete with AC and DC cables with connectors (see chart)
- Use with flooded, AGM and Gel Cell batteries
- Independent outputs (see chart)

Available dual-battery chargers include models featuring studs for hardwiring (see chart).

GUEST®

Triple-Battery On-Board Chargers

Guest brand multiple-battery chargers are made to support the unique requirements of multi-task charging, up to 30 amps. Most chargers have multiple outputs. Each output is an independent charging system, insuring individual attention to each battery.

- Waterproof, fully potted
- Electronic switching technology
- Made for outdoor, harsh-environment use
- Short-circuit protected
- Reverse-polarity protected
- Overload protected
- Complete with AC and DC cables with connectors
- Use with flooded, AGM and Gel Cell batteries
- Independent outputs

GUEST® Mobility Chargers

Tough, fully automatic chargers meet ANSI-RESNA specifications to provide fast, quiet power for recharging powerchairs and mobility scooters. Portable chargers feature a sleek design and a small footprint for home or institutional use. An inhibit circuit effectively disables the mobility device while charging. On-board models have either low- or high-inhibit circuitry to meet specific OEM requirements.

Input cable has industry-standard 3-pin XLR connector.

- Resists corrosion and bodily fluids
- Electronics are fully encapsulated in epoxy for protection in hostile environments
- Quiet operation, without the buzz of transformer-based chargers
- Built-in electronic overload and thermal protection
- Short-circuit protected
- Reverse-polarity protected
- Meets FCC Class B requirements for radiated and conducted emissions
- Complete with AC & DC cables with connectors (see chart)
- Portable models have standard 3-pin DC XLR connector to fit most mobility devices and IEC connector with power cord
- Use with flooded, AGM and Gel Cell batteries

2503

For 12V and 24V systems. 24V systems must be equipped with 24V DC alternator.

GUEST® Beamer™ Remote Control Spotlights

Beamer spotlights from Guest have a powerful halogen beam that illuminates objects up to a mile away. They feature motorized remote-control operation, although the light can be directed manually without damaging its motors. Tough UV-stabilized construction is weather resistant.

- Console, wireless or joystick control
- Dual-station control possible
- 12V or 24V models
- Spot/floodlight models available
- Easily replaceable 100 watt halogen bulb
- Overall dimensions 10-3/8" H x 7-3/8" W x 9-1/4" D

CE All Beamer spotlights are CE listed.

GUEST® ConnectCharge™ Inlets

Installing a Guest Charger Just Got 15 Times Faster

Using ConnectCharge inlets eliminates cutting off the AC plug, purchasing an inlet, and the labor required to wire the AC cord to the inlet. With its patent-pending molded locking tab, the ConnectCharge battery charger plug simply snaps into the locking latch on the back of the ConnectCharge inlet. No extra labor necessary.

ConnectCharge Inlet Sleeves

PART NUMBER	DESCRIPTION
150CC.OEM	Inlet Sleeve, front mount, using screws, with PVC flap
150CCTM.OEM	Inlet Sleeve, thread mount with threaded locking ring, with PVC flap
150GCA.OEM	Inlet Sleeve, front mount using screws, with spring-loaded flip lid
150GCTM.OEM	Inlet Sleeve, thread mount with threaded locking ring, with spring-loaded flip lid

Charger Specification Guide

Copy this page as needed.
Please provide as much
information as possible.

In order to properly match a battery charger to an application, a number of factors that may influence the performance of the charging system must be considered. This is particularly true for OEM applications. Answers to these questions will help in specifying the correct charger.

Battery Information

Manufacturer: _____ Model no.: _____ Size (amp hours): _____
No. of batteries: _____ Type (choose one): ☐ Flooded ☐ Gel ☐ AGM
Describe the application: _____

System Information

Battery system (choose one): ☐ 12V DC ☐ 24V DC ☐ 36V DC
AC input (choose one): ☐ 115V AC ☐ 230V AC ☐ Universal AC
AC connector (choose one): ☐ Std. US ☐ 230V AC plug ☐ UK ☐ AU ☐ EU ☐ IEC
☐ Other _____ Cord length (6-ft. is standard): _____

DC connector: ☐ Ring terminals ☐ Alligator clips

Special connector required (part no.): _____ DC cord length (6-ft. is standard): _____

Desired recharge time (hours): _____ Temperature range for the application: - _____ C to + _____ C

Are there any electrical loads on the battery while the charger is turned on? ☐ Yes ☐ No

If yes, describe the load (control panel etc.) and max. amperage draw: _____

Specific voltage requirements (if not standard chemistry): Bulk _____ Absorption _____ Float _____

Choose one: ☐ On-board application ☐ Portable ("off-board") application

Is there a written specification for the charger? ☐ Yes ☐ No

Are there size constraints for the mounting area? ☐ Yes ☐ No

If yes, dimensions of mounting surface available: L _____ x W _____ x H _____

Inhibit circuit required? ☐ Yes ☐ No

If yes, controller manufacturer and model no.: _____

Type: ☐ high ☐ low ☐ open

Existing System (if appropriate)

Current charger being used: Manufacturer: _____ Model no.: _____

Issues or Concerns: _____
