Formable Precision Cable Assemblies

Pasternack's Formable Precision Cable Assemblies are 100% RF tested to the maximum recommended frequency for each configuration. The SMA straight to SMA straight assembly is tested to 18 GHz, while the Type N to Right Angle TNC version is tested to 6 GHz. There are 24 different connector combinations with four available cable choices. These precision cable assemblies are available in RG402 and RG405 type formable cable and can be ordered with or without a Black FEP Jacket material. The shield construction is a tinned conductive braid, allowing the cable to be formed by hand to its final shape. In many cases, this eliminates the need for precision drawings and tooling used on rigid cable assemblies, thus reducing time and cost while providing a custom fit. All of the options come in standard lengths from 6 to 24 inches and are available for same-day shipment. Custom length cables are also available upon request by contacting Pasternack Customer Service, directly, or through our website at www.pasternack.com.

Other standard features include:

- SMA Stainless Steel Coupling Nut Ni/Au-Plated Brass Body
- SMA Male Anti-Torque Nut to prevent the cable assembly from spinning during attachment
- ROHS compliant – Note: Tin Lead Solder available by request
- 100% RF Tested to Max Frequency
- 100% Hi-Pot & Continuity Tested

See Page 22 for Formable Precision Cable Assemblies

26.5 GHZ ARMORED TEST CABLE ASSEMBLIES

Product Features

- Rugged Armored Jacket
- 1.38 Inch [3.5cm] Bend Radius
- RoHS Compliant

Description

The 26.5 GHz Test Cables are highly suitable for severe test environments where rugged construction is necessary, or in any location where higher phase stability is needed. Their low-loss PTFE dielectric and solid center conductor ensure low insertion loss and outstanding phase & amplitude stability. Durable Passivated Stainless Steel connectors ensure repeated secure matings, while external armoring prevents bending the cable beyond it's minimum bend radius.

The 40 GHz Test Cables are highly suitable for severe test environments where rugged construction is necessary, or in any location where higher phase stability is needed. Their low-loss PTFE dielectric and solid center conductor ensure low insertion loss and outstanding phase & amplitude stability. Durable Passivated Stainless Steel connectors ensure repeated secure matings, while external armoring prevents bending the cable beyond it's minimum bend radius.

FAKRA CABLE ASSEMBLIES

To keep RF interconnection costs low and ensure high levels of electrical and mechanical performance for telematic applications, the German and American automotive industries have standardized high-performing, cost-effective RF connectors based on the FAKRA and USCAR standards. Pasternack introduces its new line of FAKRA connectors and cable assemblies to support the wide-array of applications that benefit from the demanding mechanical and environmental automotive requirements that FAKRA connectors meet. Using a standard metal SMB connector embedded within a plastic housing that is designed with multiple color-codes for easy identification, FAKRA connectors are designed to perform up to 4GHz at 50 Ω

PASTERNAK ENTERPRISES RoHS COMPLIANCE PROGRAM

Lead-free solder is now available for all cable assemblies upon request or online at www.Pasternack.com.

What is RoHS Compliance?

The European Union set forth the RoHS (Restriction of Hazardous Substances) Directive to establish environmental guidelines and legislation to reduce the presence of six (6) materials deemed hazardous to the environment. To comply, products entering the EU must not have a homogeneous presence of these materials above the following levels by weight percentage:

- Lead (Pb) < 0.1%
- Mercury (Hg) < 0.1%
- Cadmium (Cd) < 0.01%
- Hexavalent Chromium (CrVI) < 0.1%
- Polybrominated Biphenyls (PBB) < 0.1%
- Polybrominated Diphenyl Esters (PBDE) < 0.1%

At Pasternack, we recognize our responsibility as a supplier of coax connectors, cable assemblies, and components used within electronic-based systems and products that are targeted for RoHS compliance. We are fully committed to offering RoHS compliance on the majority of our products. We have completed a comprehensive evaluation and analysis program both internally and with our suppliers to establish and publish RoHS compliant statements for our products on our website.

Determining Pasternack RoHS Compliance

To determine if the product in our catalog is RoHS Compliant, please first refer to our website at www.Pasternack.com. For each part, we show an indicator of compliance using this symbol:

All products displaying this symbol on our website have been certified as RoHS Compliant. Click on this symbol to view the Certificate of RoHS Compliance for this product.

We recognize that you may have specific questions regarding RoHS certification on Pasternack's components and products. We will be happy to process all such requests as quickly as possible. Please direct any such requests to Pasternack Enterprises Technical Support via email at TechSupport@Pasternack.com or by calling Toll-Free within North America at 1-866-PASTERNAK (866-727-8376). International customers, please use +1-949-261-1920.

Methods Determining RoHS Compliance

RoHS Compliance is determined by a combination of supplier certification and engineering design verification. In most cases, Pasternack's products were determined to be RoHS Compliant. In many cases, the Compliance was through a stated Exemption to the RoHS Directive. As a supplier of coaxial connectors, adapters, and RF components, Pasternack uses materials such as Brass and Stainless Steel which contain lead as a percentage of weight above the 0.1% threshold, but are allowed through the Exemptions as of the October 21st, 2005 RoHS Directive amendment. Pasternack uses these Exemptions to the RoHS Directive where applicable.

What are the Exemptions?

RoHS Directive text as of the Oct 21st, 2005 amendment is underlined, and how it applies to Pasternack products is indicated below each Exemption.

ANNEX to ROHS DIRECTIVE 2002/95/EC

"Applications of lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) or polybrominated diphenyl ethers (PBDE) which are exempted from the requirements of Article 4(1)":

5. Lead in glass of cathode ray tubes, electronic components and fluorescent tubes.

Some Pasternack products use resistive and/or dielectric inks that contain lead in a glass phase and fall under this exemption 5.

6. Lead as an alloying element in steel containing up to 0.35% lead by weight, aluminum containing up to 0.4% lead by weight and as a copper alloy containing up to 4% lead by weight.

Most Pasternack products use metal alloys that contain lead below the maximum concentration values specified under this exemption 6. Specifically: aluminum alloys, brass, stainless steel, beryllium copper and phosphor bronze.

7. Lead in solders for servers, storage and storage array systems, network infrastructure equipment for switching, signaling, transmission as well as network management for telecommunications.

All Pasternack coaxial cable assemblies are made using solder containing lead (unless lead-free solder is specified), and may be used in network infrastructure equipment and therefore would fall under this exemption 7. This exemption is application specific, however, and we therefore leave it up to our customer to determine whether this exemption applies to their application.

Pasternack has loaded new part numbers for cable assemblies using lead-free solder on our website, using the format PE3xxxLF-yy, where "xxx" identifies the part using the existing corresponding item number, and "yy" identifies the length in inches. For example, PE3067LF-24 is the same as PE3067-24 (BNC Male to BNC Male, RG58C/U), except it uses lead-free solder to be fully ROHS Compliant.
