

Enhancing people's lives with lighting

Outdoor Luminaires Catalogue 2010 - 2012

PHILIPS

sense and simplicity

Enhancing people's lives with lighting

Light is a fundamental part of life. It gives us the natural rhythm of day and night, determines how we see things and brings the world to life. Accordingly, light has a major impact on our well-being, mood and emotions. It inspires, attracts, communicates, sets the scene and enhances our experience of architectural spaces.

Each year, we at Philips invest heavily in research to gather end-user insights, further deepening our understanding of people's needs, desires and aspirations. Combining these insights with our technological leadership, we are able to deliver meaningful innovations – advanced, energy-efficient products and systems that are designed around people and are easy to experience – solutions that will help us create a sustainable future.

Quality of life – the challenge of unparalleled urbanisation

A century ago less than 10% of the world's population lived in cities. By the start of the 21st century this figure had risen to over 50%, and by the middle of the century it will be over 75%. Faced with this unparalleled expansion, city authorities worldwide recognise the need to re-humanise the urban environment by tackling crime and vandalism, promoting tourism, developing local business and fostering local identity and pride.

Cologne, Germany. Winner city.people.light award 2005

city.people.light

Over the past decade, Philips has been engaged in a process – called city.people.light – to explore how light can be applied to enrich and simplify the human experience of the urban setting. city.people.light aims to stretch creative and intellectual boundaries towards more innovative and relevant solutions. To do this, we enrich our own thinking through extensive dialogue. We share ideas and network with partners such as the Professional Lighting Designers Association (PLDA), and we have established an annual city.people.light award in conjunction with LUCI (Lighting Urban Community International) Association.

city.people.light

"I helped my city save costs and protect the environment."
Mr Bouchet, Director of Public Lighting, City of Lyon, France

Lighting a greener urban future

The landscape of the lighting industry is changing fast, driven by the energy-efficiency imperative and the world of possibilities opened up by the LED revolution, not to mention legislative pressures such as Kyoto and the Energy-using Products directive. To help municipal decision makers keep up to date with the latest developments and the best solutions for creating a sustainable city, we are spreading the word under the theme of Sustainable Cities. In this way we want to help urban authorities reduce energy consumption, thereby helping to lower CO₂ emissions, and improve the quality of life in their towns and cities.

Sustainability – simple changes, major impact

Philips has a long-standing commitment to providing lighting solutions that improve people's lives and are environmentally sound. This is one of the cornerstones of our sustainability policy, whereby we strive to balance our social, economic and environmental responsibilities.

Proactively addressing environmental issues in pursuit of a sustainable, 'brighter' future, we are constantly exploring ways to maximise energy efficiency, minimise the use of hazardous substances and reduce waste. The four key themes at the heart of our sustainability drive for urban lighting are white light, energy management, night preservation and solid-state lighting.

Thanks to Philips' sustainable outdoor lighting solutions, it has never been easier to use light in a responsible way.

Best environmental choice

Our top EcoDesigned products carry the Green Product Logo. An independent external consultant has validated these products and confirmed that they are at least 10% better than comparable products in terms of energy efficiency, lifetime reliability and / or hazardous substances, and offer a better overall environmental performance.

Transforming your urban nightscape

Today, outdoor lighting solutions no longer have to rely only on yellow light. There is an alternative which is much more successful in combining the qualities of daylight with the energy efficiency associated with high-pressure sodium. This alternative is high-quality white light. High-quality white light can transform urban streets at night – and not just aesthetically, but also in terms of safety, security and energy efficiency.

Research has demonstrated that high-quality white light offers many clear advantages over yellow light. For example, the ambience is perceived as brighter, colours appear more natural and it is easier for pedestrians and cyclists to recognise the faces of other people and obstacles on the street. This greater clarity improves the general feeling of security. Because it improves visibility, especially in the periphery, which can be very important for motorists, white light can make the roads safer as well. And that's not all. Modern white light sources offer comparable or even better energy efficiency than high-pressure sodium lamps.

High-quality white light is the 'green switch' solution for outdoor installations, allowing you to realise significant savings in a variety of ways. For instance, it is possible to specify a greater distance between luminaires in new installations, to reduce the mounting height in refurbishment projects, or to instal lower wattage lamps in upgrades. This means lower running costs – and CO₂ emissions that are lower than was ever thought possible – as well as superior light quality.

Energy management – lighting only when it is needed

Energy management is a top priority. Many of the city, people, light concepts focus on energy management, possible ways of 'recycling' energy and different types of energy source (e.g. solar, gas, electricity). They also acknowledge the potential conflict between energy management and the increasing use of light for identity and communication. Against this background, the research indicates that issues of lighting design and energy management will become increasingly interlinked and convergent over the coming decade.

A 16, The Netherlands

Several options for energy management are proposed, from intelligent lighting, where the lighting is triggered by activity, to alternative energy sources and stand-alone solutions as well as flexible lighting installations that adapt to the rhythm of the day. This will help to fulfil people's needs and patterns of use throughout the entire 24 hours, simply by adjusting the source, intensity and direction.

We can manage – and reduce – our energy consumption by managing our lighting effectively. A good lighting application is characterised, among other things, by having precisely the right level of lighting in the right place at the right time. The required lighting level often depends on external parameters such as traffic volume, ambient brightness and weather conditions. When there is very little traffic on the roads, drivers do not require the same level of lighting as when traffic is at its heaviest. Similarly, why illuminate monuments in the middle of the night when there are few people out and about to see them? Dimming is an ideal means of saving energy without adversely affecting either light uniformity or safety.

Night preservation – light only where it is needed

There is growing public concern about a number of lighting-related issues such as night preservation and light nuisance on facades. Night preservation means reducing 'wasted light' at night while maintaining a safe level of visibility. At Philips, we design sustainable solutions to minimise obtrusive and stray light, thus reducing light pollution and saving energy.

Light nuisance includes 'light trespass', for example light that enters our bedrooms and prevents us from sleeping. There is also 'direct upward light', i.e. light that is wasted and can disturb the biorhythm of wildlife. 'Sky glow' prevents astronomers from seeing the stars, but also prevents the general public from enjoying the wonderful night-time atmosphere. Finally, 'glare' has a direct impact on our visual comfort, but also on our safety because it reduces our ability to see.

We need to find a healthy compromise, a rational medium, between the darkness of the night sky and the bright glare of light pollution. A good place to start would be to minimise the intensity of urban lighting. Lighting is therefore managed as a functional asset for people's guidance and comfort in the city. The lighting solution would take the form of minimal light dots distributed precisely and integrated into the streets around us. Such an approach would enable us all to experience the night in a more natural way.

Philips has a wide range of outdoor lighting solutions designed to deliver the required quality and quantity of light while also reducing light pollution and saving energy.

Solid-state lighting – solid progress

Solid-state or LED lighting represents the most significant development in lighting since the invention of electric light well over a century ago. Offering excellent light quality and unprecedented design freedom in terms of colour, dynamics, miniaturisation and architectural integration, it is opening up exciting new possibilities, e.g. for scene setting and ambience creation.

Suzhou science and culture art centre, China

Architect: Paul Andreu; Paris, France

Lighting design: Mr. Y. Nakamura; Tokyo Shomei Consultant Co., Ltd., Tokyo Japan

LEDs provide a completely new form of lighting. Linear LED light sources and the rise of grazing lighting applications are changing the way we use light. The light output of LEDs is increasing rapidly, making them suitable for general lighting applications. LEDs are more energy efficient than most existing light sources, especially if we take into account their optical efficiency. And things will only get better, with their level of efficiency more or less doubling every two years.

From theatre sets and television studios to renowned architectural structures, interiors and artworks, Philips' customers are pushing the boundaries in their forward-looking use of light to enhance spaces, build brands and appeal to the imagination.

Your partner in lighting design

Professional lighting design requires consideration of the amount of functional light provided, the energy consumed, as well as the aesthetic impact of the lighting system. Philips offers calculation software and plug-ins for commercial software to assist you in the development of your technical and architectural lighting designs.

Calculux

This lighting-calculation software allows you to select and evaluate your lighting design in a variety of simulated environments (e.g. sport fields, parking places, industrial areas, streets, highways)

Software-plugin-ins for commercial software

With the Philips Product Selector plug-in you can easily select your required luminaire configuration in your favourite software and incorporate the unique data this provides into your design. The plug-in includes all photometrical data and a large collection of 3D models suitable for most visualisation programs. The plug-in is available for DIALux, RELUX, Autodesk's 3D Viz, 3DS MAX and others.

For more information and downloads please visit: www.lightingsoftware.philips.com

Philips Lighting's online catalogue – fully up to date and available 24/7

With Philips Lighting's online catalogue you can instantly access and view our full portfolio of professional lighting solutions – including luminaires, lamps, gear and controls.

Reflecting our commitment to rich, simple user experiences as well as sustainability, our e-catalogue (www.lighting.philips.com/gl_en/catalogue) offers visitors a more engaging, dynamic and informative interaction, as well as being kinder to the environment.

Easy to experience

You can browse the e-catalogue in much the same way as you'd use the printed version. As well as offering easy navigation by category (new products, application areas, green products, LED products, etc., often with convenient segment clustering), the e-catalogue features advanced search functionality, so you can be sure of finding what you're looking for.

Always up to date

A key benefit of the online version of the catalogue is that it's always fully up to date, so you can make informed choices based on the very latest information on our products and systems.

Downloads

Last but not least, you can download the product images, drawings and photometrical data for your own use. Installation instructions and datasheets are also to be found in the e-catalogue.

Urban lighting

Place Jean Jaures, Castres, France
Lighting design: ETI Stinville, René Stinville
Photography: Ville de Castres

A vibrant future

Philips believes that cities, towns and villages should be warm, inviting places that people enjoy living in and visiting. Urban development and regeneration programmes are increasingly focused on rehumanising the urban environment, and we believe lighting has a vital role to play in this regard, creating an appealing, inclusive ambience.

This belief has led Philips to create a range of lighting solutions in which state-of-the-art technology in light sources, optics and materials is combined with clear, elegant design that strikes a balance between contemporary and traditional style.

Lighting streets and pedestrian areas

Lighting plays a central role in how people feel about their city, town or village. That's why the illumination of streets and pedestrian areas has evolved from simple functional lighting into a more demanding and creative discipline. It should not only provide light in which people can drive, cycle and walk safely, but must be pleasing and inviting as well. It should promote communication and well-being, encouraging night-time socialising and complementing the city's night life. Luminaires for street and pedestrian lighting also have an architectural role. During the day they become an integral part of the street scene. Philips range of architectural street luminaires has been designed with this in mind, offering a winning blend of performance and style.

Lighting residential areas

For many years residential lighting was purely functional. And although safety, security and orientation remain essential requirements, there is now a drive to improve the residents' quality of life, creating a pleasing identity for these often-overlooked parts of the city.

Tailor-made solutions

In addition to our standard range of products, we can provide custom lighting products to create architectural signatures that match the desired vision or identity of the city, town, area or village. In many cases we can also apply standard products in original and imaginative ways, enabling cost efficiencies.

To optimise the benefits of lighting and achieve a cohesive result, the creation of a 'masterplan' by a lighting expert is strongly recommended.

Breskens, The Netherlands

Complete solutions

These days, cities are looking for solutions that are not just made up of light points but actually contribute to the identity of the city. For our key ranges, we have designed several ranges of masts and brackets to fit every style in an elegant way. Modern or classical, single or twin bracket, with an optional mini pedestrian luminaire, there is a complete solution available for your project.

Visualisation service

Not everyone is a technical expert – many people find a visual presentation of the end result helpful when weighing up options. We can integrate a large variety of luminaires and masts on a snapshot of your location.

Contact your local Philips representative for more information.

UrbanScene

UrbanScene – all that a city needs

UrbanScene is a range of complete lighting solutions comprising five highly distinctive urban lighting luminaires, plus dedicated masts and brackets. Their flexibility, coherent design and outstanding optical performance allow them to fulfil all main applications – street lighting, area lighting, illumination and image projection.

UrbanScene's energy saving features (high efficiency lamps, electronic gear) enable local authorities to adopt a sustainable approach to urban lighting.

Designed to be unobtrusive, night-preserving and fully recyclable, UrbanScene has an elegant daytime appearance. Smart brackets allow total flexibility in aiming, while preserving the overall appearance of the light point.

The UrbanScene range consists of small and medium-sized luminaires, as well as gobo projector, LED and indirect versions.

UrbanScene CGP703 - HID indirect lateral luminaire

UrbanScene BDP704 – LED post top

UrbanScene CDP702 – architectural indirect luminaire

UrbanScene CGP701 - gobo projector

UrbanScene CGP700, small version

UrbanScene CGP705, medium version

Two CGP705 luminaires on mast

One CGP700 and one tilted CGP705 luminaire on mast

CGP705 with CosmoPolis Open optic
R60 (OOC)

The UrbanScene series currently consists of six luminaires. The small CGP700, which offers a choice of bundles and accessories, is ideal for low-power lighting of streets and objects. The medium-sized CGP705 – designed to have enough space for CosmoPolis or MASTERColour CDM-T lamps – is optimised for street and area lighting.

CGP705 with Mini T-Pot for CDM-T
(TPS)

CGP705 with asymmetrical optic

CGP700 with CosmoPolis Open optic
R60 (OOC)

CGP700 with 60° beam

CGP700 with 4° beam

CGP700 with 10° beam

CGP700 with 20° beam

CGP700 with 40° wide beam

Volgograd, Russia

Pierre Nègre, L'Atelier Lumière

Architectural lighting

Image projection

Area lighting

Street lighting

CosmoPolis & mini T-Pot optics

The road optics are ideal for street lighting. It is suitable for use with compact burner lamps, providing very good spacing.

Application:

- Street lighting

Luminaire version:

- CGP700 (small version)
- CGP705 (medium-sized version)

Rotational optics 4°, 10°, 20°, 40°, 60°

The wide range of beam widths from very narrow beams to extra wide beams enables the creation of different lighting effects.

Application:

- Decorative area lighting
- Architectural lighting, accent and front lighting

Luminaire version

- CGP700 (small version)

Indirect bidirectional optic TB-IO

The bi-directional reflector projects light on both sides, thus optimising spacing.

Application:

- Pedestrian street lighting: Footpath, cyclepath, promenades

Luminaire version

- Indirect Post-Top

Asymmetrical optic

The asymmetrical optic has been designed for area lighting. The sharp beam minimises light nuisance.

Application:

- Functional area lighting: parking

Luminaire version

- CGP705 (medium version)

Projector

Application:

- Image projection: to project pattern on the ground (stars, leaves, characters, etc.)

Luminaire version

- CGP701 (projector)

Optical performance:

- Fixed focus
- Image can be sharpened
- Projection distance: from 4 to 15 m

Indirect symmetrical optic TS-IO,**T-IO Optic Urban LED**

These optics create rotational symmetric distributions on the floor.

Application:

- Pedestrian street lighting

Area lighting

Luminaire version

- Indirect Post-Top
- Urban LED Post-Top

Complete solution

Masts have a simple and unobtrusive cylindrical shape for allowing the installation of the luminaires at whatever height is required by the application.

Luminaires have been designed to be oriented in any position without impacting the daytime appearance of the light-point. Although UrbanScene offers huge flexibility in terms of luminaire installation, the cables are never visible from outside.

All complete solutions are EN40 compliant.

Functional street

Mast:

- To match your requirements, masts can be either in galvanised steel or in aluminium.

Finishing:

- Philips Dark grey as standard. Other RAL or AkzoNobel coatings on request.
Aluminium specific finishing possible.

Mast height:

- Height of masts: from 4 to 12 m.

UrbanLine

UrbanLine – enhancing people's well-being and preserving the environment

Representing a breakthrough into functional outdoor LED lighting, UrbanLine is a system and retrofit outdoor LED luminaire that delivers light in a sustainable and energy efficient manner, while still fulfilling all the requirements in terms of safety and city identification.

Its contemporary design, which reflects the lighting function, provides urban planners with an interesting solution for street applications.

UrbanLine delivers a visually comfortable and uniform white light with good colour rendering in excess of 80. It is available in two colour temperatures: warm white (3000 K) and neutral white (4000 K). Featuring high-power LEDs combined with smart optics, UrbanLine offers an environmentally friendly lighting solution – consuming up to 51% less energy than traditional street lighting - through exploiting the benefits of white light.

UrbanLine is a flexible and complete solution that enables architects, urban planners and lighting designers to address multiple lighting applications in residential areas. The range comprises four luminaire configurations and a dedicated mast, which is available in several heights. The duo version has LED modules on both sides. The retrofit version is available fit either 60 or 76 mm diameter masts.

BPP406 4 MBP-W120

UrbanLine	
Type	BPP407
Light source	6 or 12 x SMD LED-HB
Light colour	Warm white 3000 K (WW) Neutral white 4000 K (NW)
Power supply	110-240 V AC / 50-60 Hz
Power consumption	18.3 or 35 W (typical)
Inrush current	20 A/60 µs
Optic	Combination of collimator and reflector
Optical cover	Glass, flat
Options	Lumistep (pre-programmed dimming) 1-10 V input (dimming via external control) Photocell: minicell
Materials and finishing	Housing and bracket: high-pressure, die-cast aluminium, non-corrosive Cover: tempered glass Reflectors: anodised aluminium, brightened 99.99% Collimators: acrylic Gasket: silicone rubber, heat resistant

Colour	Silver grey, approx RAL 9006 (GR) Other RAL colours available on request
Installation	Post top mounting: axial entry, 120 x 120 mm, 100 x 100 mm or Ø 60/76 mm Operating temperature: -20°C < T _a < 35°C Recommended mounting height: 4 to 6 m Standard tilt angle post top: 10° (fixed angle) Adjustable light distribution: 0 positions Windage area of luminaire without mast: 1 module version: 0.070 m ² 2 module version: 0.081 m ²
Lifetime	50,000 hours (70% lumen maintenance)
Remarks	CRI >70 Constant light output
Main applications	Residential areas

Lightcolumn

Lightcolumn – remote beauty

With its innovative, contemporary urban design, Lightcolumn HGP440 is very much the luminaire as 'aesthetic object'. The Lightcolumn features Remote Light Source technology, which distributes light from the base to the top, with different perforated masks creating decorative light patterns on the column. There is a choice of three reflective top units: conical, symmetrical and asymmetrical. This luminaire is ideal for creative applications in relatively large, visually distinctive areas.

www.philips.co.uk/lighting

Lightcolumn	
Type	HGP441/442/443 (column extrusions) GGP441/442/443 (column top covers) EGP440 (control gear units)
Light source	HID: 1 x MASTERColour CDM-T / G12 / 70, 150 W 1 x MASTER SDW-T / PG12-1 / 100 W
Lamp included	No
Ignitor	Semi-parallel (SP)
Materials and finishing	Column, top brackets and top cone: die-cast aluminium Reflective disks: glass-fibre-reinforced polyester Light-output lens and light-guidance tube: PMMA Optical light film: PMMA/PC Perforated masks and light-slot cover: steel sheet

Colour	Dark grey RAL colours available on request
Accessories	Extension for embedded foundation, base covers
Main applications	Shopping and pedestrian areas, parks, promenades, squares, business centres

A complete configuration consists of: Column extrusion (HGP), control gear unit (EGP), reflector disc (GGP), and decorative column base cover (ZGP). To be ordered separately.

Metronomis – turning vision into reality

Metronomis is a family of ten highly distinctive luminaires and dedicated supports (masts and brackets), which can be used with a wide variety of optics to provide architects and lighting designers with the total solution needed to create a unified, consistent lighting design that still reflects the differences in urban culture and history. In its daytime appearance, Metronomis integrates harmoniously with any street scene, while its night-time appearance is both functional – guiding people and traffic safely through the city – and decorative, creating a pleasant ambience in city squares and pedestrian precincts.

Bordeaux

Brussels

Porto

Oslo

Metronomis masts, brackets and adapters

One of the main characteristics of the Metronomis range is the total solution that it offers architects and lighting designers. Architectural enhancement can only be fully realised when both the luminaires and their supports are part of an integrated concept. To this end, Metronomis includes a range of dedicated masts and brackets which are consistent with the visual style of the luminaires.

There are five different designs of masts available in steel, aluminium, and wood, from 3.5 to 12m. Steel and aluminium masts can be painted standard Philips ultra dark grey, with other colours and finishes upon request. Wooden masts are floated-oak-coated. Other wood-shades are available upon request.

The Fuzo mast, with its fluid shape, integrates perfectly in the urban landscape. The mast has been designed by AREP and offers a slightly curved profile. In addition to that, the blend of wood and steel gives this urban furniture a modern and stylish look.

Metronomis Torino on Fuzo wooden mast – enhancing public spaces

The simple, elegant outline of the Torino integrates harmoniously with most modern urban environments. The housing has been kept as small as possible, and the transition from luminaire to mast is smooth. After sunset, the Torino offers excellent lighting performance. Depending on the combination of light source and optical element chosen, the Torino can create a variety of atmospheric and spatial lighting effects.

Metronomis Berlin on Fuzo wooden mast – the old and the new

The Berlin combines a traditional outline with contemporary styling. Referring to ancient gas lanterns, it has been designed primarily for urban areas that embrace history without copying the past.

Metronomis Cambridge on Fuzo wooden mast – urban archetype

The Cambridge can be seen as a contemporary version of the classic street lantern. Special attention has been devoted to the lighting effects required to enhance the ambience of historical areas.

Metronomis Malmö on Metronomis aluminium mast – atmospheric lighting

The Malmö combines direct lighting with a gently reflected light effect through the use of a reflective disc. With its transparent design, the Malmö creates the impression of a virtual ceiling in public places. Because of the subtle support, the reflector seems to float around the light source. This effect becomes even more prominent after dark.

The Metro mast has a soft transition between the base and the pole, making it fit for post-top installation. When combined with brackets, it becomes an integrated solution for urban environments.

The cylindrico-conical mast, simple and elegant, discreetly blends in with the architecture itself.

The Step mast, made from steel segments of different diameters, gives a visual rhythm to streets.

The Curve mast, intended for the Metronomis 2 range of luminaires, turns street lighting into an architectural feature.

Metronomis brackets are available in Straight and Curved design, in two different lengths.

Combination of Metronomis Bordeaux on long curved bracket and Torino with short curved bracket on a Metronomis aluminium mast, thus creating harmony.

The Bordeaux – available with 0, 2 or 4 arms – offers tremendous flexibility, both in installation and in light distribution and effect. Used in conjunction with a choice of dedicated supports, including a catenary adapter, this luminaire is extremely versatile. Because a variety of lighting applications are possible within a single design concept, the Bordeaux can function as a harmonising element within the cityscape.

Metronomis Bilbao on a cylindro-conical mast – emphasising visual direction

The Bilbao has been specially designed for areas where a directional light distribution is desirable. In post-top applications, or mounted on one of the specially designed brackets, the light is shielded on one side to prevent glare in a certain direction or to distinguish between areas with different functions.

Metronomis Annecy on a step mast – light for living spaces

The Annecy is ideally suited to modern residential areas. Variation in lighting effect and design can be achieved through the use of a clear, opal or painted cover. By using different light sources and optical elements, it is possible to create different accents and atmospheres.

Combination of Metronomis Brussels on long and short curved brackets – functional and aesthetic

The Brussels luminaire is designed to fulfil rational lighting requirements without compromising on aesthetic appeal. The product concept includes sophisticated reflectors for directional light distribution. Preventing light output to the upper hemisphere, the Brussels luminaire offers an effective solution in cases where light pollution needs to be reduced.

Metronomis Oslo on Metronomis Curve mast – visual appeal

The Oslo has a distinctive and innovative design. The Ambient Light Effect (ALE) generates soft lighting effects thanks to the use of an opal bowl in combination with characteristic reflective screens. The Oslo's indirect lighting fosters the perception of a virtual ceiling.

CitySpirit

CitySpirit – streetwise

CitySpirit is a range of street lighting luminaires designed to provide excellent, environmentally friendly lighting without compromising on architectural appearance. The distinctive designs are clearly linked yet allow modularity.

To ensure perfect integration in the urban streetscape, the luminaire, mast and bracket of CitySpirit have been developed as one design. The range provides elegant and above all complete project solutions. Furthermore, transparent materials have been used to lighten the daytime appearance.

CitySpirit incorporates several optical concepts, which address issues such as spacing, night preservation, visual comfort and light trespass.

All CitySpirit indirect versions are retrofit luminaires, which can be equipped with conventional or LED light sources. In combination with different optical reflectors they deliver indirect high-quality warm white light. CitySpirit indirect LED has an upgradeable LED light engine, which ensures future-proof performance. Together with its constant light output and dimming functionality, the LED version ensures the highest operational efficiency.

The range further comprises Cone, Torch, Modern Lantern, Classic Lantern, Street, Street Colour, Wall mounted and Bollard models.

www.philips.co.uk/lighting

Clean lines

This range has been designed with the aim of creating unobtrusive luminaires. The use of transparent materials combined with aluminium components creates clean lines throughout the range.

Application driven

Because every application deserves to be illuminated adequately, we have created several new optical concepts which address issues like spacing, night preservation, comfort and light trespass and are suitable for any application.

The language of light

Urban lighting should complement the architecture, so we have endeavoured to create a family of distinctive designs that are clearly linked yet allow unique modularity.

Light Trespass

Sometimes citizens find even the best lighting installation obtrusive. For such cases we have developed the Light Trespass accessory, one for each luminaire and one for every optic.

The Light Trespass can be fitted freely inside the luminaire after it has been installed, preserving the look of the luminaire and reducing the light level on facades by up to 50 %, thus giving rise to lighting levels below 25 lux.

Wall mounted

In smaller streets it is not always possible to use masts. Wall mounting is then preferred, but for this the luminaire must have a top cover of a smaller diameter. Combined with the Light Trespass accessory and the many optical systems, this version will help improve the street scene.

Street Colour

Bollard

In green areas or at the entrance to a building, bollards can add the finishing touch to an installation whilst also providing guidance. Incorporating the same optical system as the rest of the range, including the Light Trespass, this bollard completes the family.

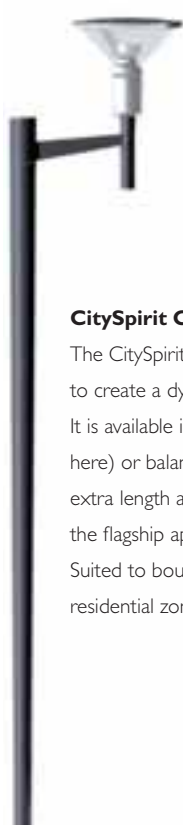

CitySpirit masts and brackets

Safety has traditionally been the primary concern of city lighting, but today the aesthetics of the lighting solution are equally important. To ensure perfect integration in the urban architecture, the luminaire, mast and bracket of CitySpirit have been developed as one design. The range provides elegant and above all complete solutions for your project. For example, the Taper mast lightens the daytime appearance, in line with the transparent look of a Cone luminaire. A dedicated wall mounted bracket ensures a clean installation of the Torch in smaller streets. And the twin mast allows a double installation of the Street luminaire.

CitySpirit Cone on Taper mast

A reverse conical column lightens the daytime appearance, in line with the transparent look of the range. Its modern shape is well fitted for city centres and residential streets. Best fitted with Torch, Lantern, Cone luminaire.

CitySpirit Cone on single bracket

The CitySpirit bracket is slightly angled to create a dynamic effect. It is available in a simple (as presented here) or balanced version, where an extra length at the bottom emphasises the flagship appearance. Suited to boulevard and residential zones.

CitySpirit Classic lantern on double bracket with decorative element

Designed for twin installation, the CitySpirit bracket is slightly angled to create a dynamic effect. It is available in a simple (as presented here) or balanced version, where an extra length at the bottom emphasises the flagship appearance. Suited to boulevard and residential zones.

Wall mounted bracket balanced version

Wall mounted bracket simple version

CitySpirit wall mounted bracket with or without decorative element

Based on the CitySpirit bracket, the wall-mounted accessory is suited to small streets, with the wall-mounted luminaire and its reduced top hat. It is available in a simple or balanced version, where an extra length at the bottom emphasises the flagship appearance.

CitySpirit on Tilt mast

Seemingly defying gravity, the Tilt mast for the Street luminaire is angled to create a tree-like dynamic effect. It is suited to city centres, commercial streets and roundabouts. The Twin version allows for a balanced visual appearance in the middle of the street.

Optical elements

Direct louvre

This polished aluminium louvre has been developed with comfort in mind, avoiding a direct view of the light source. Ovoid lamps are preferred since they reduce possible glare at low viewing angles.

Total Light Output Ratio > 35 %

Upward Light Ratio < 15 %

Available for:

Reflector direct/indirect

The direct/indirect aluminium louvre allows part of the light to be emitted upwards, onto the cover of the luminaire. This creates the night-time appearance of the luminaire and softens the lighting pattern.

Ovoid lamps are preferred since they reduce possible glare at low viewing angles.

Total Light Output Ratio > 45 %

Upward Light Ratio < 5 %

Available for:

Diffuser

The PMMA diffuser emits a soft light in every direction, thus creating ambience.

Total Light Output Ratio > 65 %

Upward Light Ratio < 15 %

Available for:

Prismatic

The PMMA prismatic optic is a sophisticated and efficient refractor that creates a sparkling effect with very good spacing.

Total Light Output Ratio > 70 %

Upward Light Ratio < 10 %

Available for:

Indirect standard

The indirect system is based primarily on an aluminium parabolic reflector that controls light and hides the lamp from direct view. By using a basic white disc in the top cover of the luminaire a new lighting ambience is created, like the effect of a candle.

Total Light Output Ratio > 50 %

Upward Light Ratio < 10 %

Available for:

**Indirect symmetric**

Rotationally symmetric distribution can be obtained and spacing can be much improved with a high-performance 3D curved aluminium top reflector.

Total Light Output Ratio > 55 %

Upward Light Ratio < 5 %

Available for:

**Indirect bi-directional**

Complex aluminium shapes used as the top reflector can create unique light distribution. The bi-directional top reflector projects the light on both sides, thus optimising spacing.

Total Light Output Ratio > 50 %

Upward Light Ratio < 5 %

Available for:

**Indirect asymmetric**

The asymmetric aluminium top reflector projects the light to the front, delivering ideal performance for wider streets.

Total Light Output Ratio > 55 %

Upward Light Ratio < 10 %

Available for:

**Road reflector**

Our famous CT-POT reflector is ideal for many applications, especially streets with traffic. It is suitable for use with all compact burner lamps, providing excellent spacing. This solution is used only in the Street version.

Total Light Output Ratio > 65 %

Upward Light Ratio < 0 %

Available for:

CitySpirit LED – setting street image with LED solutions

The modularity of the existing CitySpirit series and the latest LED developments have been united in the new CitySpirit luminaires. This means that six of the eight designs are also available in an LED version, so that lighting solutions that are even more energy-efficient can be realised whilst retaining image and functionality.

Almost all typical applications can be realised with these, including options such as dimming and Constant Light Output (CLO). The long service life of the LED module and its simple modular replacement make this design highly 'future proof' thanks to even more energy saving options with improved LEDs. Various indirect reflection optics disseminate the standard warm white or cool white light in the applicable manner.

CitySpirit wall mounted	
Indirect LED version	
Type	BWS464
Light source	22 x SMD LED-HP
Light colour	Warm white 3,000 K (WW) Neutral white 4,000 K (NW)
Power consumption	System 30 W (typical)
Inrush current	20 A / 40 µs
Driver	220-240 V / 50-60 Hz
Optical element	Top reflector; indirect (T-IO) Top reflector; indirect asymmetrical (TA-IO) Top reflector; indirect bi-directional (TB-IO LED) Top reflector; indirect symmetrical (TS-IO)
Optical cover	Transparent bowl/cover (TB)
Controls	Compatible with full line of Philips 1-10 V controllers
Options	Lumistep (pre-programmed dimming) 1-10 V input (dimming via external control) Photocell: Minicell (P3) Pre-wired mains connection cable (for 60P version): 4.5 m (C4K5), 6 m (C6K)

CitySpirit wall mounted BWS464 urban lighting luminaire LED version

Accessories

CitySpirit wall mounted BWS464 urban lighting luminaire with indirect optic and GDS460 light trespass

Product ID	EOC
GDS460 LT	727066 00

Material	Housing: high-pressure, die-cast aluminium, non-corrosive Pole mount: die-cast aluminium Bowl and skirt: polycarbonate, translucent UV-stabilised Top cover: ABS with heat shield Reflectors: anodised aluminium, brightened 99.99%
Colour	Canopy: ultra dark grey, approx RAL7043 (GR) Other RAL colours available on request
Installation	Post top mounting: axial entry Ø 60 (60P) or 76 mm (76P) Operating temperature: -20°C < T _a < 35°C Recommended mounting height: 3.5 to 5 m
Lifetime	50,000 hours (70% lumen maintenance)
Remarks	CRI 80 Constant Light Output
Main applications	Urban, residential and pedestrian areas, promenades

CitySpirit Street

CitySpirit Street & Street Colour – enliven your streets

CitySpirit Street completes the CitySpirit range by combining a distinctive design with high quality street lighting. This combination makes it suitable for city centres, squares, boulevards and of course streets.

CitySpirit Street Colour is a high performance street lighting luminaire and an upgrade to the successful CitySpirit Street CDS480. It combines a high performance reflector for efficient street lighting with a translucent diffusing housing that creates a friendly, colourful lighting effect. CitySpirit Street Colour is available in two versions. The Ambient Light Effect version provides soft guidance thanks to the perforated optic, while the LED models – with 8 static presets, selected using a switch – can be used to create an attractive colourful ambience that brings the street to life.

CPS200

CPS200 – functional and efficient

CPS200 is a functional, efficient post top luminaire for residential and other area lighting applications. It accommodates a range of lamp types and offers a choice of bowls – low glare prismatic for ovoid lamps and structured for tubular and compact fluorescent lamps – for optimum optical efficiency.

www.philips.co.uk/lighting

CPS200	
Type	CPS200 (bowl) EPS200 (control gear unit)
Light source	HID: 1 × SON / E27 / 70 W 1 × SON / E40 / 100, 150 W
Lamp included	No
Lamp holder	Horizontal position (LH) Vertical position (LV)
Gear	Electromagnetic (low loss), 240 V / 50 Hz: Inductive, parallel compensated (IC) Electronic, 220 - 240 V / 50 - 60 Hz: High Frequency Performer (HFP) High Frequency Regulator (HFR) Empty (E) (without gear)
Optical cover	Prismatic bowl (HP)
Ignitor	Semi-parallel (SP)

Options	Photocell: NEMA socket (P1)
Materials and finishing	Bowls: polycarbonate, impact-resistant Diffuser: steel, white-lacquered (HP versions) Cover: Iuran (ASA) with 3 quick-release stainless-steel clips Post socket: die-cast aluminium, non-corrosive
Installation	Post top mounting: axial entry Ø 60 / 68 / 76 mm (60P / 68P / 76P) Recommended mounting height: 3.5 - 4 m Bowl can be installed in advance of gear unit
Accessories	Spigot adaptor
Main applications	Shopping malls, residential areas, city centres and squares

CPS200

A complete configuration consists of:
control gear unit (EPS) and bowl (CPS)

CPS200 urban lighting luminaire with
prismatic bowl (HP version)

CityZen

CityZen – calm presence

CityZen is a residential outdoor luminaire. Its double-texture bowl ensures a good balance between optical performance and visual appearance. The extremely efficient optical system allows wider spacing between poles. Energy consumption is low thanks to the fluorescent PL-L Polar lamp. The vandal-resistant CityZen is available in a wide choice of colours.

Easy step by step installation and maintenance. No tools are required

Urbana

Urbana – the beauty of versatility

Comprising eight different decorative models, the Urbana EPS300 range can be deployed in a wide variety of urban applications. At the same time, a distinct family design aesthetic is maintained thanks to the use of a single standard pole mount across the entire range. Whatever the application, Urbana's combination of excellent lighting performance and attractive day-time and night-time appearance adds to the ambience of the surroundings. The luminaires with Forest, Arctic and Tropic top covers address the issue of obtrusive light by means of dedicated bowls with top covers that prevent upward emission of light. The light pollution bowl Luner features a black coating on its upper hemisphere, to prevent upward light distribution. Both the opal Polar and clear Cristal bowls offer a choice of soft, diffuse lighting and bright, direct illumination.

www.philips.co.uk/lighting

Clear conical bowl cover with reflector (PCC-R)

Easy to instal and maintain

As each Urbana luminaire features the same pole mount, installation is the same every time. There is a simple twist-and-click bayonet connection for the louvres, which means that no tools are needed for lamp replacement, and the bowl itself also has a bayonet connection to the pole mount.

Reflectors

A choice of louvres - direct and indirect - are available for use with the clear bowls to ensure the desired light distribution and effect.

Alternately, a heat shield can be chosen when a reflector is not needed.

Bayonet connection

A bayonet connection for the bowls and top hats allows easy installation and tool-less lamp replacement

For easy installation and maintenance reasons, the reflector has a bayonet connection

Heat shield

Bi-directional

Milewide

Milewide – pure and contemporary

Milewide is a pure, contemporary street lighting luminaire designed in collaboration with Knud Holscher (Denmark).

Blending simple design and high performance, the Milewide family encompasses three sizes: Mini Milewide, Milewide and Mega Milewide.

The new Mini Milewide has been specially designed to integrate the latest CosmoPolis technology. This elegant luminaire offers outstanding lighting performance thanks to the synergy between efficient CosmoPolis light sources, a new electronic ballast and the new, dedicated CosmoR optical system.

The Milewide and Mega Milewide deliver high optical performance thanks to the adjustable road lighting reflector and inclination angle and have been optimised for different street configurations. To create complete solutions for today's cities, the Milewide range has its own dedicated line of columns.

www.philips.co.uk/lighting

Mini Milewide SRS419, Milewide SRS421, Mega Milewide SRS427

Milewide masts and brackets

The dedicated Milewide masts and brackets were developed to suit all three versions of the luminaire (Mini, standard and Mega), depending on the application. With heights up to 12 m, the Milewide mast is tubular in section 150 or 180 mm, either in anodised aluminium, or painted Philips silver grey. The luminaire is fixed either on a mini bracket directly onto the column, or on a 1000 mm bracket with retaining cable.

The pure design of these masts and brackets harmonises with the generous curves of the Milewide luminaires, creating a delicate ensemble.

Easy access by opening canopy

CitySoul

CitySoul – create identity

CitySoul is a family of modular street lighting luminaires, featuring state of the art lamp and gear technologies, and offering outstanding optical performance.

CitySoul's classic design merges well with today's urban environment. The simple, flat, ellipsoidal form of the luminaire creates an elegant light point.

CitySoul is highly versatile. Suitable for side entry, suspended or post top installation, and with its adjustable beam and light trespass accessories, it fits every application.

Incorporating highly energy efficient technologies, CitySoul has been designated as a Philips 'Green Flagship'.

CitySoul comes in two sizes, along with a complete range of dedicated masts and brackets.

www.philips.co.uk/lighting

CitySoul CGP430, mini version

CitySoul CGP431, standard version

CitySoul offers maximum flexibility in design and light applications in urban environments. Its stylish look conceals a rugged, high strength construction with a stiff enclosure that guarantees protection for the optic, lamp and gear, resulting in a total IP66 rating. The outer shell of the luminaire is made of die-cast aluminium, and the inner components are made of glass-reinforced polypropylene.

Optical performance

The patented CT-POT optic is suitable for all mounting heights, and the adjustable lamp holder allows perfect aiming of the beam, regardless of where the luminaire is installed. A polycarbonate bowl is available for greater shock resistance.

Versatile range

CitySoul is available for side entry, suspended or post-top installation and offers a choice of elegant brackets. With its adjustable beam and light trespass accessories, it fits every application.

Post top mounting

Traditional post top mounting is possible on a pole of Ø 60 or 76 mm. CitySoul expands this capability with another version, which includes a hinge that can be tilted in 5° steps for the perfect angle.

Side entry

This dedicated spigot enables side entry mounting on Ø 42 to 60 mm brackets.

Suspended

A dedicated canopy is available for suspended installations.

Opening the luminaire

Direct access to the lamp

Accessing the gear tray

Light only where it is needed

Ahead of upcoming regulations, CitySoul offers light distributions that illuminate the streets and not the sky. CitySoul enables lighting schemes that truly offer zero candelas above the horizon.

CosmoPolis

The MASTER CosmoPolis lamp and its electronic gear make it possible to increase spacing by up to +15%, while reducing CO₂ emissions by 40%. Assembled without glue, with all plastic parts coded for traceability, CitySoul is easily recycled, complying with RoHS and ready for WEEE.

CosmoPolis system in dedicated
CosmoR optic

Future proof

With CitySoul, maintenance is fast and easy. The complete gear platform can be changed in an instant, and the patented knife-connector ensures all maintenance operations are safe for the operator.

Self cleaning

With the CitySoul range, Philips is introducing a new coating that actively expels dust and pollution from the glass: DynaClean. This 'self-cleaning' coating reduces the decline in lumen output over time due to dust and dirt on the glass.

It reduces the need for maintenance, thus enabling maximum use to be made of the system energy of a luminaire over its lifetime.

In installation design, DynaClean increases the maintenance factor by 7%.

motorway, without DynaClean

CitySoul masts and brackets

Providing light is not enough. Cities are now looking for solutions that will contribute to the identity of the city, not just light points. For CitySoul, we designed several ranges of masts and brackets to fit every style, with elegance. Modern or classical, single or twin bracket, with the option for a pedestrian mini luminaire, CitySoul is versatile.

Available in heights from 4 to 10 m, CitySoul solutions are available in standard Philips ultra dark grey, while other colours and finishes are available upon request.

CitySoul post-top fixation on cylindric masts creates sober solutions. This type of installation is ideal for residential areas, industrial or shopping districts.

Flip bracket

The straight design of the Flip bracket creates a simple and pure solution. Its classical shape is suitable for boulevards or ring roads.

The slim shape of the Flip bracket demonstrates dynamism. These solutions are primarily designed for ring roads and suburban access routes where daylight appearance is important.

Jump bracket

The Jump bracket expands the horizon and recreates a tree line. It is best applied in boulevards or commercial areas.

Morph bracket

Generous and organic, the Morph bracket is a design statement. It will suit centre boulevards as well as parking zones.

Horizontal bracket

Straightforward and unobtrusive, the Horizontal bracket can create rhythm within a city. This solution performs best on ring roads and suburban access routes.

Structural bracket

Sometimes function contributes to form. The cable that compensates for the angle of the Structural bracket creates a link to modern steel architectures. The Structural bracket can be applied in streets and roads to modern districts.

City of Petersbach in France, CitySoul on Jump bracket

Natural bracket

The angled Natural bracket has been designed to blend in in streets where there are trees, following the natural direction of the branches. It is ideal in access roads to residential areas or exit roads.

CityVision

CityVision – expand your horizons

CityVision is a range of luminaires for use in residential areas. Their stylish looks conceal a rugged, high-strength construction, which is suitable for side entry and post top mounting at heights of up to 8 metres. A range of light sources provide warm to cool light, and direct to diffuse light. CityVision offers a choice of two decorative upper domes – translucent or painted – and two bowl shapes. There is also a version with an all-aluminium canopy and the choice of a flat glass for increased visual comfort (CPS500). In this model, the optical compartment has been designed to accommodate the CT-POT reflector, which is renowned for its versatility in application and performance. The flat glass reinforces the simplicity of the luminaire design and controls glare to the level of zero candelas above the horizon in compliance with the latest European norms on light nuisance.

NightWatch

NightWatch – Brilliant functionality

NightWatch is a bollard luminaire designed to supply a high lighting level despite the low height of the light point. The simple, robust and functional design is based on a dedicated optical system, providing a symmetrical downward light distribution for optimum guidance.

Design: Marianne Tuxen, Industrial Design

Lighting engineering: Jens Gudum, Hansen & Henneberg

www.philips.co.uk/lighting

Nightwatch

Type	HGP433
Light source	HID: 1 x MASTERColour CDM-T / G12 / 35, 70 W
Lamp included	No
Gear	Electro magnetic (low loss), 240 V / 50 Hz
Ignitor	Semi-parallel, self-stopping (ST)
Materials and finishing	Housing: polycarbonate, UV-stabilised Canopy: die-cast aluminium Mast: extruded aluminium Canopy and mast: weather-resistant powder-varnished (texture)

Colour	Akzo Nobel Noir 200 Sable
Installation	Fixation onto base or firm foundation Adjustable console included
Remarks	The luminaire is supplied as a complete assembly (excluding lamp) in one box
Main applications	Urban, pedestrian and residential areas, promenades, parks, gardens, city centres, car parks

Dedicated optical system offering optimised guidance lighting

Smart Bollard LED

Smart Bollard LED – contemporary city beautification

Smart Bollard LED is an outdoor luminaire for general illumination, which delivers a choice of cool-white or warm-white light. Three LUXEON® super-bright LEDs, aided by customised glare reducing optics, provide lighting levels similar to conventional sources, while only consuming 5 W. The extremely long lifetime of LEDs and the durable aluminium housing with IP65 protection ensure maintenance-free operation over the entire life of the product.

With its smart, elegant design, Smart Bollard LED is suited to a wide range of architectural styles. The integrated wide-voltage driver and provided cabling makes installation easy and safe. Smart Bollard LED is available in two heights of 400 mm (tall) and 200 mm (short).

www.philips.co.uk/lighting

Smart Bollard LED

Type	BCP450 (short version) BCP455 (large version)
Light source	3 x LUXEON® LED-HP, 140°, 350 am 3 x LUXEON® LED-HP, 110°, 350 am
Light colour	Warm white, 3085 - 3295 K Cool white, 5650 - 6300 K
Main voltage	100-240 V
Power consumption	3 W (LED only)
Optic	Conical chrome-plated ABS reflector
Optical cover	Cylindrical tempered glass cover
Driver	Integrated LED driver

Materials and finishing	Housing: high-pressure die-cast aluminium, non-corrosive, powder coated Glass: thermally hardened, 1.5 mm thick Reflectors: chrome plated ABS
Colour	Grey REAL 9006 (GER.)
Installation	Floor mounting PG16 cable gland at base for concealed wiring after installation Delivered with mains supply cable of 1 meter Operating temperature: $-20^{\circ}\text{C} < T_a < 40^{\circ}\text{C}$
Lifetime	50,000 hours (70% lumen maintenance at $T_a = 25^{\circ}\text{C}$)
Main applications	Parks, gardens, shopping areas

Verona

Verona – variety of effects

Verona is a modular, vandal-resistant bollard range that allows the creation of a variety of lighting atmospheres. With a choice of direct light or indirect, soft and filtered lighting effects, Verona offers distinction and demarcation by day, together with improved guidance at night. The posts are available in three different heights and with four different tops: open, cone, lamella and louvre. Furthermore, a light eye can be added to each of the tops for additional guidance.

Customised solutions

Turning creative ideas into reality

Light is, above all, an opportunity to create space, manage moods and improve the quality of life. An opportunity that is as broad as your imagination.

The ideal solution for any lighting application has to be based upon balanced consideration of numerous factors – the materials being illuminated, the most appropriate lamp technology, the aesthetics of the setting, environmental constraints, etc.

Therefore, at Philips we have dedicated application and product development specialists who – working together with our customers – co-create tailor-made lighting solutions. In this way, we enable architects and lighting designers to turn their creative ideas into reality.

The next pages show only a small selection of this creative idea that became reality.

Project: Plaza de Indautxu, Bilbao, Spain

Architect: Ander Marquet Ryan, JAAM architecture partnership

Multipole

Multipole is ideal for custom-made lighting solutions.

One Multipole product fulfils the multiple application requirements that arise in everyday city life.

Multipole is a multi-functional lighting concept that integrates state-of-the-art technologies, such as LEDs, and intelligent, dynamic lighting control systems. This modular and fully integrated lighting system offers – within one neutrally designed pole – five different lighting modules:

- Top Light provides dynamic and coloured guidance light
- Road Light provides dimmable and uniform functional light
- Pedestrian Light provides sensor-activated and localised light
- Reading Light provides personal and focused interactive light
- Foot Light provides dynamic and coloured decorative light

Bellevue

The line of the lantern was designed to represent a mast blooming.
This fluidity and simplicity of shape makes the ensemble timeless.

Body: pure cast aluminium.

IP: IP65 (optic), IP23 (gear)

Lamps: SON-T 100 W, 150 W, 250 W

CDO-TT: 70 W, 150 W, 250 W

CosmoPolis CPO-T: 90 W, 140 W

Other lamps and finishes available on request.

Carré Senart, France

St Herbain, France

LightTube

The LightTube integrates a light-conductive film for HID or LED light sources with intelligent, dynamic lighting control systems.

These tailor-made luminaires are developed around a vast choice of tube diameters, heights, materials and finishes.

Courtrai, Belgium

Montpellier, France

St Rambert, France

Project Luminaires

Nordic design for urban lighting

Over the years Philips has developed a close working relationship with Danish architects. The Asklepios and Aether luminaires are all products of this co-operation.

The objective was for us to share our vision of urban lighting and to generate unique lighting concepts that will enable us to fulfil our mission to improve the quality of life in the city.

The Asklepios and Aether luminaires have been developed in collaboration with the architects office Schmidt, Hammer & Lassen K/S. These two related families comprise a 3.5-metre-high street light and a bollard, which are made of anodized extruded aluminium and are suitable for use with energy-saving compact fluorescent lamps.

European flavour

No two cities are the same, so every city has different requirements in terms of style of street lighting and pedestrian luminaires.

Arken is ideal as a pedestrian partner to complement street lighting. Its simple conical shape, integrated gear, wide choice of lamps and combination of diffuser and indirect lighting ensure it will tie in seamlessly with your project. Helios, with its contemporary design and QL lamps is a landmark element for pedestrian zones in the city centre. With its unique design, Triangel combines efficient street lighting with guidance lighting above the housing.

Asklepios

Asklepios – urban minimalism

Asklepios is a range of column and bollard luminaires with a contemporary square-cut design. The clean lines bring modern minimalist aesthetics to the urban environment, creating soft directional effects and a pleasant ambience.

Design: Schmidt, Hammer & Lassen

Triangel

Triangel – lighting with distinction

Triangel is an urban lighting luminaire that combines a memorable design with a robust, durable construction. Featuring a highly distinctive lit triangle perpendicular to the housing for visual guidance and secondary lighting, as well as high efficiency reflectors, the vandal resistant Triangel is suited to a variety of different applications.

Triangel offers a wide range of mounting options, at a recommended mounting height of 3 to 5 metres, as well as maintenance friendly access via a hinged glass cover – no tools required.

Lighting the road ahead

With over one hundred years of experience and expertise in the field of road and tunnel lighting, we are in an ideal position to analyse market trends and come up with appropriate solutions.

Our business is to apply technological innovation to the design and development of the road and tunnel lighting products of the future, in response to the wishes and needs of our customers.

All Philips luminaires are optimised in terms of wattage, in order to provide precisely the right level of light in the right place at the right time. Compact, aesthetically pleasing luminaires reflect the increasing importance being attached to the daytime appearance of light points.

The growing popularity of high-quality white light sources is being met by a range of special lamps (CosmoPolis system, CDM-T, CDO-TT, PL-T), and optics are being adapted to the new lamps, further improving performance. Better materials and IP66 are contributing to the durability of installations, while the increasing use of longlasting lamps, electronic gear and telemanagement is optimising running costs.

The best possible cost/light quality ratio

In view of the constant pressure on city maintenance budgets, it makes sense to opt for luminaires that are easy to instal and maintain. We recommend a predictive maintenance policy, which argues in favour of the installation of long-life lamps and luminaires.

Respect for the environment

Care for the environment means using lamps that are free of heavy metals and luminaires that are made without glue from recyclable components and equipped with reflectors that reduce light pollution whilst maximising the efficiency of the lighting installation. All our systems are produced in factories which are ISO 14001-certified.

The Mini-Cosmo LED platform

Mini Iridium LED

Mini Koffer²

Mini Modena

The Mini-Cosmo LED platform – lamp holders for the future.

The MASTER Cosmopolis lamp has now become a household name in the world of outdoor lighting. Many luminaires are equipped with this in combination with the well-known R60 optics.

From the current efforts to achieve further reductions in energy consumption, CO₂ emissions and light pollution and in 'perfect design' around the CosmoPolis system, three new mini luminaires will be available from 2009: Mini Modena, Mini Koffer² and Mini Iridium.

Optic

In addition, a new revolutionary optic has been designed for the superior diffusion of the attractive white CosmoPolis light in these super-compact luminaires, the patented VX2 optic.

This makes it possible to work with much greater post spacings and fitting heights whilst maintaining the required light diffusion.

VX2 optic

The most well-known of these three luminaires – the mini Iridium – will be the first to be available in 2009 in a 'future-proof' LED design.

BGS451 (LED) and SGS451 (HID)

SGP060 (HID)

SGP680 (HID)

Modena

Modena – beauty and efficiency

Modena is a road lighting luminaire that combines elegance and excellent lighting performance. Its fluid, rounded form gives it a strong and distinctive visual character. Modena offers a wide choice of optical, electrical and mechanical options to satisfy all road applications. It allows considerable energy savings (dimming with standard dimming devices or stand-alone Chronosense system; electronic ballast or telemanagement system) and is easy to install and maintain.

The Modena family accommodates CosmoPolis white light technology and comes in three sizes – for mounting heights from 3.5 to 12 metres.

Each Modena luminaire is fully recyclable; only the lamp and ballast have to be recycled separately.

Optical cover	Glass bowl (GB) and with DynaClean coating (GBD) Flat glass (FG) and with DynaClean coating (FGD)
Cable gland	PG 13.5 mm
Options	Light regulation: Lumistep LS-6, LS-8 and LS-10 for 60 and 90 W versions Photocell: minicell 50lx (P3), minicell 30lx (P3-30) Pre-equipped cables without plug: cable lengths of: 9 m (C9000), 12 m (C12K), 14 m (C14K)
Materials and finishing	Housing: high-pressure die-cast aluminium, non-corrosive Glass: thermally hardened, 6 mm thick Gasket: silicone rubber; heat-resistant Reflectors: anodised aluminium, brightened 99.99%
Colour	Canopy: painted grey satin metalised, approx RAL9006 (GR) Frame: painted grey satin metalised, approx RAL9006 (GR) Spigot: painted grey satin metalised, approx RAL9006 (GR) Other RAL or AKZO Futura colours available on request for all parts (AL) or only the canopy

Installation	Fix spigot for side entry mounting: entry Ø 34-48 mm Operating temperature: - 20°C < T _a < 35°C (version 90 W max 25°C) Recommended mounting height: 3.5 to 6 m and 6 to 9 m Standard tilt angle post top: 10° standard Adjustable tilt angle: internal optic adjustment to -10, -5 and 0° Adjustable light distribution: 2 positions (VX2-optic version) and 7 positions (OC-optic version) Max SCx value by side: 0.044 m ²
Maintenance	From below by opening the housing with a single quick-release clip all supported by a retention cable Open optic for easy lamp replacement and quick lamp position and internal optic tilt adjustment Hinged front glass with quick-release clips for replacement Multiblock for easy cabling and electrical connection
Accessories	Dedicated mast and wall brackets available for different mounting possibilities Side entry reducer from 60 to 48 mm
Main applications	Residential streets, pedestrian and cycle paths and minor roads

Iridium

Iridium – lighting the road ahead

Iridium is a family of road lighting luminaires designed for three main applications – residential areas and minor roads, major roads, and motorways. Its modularity allows the integration of optical or electronic components in order to adapt to the changing demands of road lighting, e.g. the growing demand for white light and controls. Iridium ensures low cost of ownership thanks to its superior optics, dimming and telemanagement capability, and ease of installation and maintenance.

The Iridium luminaire family includes CosmoPolis and LED-enabled versions. It comes in four different sizes – for mounting heights from 3.5 to 12 metres – and is suitable for side entry and post top mounting. A full range of brackets ensures visual consistency between the column and the gently rounded luminaire, making Iridium a total solution.

Each Iridium luminaire is fully recyclable; only the lamp and ballast have to be recycled separately.

Iridium

Iridium – the evolution of road lighting

The never-ending evolution

Iridium provides the clearest illustration yet of the shift from the original purpose of “the right light in the right place” toward a “Green City light solution”. Thanks to its worldwide design acceptance and its modularity (based on a wide range of sizes, materials and options), Iridium enables outdoor lighting authorities to introduce the most advanced green innovations while ensuring the best possible Total Cost of Ownership.

Sustainability

Iridium set the pace in the introduction of CosmoPolis, the most efficient white-light combination of lamps, electronic ballast and innovative optics for street lighting. Cities all over the world are replacing thousands of old, inefficient, low-quality lighting installations with Iridium and CosmoPolis.

Iridium's electronic ballast and dimming capability – with any type of outdoor lamp – also rationalises energy consumption.

Iridium helps protect the environment and the quality of life. Thanks to its variety of optics, Iridium can cover all configurations – from a highway to a pavement – and mounting heights, with perfect control and strict adherence to the latest lighting standards.

Maintenance

Iridium provides yet another example of Philips' commitment to creating maintenance-friendly lighting solutions – not only with its mechanical operations, fully recyclable glass, aluminium and plastic materials, tool-less access, absence of glue, and plug-and-socket connectors, but also with its electronic ballast and Starsense, the highly advanced Telemanagement solution. With Starsense, each individual light point can be switched on or off or dimmed as required, and automatic monitoring provides continuous feedback on the status of each lamp. The rationalisation and drastic simplification of lighting maintenance procedures reduces the operating cost of the system as a whole.

South Tyneside, England 25,000 lighting points with Iridium and CosmoPolis

Mini Iridium LED

Mini Iridium LED	
Type	BGS451
Light source	16, 24 x LED-HP, 20, 31 W
Light colour	Warm white (WW)
Driver (integrated)	Driver 350 mA with Constant Light Output function (CLO)
Optic	Narrow street (NSO) Medium street (MSO)
Optical cover	Polycarbonate cover
Cable gland	PG 13.5 mm
Options	Light regulation: Lumistep LS-6, LS-8 and LS-10 Photocell: minicell 70lx (P3), minicell 30lx (P3-30) Pre-equipped cables without plug: cable lengths of: 9 m (C9K), 12 m (C12K), 14 m (C14K)
Materials and finishing	Housing: high-pressure die-cast aluminium, non-corrosive Gasket: silicone rubber; heat-resistant Cover: polycarbonate, frosted with clear lenses Heat sink (internal): high-pressure die-cast aluminium, non-corrosive
Colour	Canopy: brilliant grey, approx RAL7043 (GR) Frame and spigot: aluminium, unpainted sandblasted

Installation	Flexifit spigot for post top mounting: axial entry Ø 60 - 76 mm at 10° tilt or side entry mounting: lateral entry Ø 34 - 48 mm Operating temperature: - 20°C < T _a < 35°C (version 90 W max 25°C) Recommended mounting height: 3.5 to 6 m and 6 to 9 m Standard tilt angle post top: 10° standard Max SCx value by side: 0.032 m² (GB/GBD versions), 0.032 m² (FG/FGD versions)
Maintenance	From below by opening the housing with a single quick-release clip all supported by a retention cable Multiblock for easy cabling and electrical connection Simple LED module and driver replacement Hinged front glass with quick-release clips for replacement
Accessories	Wall mounting bracket Dedicated mast and wall brackets available for different mounting possibilities Side entry reductor from 60 to 48 mm
Main applications	Residential streets, pedestrian and cycle paths and minor roads

Koffer²

Koffer² – economical system

Koffer² is an archetypal modern road lighting luminaire, which meets the needs of today's road users and operators. It is easy to install and maintain, delivers optimum optical performance and is future-proof. With its rectangular shape, Koffer² offers an alternative to today's design trend towards rounded luminaires.

Total cost over lifetime was the main consideration during the development phase. In addition to sound construction and low maintenance costs, specific attention was also devoted to optical performance in order to enable optimum spacing and energy efficiency.

With the optional mast and bracket concept, the Koffer² design is highly versatile: the two sizes can be integrated into futuristic concepts in modern urban environments or in more traditional lighting designs. The design of Koffer² is a logical progression from the original Koffer design which has sold over 3 million units throughout Europe. Koffer² is, therefore, the ideal luminaire with which to upgrade or extend existing Koffer installations.

www.philips.co.uk/lighting

Mini Koffer² SGP060

Koffer² SGP100

Koffer² SGP070

Koffer² – the safety specialist

Different types of roads require different lighting solutions in respect of luminous intensity and light distribution. Koffer² offers application-specific optics, e.g. for cycle paths and footpaths, pedestrian crossings and railway stations. Specific shapes of lamp also require dedicated optics for optimum performance.

Koffer² offers seven different optics for different applications and lamps. With some optics, the light distribution can be adapted to the installation layout by adjusting the lamp position.

CosmoPolis: the foundation of change

Combining maximum efficiency and brilliant light quality, CosmoPolis is set to become the lamp technology of the future. It is the ideal lamp for Koffer². In renovation projects, it enables the installed load to be halved compared with high-pressure mercury lamps. In new installations, energy consumption can even be reduced to a third compared with existing installations.

Improved flexi-fit mounting spigot

Koffer² comes with an improved flexi-fit mounting spigot, which guarantees a smooth and pure design – regardless of the mast diameter.

For post-top installations, 76 mm:
the opening is fully open and the round and moon-shaped baffles are pivoted inside the luminaire

Post-top installation, 60 mm:
the round baffle is pivoted inside the luminaire. The moon-shaped baffle closes the rest of the opening and the surface of the luminaire is totally flush

Side-entry installation:
both baffles close the opening and the surface is totally flush

Innovation – self-cleaning glass covers

With Koffer², Philips is introducing another genuine innovation – DynaClean, a new coating that helps to maintain lighting levels.

As an optional extra, the flat glass can be coated with a photo-catalytic and hydrophilic coating. This is activated by the UV rays from the lamp and the sun, which then destroy the dirt particles. This 'self-cleaning' coating slows the decline in lumen output over time. DynaClean increases the maintenance factor by 7 points. This leads to a potential spacing gain up to 9%.

Flat glass after 1.5 years near a motorway, with DynaClean

Flat glass after 1.5 years near a motorway, without DynaClean

Maintenance

Maintenance is tool less. The frame opens downwards and all electrical components are directly visible.

Toolless opening of the luminaire

Quickly replace glass bowls

Quickly replace the gear-tray

Replace lamps without tools

Best environmental choice

The CosmoPolis lamp and its electronic gear make it possible to increase spacings by up to +15%, while enabling a 40% reduction in CO₂ emissions. Assembled without glue, with all plastic parts coded for traceability, Koffer² is easily recycled, complying with RoHS and ready for WEEE.

Compared to SON-T the spacing is increased by 15% and CO₂ emissions reduced by 40%.

TrafficVision

TrafficVision – exactly the right light

TrafficVision SGS305/306 is a road lighting luminaire that is fully adjustable to deliver light precisely where it is needed, in the quantity needed, for safe and comfortable driving. Dedicated faceted optics optimise beam control and maximise light output, while graduated adjustment of the reflector is possible for accurate direction of the beam. TrafficVision's modular concept ensures easy installation and fast, safe maintenance.

TrafficVision is suitable for post top or side entry mounting.

Selenium

Selenium – timeless design

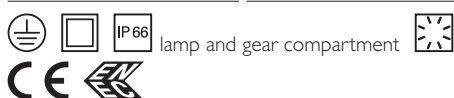

Selenium SGP340 is an efficient, ergonomic road lighting luminaire. Its simple, rounded form reduces its daytime visual impact, allowing it to integrate into any kind of environment. Selenium incorporates the renowned T-POT reflector for excellent optical performance. Energy savings are possible by means of dimming with a switch or stand-alone Chronosense system (without pilot cable).

Selenium is suitable for side entry or post top mounting, with a choice of three tilt angles for optimal installation (0, 5, 15°).

SGS203

SGS203 – precision lighting

SGS203 is a modular luminaire in contemporary style for safe and comfortable driving, and for area illumination, with low energy and maintenance costs. It offers a choice of canopies and a bowl, or flat glass for minimal-glare. Dedicated optics optimise beam control and maximise light output. Five different reflector positions allow precise control of beam direction. Energy savings are possible, for instance with the Chronosense dimming system (no pilot cable required).

SGS203 is suitable for side entry or post top mounting.

AluRoad

AluRoad – street lighting made easy

AluRoad is a robust, compact road lighting luminaire that combines an attractive design with very good lighting performance. It is extremely easy to install and maintain, and offers a wide choice of energy efficient lamps.

The visual impression created by the aluminium canopy and polycarbonate bowl makes AluRoad compatible with existing road lighting applications.

AluRoad is available in two sizes – 450 and 560 mm, with corresponding adjustable reflectors and is suitable for side entry and post top mounting.

AluRoad SRP221 road lighting luminaire (small)

AluRoad SRP222 road lighting luminaire (large)

	AluRoad
Type	SRP221
Light source	HID: 1 x MASTER SON-T PIA Plus / E27 / 50, 70 W 1 x MASTER CityWhite CDO-TT / E27 / 70 W
Lamp included	Yes (K)
Mains voltage	240 V
Gear	Electro magnetic (conventional), 240 V / 50 Hz
Optic	One piece deep drawn aluminium reflector (T-POT)
Optical cover	Polycarbonate bowl
Ignitor	Semi-parallel (SP) Semi-parallel, self-stopping (ST)
Options	Photocell: Micro Minicell (P2)
Materials and finishing	Canopy: die-cast aluminium Reflector: high purity aluminium Optical covers: polycarbonate Closing clip: stainless steel
Colour	Grey, RAL 7035 Other RAL colours available on request

Installation	Side entry mounting: lateral entry Ø 48 / 60 mm (48/60) (or Ø 34 / 42 mm with reducing piece) Integrated spigot into luminaire Post top mounting: adaptors for Ø 60 / 76 mm Ambient temperature outdoor: -20°C < T _a < 35°C Recommended mounting height: 3.5 - 10 m Standard tilt angle post top: 5° Adjustable light distribution: 3 positions Max windage area: 0.022 m² Max SCx values by side: 0.065 m²
Maintenance	Lamp accessible by opening the bowl with a single quick-release clip, replacement of the gear tray requires only one screw driver and the bowl replacement is easy and without any tools
Accessories	Post top adaptor ZRP220 AD60/60 A5 and ZRP220 AD76/60 A5, reducing piece for side entry spigot ZRP220 AD34/42
Main applications	Secondary roads, industrial and residential areas, roundabouts

Streetfighter

Streetfighter – contemporary style

Streetfighter is a versatile road lighting luminaire. It offers modern styling and quality lighting for safe and comfortable driving, and for area illumination, with low investment and maintenance costs. The optical system has been designed to deliver good beam control and light output.

Streetfighter provides optimal illuminance and good uniformity when the mounting height approximately equals the road width and the mast spacing is approximately 3.5 times the road width. It is suitable for post top and side entry mounting; a wall mounting bracket is also available.

Residium

Residium – innovative by design

Residium is a range of economical, easy-to-service, general purpose road lighting luminaires for PL-L and SOX lamps, offering low energy and maintenance costs. These luminaires have a balanced design and incorporate innovative mirror optics for optimum light distribution and minimal light pollution.

Residium is suitable for post top and side entry mounting.

FGS103/104/105

FGS103/104/105 – economical and service-friendly

FGS103/104/105 are general purpose road lighting luminaires, available in three different lengths. They are economical and service-friendly, with low energy and maintenance costs. A UV-resistant polycarbonate refractor bowl ensures efficient, uniform lighting.

FGS103/104/105 are suitable for side entry or post top mounting.

SRS201

SRS201 – slender solution

SRS201 is a slender yet robust, economical road lighting luminaire for low pressure sodium lamps. It comes in three different sizes, all with a refractor bowl for optimal light distribution. Energy efficiency is assured.

SRS201 is designed for side entry mounting.

Mont Blanc tunnel, France-Italy

What you ought to know about tunnel lighting

For smooth traffic flow, in bright daylight and total darkness, and in all weather conditions, tunnel lighting should give drivers the same sense of safety and comfort in the tunnel as on the open approach road. This means that drivers should have adequate visual information concerning the behaviour of other road users, the course of the road ahead and the presence of any obstacles in the tunnel entrance, to be able to react in time within a safe stopping distance (SSD). Guidelines for tunnel lighting according to CIE 88 can be found in document CIE 88-1990 "Guide for the lighting of road tunnels and underpasses".

www.philips.co.uk/lighting

When to light by day

Being adapted to the relatively high luminance outside, drivers will not be able to see details in a long tunnel, which appears on approach as a 'black hole'. For a short tunnel details may be visible in negative contrast when the tunnel appears as a dark frame around a bright background.

The decision whether a tunnel or underpass has to be lit during the day depends on the length of the tunnel, the visibility of the exit, the amount of natural light in the tunnel and the traffic density.

A guideline in this decision is offered by the CIE.

How to light by day

Good tunnel lighting takes care of good visibility conditions for the road users; this requires lighting levels that are matched with the adaptation level of the users' eyes.

As this adaptation level gradually changes while travelling through the tunnel for lighting purposes the tunnel can be divided lengthwise into five zones: the access, threshold, transition, interior and exit zone (Fig. 1).

The access zone

The access zone is not a part of the tunnel itself, but the approach road immediately before the tunnel entrance, from where drivers need to be able to see and stop in front of obstacles in the tunnel.

The length of the access zone is consequently equal to the safe stopping distance (SSD).

The maximum light adaptation condition of the drivers' vision in this zone, determines the luminance in the threshold zone at the beginning of the tunnel.

CIE defines the adaptation state as L_{20} , the average luminance in a conical field of view of $2 \times 10^\circ$ centred in the tunnel opening at the safe stopping distance from the entrance.

L_{20} measurements and recordings for the access zone over a long period are the most solid basis for the entrance lighting design (Fig. 2).

The threshold zone

The required luminance level in the first section of the threshold zone, which length is equal to the safe stopping distance, is related to the L_{20} , 'the outside luminance level', the stopping distance and the applied optical system as shown in Table 1 (next page). Daylight screens, louvres and other measures that reduce the L_{20} will proportionally reduce the amount of light and energy needed in the first zones of the tunnel. In the second half of the threshold zone the luminance level is decreased rapidly to 40% of the initial level (see Fig. 3 for a schematic representation).

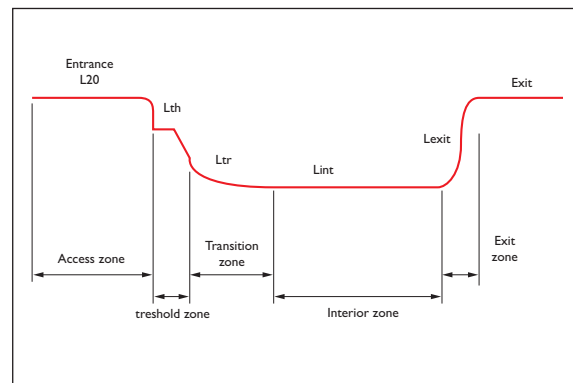

Fig. 1

The five tunnel zones defined for the purposes of lighting design

Fig. 2

Sketch showing the 20° conical field of view referred to in the text

Fig. 3

Representation of lighting level in various zones

Transition zone

In the transition zone the lighting level is gradually reduced towards the level as required in the interior zone (Fig. 3). The reduction speed is related to the adaptation speed of the eyes and thus time dependent. The reduction steps should not exceed a ratio of 3:1.

Interior zone

In the interior zone, which is often the longest section of the tunnel, the required lighting levels are related to traffic speed and traffic density as shown in Table 2.

Exit zone

Visual adaptation from low to high level takes place instantaneously, but there are other reasons for installing an increased lighting level in the exit zone:

- 1 to make small cars following behind large lorries visible when the daylight at the exit is glaringly bright,
- 2 to make following cars visible in the rear-view mirror of a car leaving the tunnel and
- 3 to convert the exit into an entrance (at reduced speed) in case of an emergency or for maintenance.

Emergency lighting

Emergency lighting is normally part of the night-time lighting, but is fed from an uninterrupted power supply.

Table 1 Recommended threshold/access zone luminance ratios		
Stopping distance (m)	Symmetrical lighting system Lth/ L20	Counter-beam lighting system Lth/ L20
60	0.05	0.04
100	0.06	0.05
160	0.10	0.07

2

3

Birth-Velbert tunnel, Germany.
1: threshold zone.
2 and 3: transition zones.

Lighting system

- Symmetrical lighting is used for the entrance and interior lighting.
- Asymmetrical lighting (counterbeam) is used for entrance lighting when high contrast values are required or when the tunnel is not too short. Counterbeam lighting is adapted when high luminance levels are required (high L_{th}/L_{20} or high stopping distance).

Symmetrical-transversal lighting

The light is mainly radiated at right angles to the axis of the tunnel. This results in good visual guidance, minimum glare, and light between the cars.

Symmetrical-axial lighting

The light is mainly radiated parallel to the tunnel axis, resulting in high efficiency and allowing wide luminaire spacing. However, occasional shadowing and uneven distance wall luminances can occur.

Asymmetrical-counterbeam lighting

The light is radiated parallel to the tunnel axis, mainly against the direction of the traffic flow, resulting in high efficiency and improved contrast, but with possible shadowing and uneven wall luminances.

Which lamp to use

The entrance of a tunnel needs high lighting levels of SON-T lamps. For other areas needing lower light levels, such as the interior zone or at night, compact fluorescent lamps can be used. Philips recommends TL-D and PL-L for the symmetrical-transversal lighting system and QL induction lamps for the symmetrical-axial lighting system. These white light sources are preferred for their good colour rendering over the more efficient SOX lamps. The light output of (compact) fluorescent lamps however is temperature dependent. In general, luminaire photometry is conducted at 25°C, but the average operating temperature in a tunnel can be much lower and therefore positively influence the efficacy.

Typical light distribution of the luminaire		max. sp/m.h. ratio	Preferred lamp type	Efficiency cd/W (q0=0.1)
Symmetrical-transversal		1.5	TL-D/PL-L	2.0
		1.5	SOX-E	4.0
		2.0	SON-T	2.8
Symmetrical-axial		3.5	SOX-E	4.5
		3.5	QL	2.4
		4	SON-T	3.5 - 4
Asymmetrical-counterbeam		2 - 2.5	SON-T	4.5

Ostiche tunnel, Belgium

Tunlite™

Tunlite™ – modular and flexible

The Tunlite™ range is a range of luminaires for the lighting of tunnels, underpasses and other heavy duty applications. It is based on a modular concept that allows great flexibility in lighting design. Many different optical and lamp combinations are possible within the same housing, giving the designer the opportunity to optimize the lighting solution whilst maintaining the basic luminaire shape. The Tunlite™ range, which comprises four standard housings, has been designed with installers and maintenance personnel in mind – it offers rapid, tool-free access, and all the main assemblies can be removed or exchanged quickly and easily. A choice of brackets is available for ceiling, wall and continuous line mounting.

www.philips.co.uk/lighting

Tunlite™				
Type	CRX202/203/204/206	Materials and finishing	Housing: high-quality extruded AlMgSi alloy profiles and die-cast aluminium rounded corners, argon-welded	
Light source	HID:		Finishing of the housing by chromatization in accordance with DIN 50939 followed by 60 µm polyester powder coating RAL 7016	
	CRX202		A self-adjusting removable front-glass frame of extruded aluminium, hinged on stainless-steel joints inside the housing and holding a 5 mm toughened one-sheet security glass. The IP66 integrity is maintained by two silicone rubber gaskets fitted at two levels in the extruded aluminium frame	
	1 x SON-T / E40 / 100, 150, 250, 400 W		A removable optic and gear unit consists of a dedicated optical system of high-purity anodised aluminium (99.9 %) and an electrical part containing all electrical gear. These modular units are easily interchangeable without the need for tools, which simplifies installation and maintenance	
	CRX203	Mounting brackets, bolts and washers (as accessories): stainless steel		
	2 x SON-T / E27 / 70 W	Nylon washers between the aluminium profile and stainless-steel bracket to prevent electrochemical corrosion

Telemanagement with the new Starsense system:

Starsense is a cost-effective telemanagement system for monitoring, controlling, metering and diagnosing outdoor lighting applications that saves energy, reduces maintenance costs and improves system reliability.

The system is designed to remotely manage and control outdoor light points on highways, roads, streets, in residential areas and in other similar applications. It enables individual light points to be switched on or off at any given time, or to be set to any dimming level that the lamp allows. The light points can be grouped to react at the same time depending on their specific location and thus provide different levels depending on, for example, whether they are lighting a roundabout or a crossing. It is also possible to programme different switching or dimming patterns depending on schedules or on the input of a weather sensor or traffic counter.

Starsense implements the most advanced repeating technology, enabling other light points to repeat commands when necessary, thereby ensuring that all commands will reach their destination whatever the state of the power grid.

Public lighting managers have long known that they could lower the operating costs of their systems if they could cost-effectively collect the critical data needed to make better planning and operational decisions. Starsense can achieve significant operating and energy cost savings while improving both the reliability and the quality of public lighting systems in combination with IP technology and the Internet.

Starsense monitors the age and condition of every lamp, thus eliminating the guesswork inherent in conventional installations.

Starsense can also be used to monitor failed lamps and report their location; maintenance costs can be minimised by considering the remaining life of nearby lamps that might be replaced during the same service call.

Finally, data collected by Starsense to track the hours of illumination for each lamp can be used to claim warranty replacement, establish unbiased product and supplier selection criteria, and validate energy bills for the system.

Architecture

Starsense is based on the LonWorks® protocol over power lines. This is an open protocol which is fully CENELEC EN50065-1 compliant, is known to work in outdoor lighting telemanagement solutions and is also used by other companies, thus allowing our customers to choose between different solutions available in the market without having to worry about which technology to use.

The Starsense system architecture consists of:

Outdoor Luminaire Controller (OLC)

Either built into the luminaire or fitted in the base of the pole, it switches and dims the lamp and detects lamp failures. It communicates to the Segment Controller via a power line and uses a 1-10 volt dimming signal as an interface to the electronic ballast and a relay to switch it on and off. The OLC has a digital input designed to connect to a photocell, enabling local control (switch on/off) when configured in this way.

Preferred selection

Product ID	Weight (kg)	European Order Code (EOC)
LLC7020/00	0.31	730868 99

Segment Controller (SC)

Built into the feeder pillar, it controls a number of OLCs connected to the same power grid and gathers information from them to be sent when required to the remote PC via a TCP/IP connection. The SC also has two inputs and two outputs that can be used to interface to other devices in the cabinet, such as traffic counters or weather sensors. Integrated into the SC is the Starsense Configurator Software, which provides installers and integrators with easy-to-use Web applications for configuring the OLCs and SCs on site, without any special skills being required.

A pre-configured version is also available. The SC is connected to a wireless router and contained in an IP rated housing, allowing an easy installation into feeder pillars. (please contact your Philips representative for more details)

Preferred selection

Product ID	Weight (kg)	European Order Code (EOC)
LFC7065	0.47	731841 00

Starsense Supervisor Software

For monitoring and managing the data from the SCs. It collects, aggregates and filters data before storing them in a central and open database. It provides Facility Managers with Web applications for analysing the data from this database in order to help them reduce maintenance costs and energy consumption and improve the lighting service. The Starsense Supervisor Software uses SOAP/XML commands, an open protocol to other asset management systems such as GIS (Geographical Information Systems) or billing systems.

Financial benefits**• Savings through dimming**

- Low traffic dimming
- Constant Light Output (CLO)
- Virtual Power Output (VPO)
- Daylight switching
- Increased lifetime of components

• Savings due to improved maintenance

With feedback of information you have better forecasting and planning:

- Improved group/spot replacement because no scouting is required
- Predictive information about lamp failure
- Only lamps that have reached group replacement time are replaced
- Burning hours information can be used to manage guarantees

Non-financial benefits**• Green issue**

- Dimming = less light nuisance
- Dimming = energy saving = lower consumption of fossil fuels
- Less toxic lamp waste

• Other

- Crime prevention by ensuring lights always on
- Saved maintenance time can be used for other purposes

Suitable luminaires for Starsense

- Iridium family
- Modena
- Koffer² family
- Other versions or other luminaires with Starsense available on request

Example: Iridium SGS254

SGS253 SON-T70W EB 230 II TP PC GR D6
 SGS253 SON-T100W EB 230 II TP PC GR D6
 SGS253 SON-T150W EB 230 II TP PC GR D6

Example: Modena SGP681

SGP681 MAC70W EB 230 II CR PC CO GR D6
 SGP681 MAC100W EB 230 II CR PC CO GR D6
 SGP681 MAC150W EB 230 II CR PC CO GR D6

Example: Koffer² SGP

SGP100 SON-T150W EB II ACF D6
 SGP100 SON-T100W EB II ACF D6

Chronosense

Chronosense allows energy savings by stand-alone step dimming without pilot cable; suitable for SON-T high-pressure sodium lamps. It is designed to work in combination with an external ignitor and standard electromagnetic ballast, coupled with an additional copper/iron dim coil, or tapped ballast.

Chronosense can also be used in combination with a Dynavision driver (connected to the 1-10V input).

Chronosense is not sold as an individual component, but is part of a luminaire.

Main applications

All applications that require dimming but for which no pilot cable is available: road and street lighting, residential and industrial areas, sports areas and tunnel lighting.

Ideal for applications for which specific dimming periods must be set in different places.

Features

- Provides dimming when no pilot cable is available
- Up to 35% energy savings
- No additional equipment on the network is needed
- Adaptable individual settings for dim down/up per luminaire
- Setting by dip switches
- For luminaires with lamp power up to 400 W
- Intelligent: adapts to daylight-saving time
- Built-in test mode
- Dimming duration independent of the switch on/off times

Installation

- Chronosense is available inside many outdoor luminaires
- Settings via dip switches directly on the component

Suitable luminaires for Chronosense

- Iridium family
- Koffer² family
- Modena family
- TrafficVision
- Other luminaires with Chronosense available only on request

The flexible stand-alone dimming solution

The Dynadimmer is a luminaire based controller that can drive 1-10V electronic drivers according to a programmable dimming schedule.

The Dynadimmer dimming schedule is flexible up to five dimming levels and five time periods. Easy-to-operate PC based software and programming equipment enable end-users to program the dim times and dim levels to their required specification.

Savings are maximised with the Dynadimmer. The fact that any level can be configured at any time makes very low levels late at night possible, high levels at peak times (though not necessarily 100%) and medium levels during the transitional periods. For example, the following dimming schedule gives an overall yearly energy saving of 40%.

Dimming pattern

Features

- Stand-alone, self-regulating 1-10V control
- Five dimming levels, five time zones
- Easy (re-)scheduling with PC based software
- Country selector secures very accurate time calculation
- Programmable in factory or at job site with robust tool
- Small matchbox size to fit in most luminaires

Benefits

- No need to add additional control cables
- Maximized energy savings up to 50%
- Strongly reduced CO₂ emissions
- Return on investment less than 2-3 years
- Dimming schedule can always be adjusted when needed
- Reduced light pollution and green image

Installation

Dynadimmer is available inside many outdoor luminaires.

Please contact your local sales representative for more details.

Architectural lighting

Build your city identity

Identifying landmarks is an important step in developing a comprehensive approach to the urban environment. Lighting a building, a monument or a specific architectural feature contributes to the identity of a city, town or village. It also creates a marker for orientation. Whether you are working on a single building or an entire masterplan, Philips can offer state-of-the-art technologies and solutions, backed up by more than a century of lighting application expertise.

OLAC, Lyon, France

Explore the opportunities

The Philips Outdoor Lighting Application Centre (OLAC), based near Lyon in France, is the only facility of its kind anywhere in the world. This unique life-sized city environment is a test-bed where designers, architects and city officials can experience how light can improve the quality of urban life.

It offers access to Philips' world-class expertise and application know-how in the field of outdoor lighting and city beautification. Allow us to demonstrate how innovative lighting can add an extra dimension to architecture.

To visit the OLAC, please contact your local Philips representative.

Transform your world

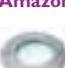

Philips transforms environments through new, dynamic uses of light. Our lighting systems and technologies apply the benefits of LED lighting, a highly efficient, long-lasting, environmentally friendly and inherently digital source of illumination, thus reinventing light itself as a highly controllable medium.

For applications of colour and colour-changing light, Philips offers a growing line of fixtures, controllers and power/data supplies for diverse installations. Our systems mean colour can now be used in places where this was previously impossible or cost-prohibitive, enabling ordinary walls to be transformed into animated, customisable surfaces that can change the entire mood of a space at the push of a button.

For more information see the scene setting controls section of this chapter on page 4.85.

ColorReach Powercore

ColorReach Powercore – next-generation LED floodlight for signature façades and structures

The ColorReach Powercore is a high-performance architectural floodlight – the first LED unit powerful enough to brilliantly and dynamically illuminate large-scale façades and structures. It combines all the benefits of LED-based lighting and digital control, including colour-changing effects, in an elegant product. With unparalleled output of over 5000 lumen and unprecedented light projection over 150 metres, this powerful fixture represents the next generation in exterior illumination.

ColorReach's interchangeable spread lenses support a multitude of light distributions and applications, including spotlighting, wall grazing and asymmetric wall-washing.

The cost-effective product offers saturated colour output combined with Powercore technology. Power and data management is directly integrated into the product, thereby ensuring operational efficiency and simplifying installation.

www.philips.co.uk/lighting

ColorReach Powercore	
Type	DCP770
Light source	104 x LED-HB
Light colour	Tri-colour: red, green, blue (RGB)
Power consumption	290 W
Power/data supply	Not integrated, data enabler to be ordered separately
Inrush current	8.50 A

DCP770

ColorReach DCP770 architectural flood-lighting luminaire with 104 LEDs

Accessories

Spread lenses

Driver	100-240 V AC / 50-60 Hz
Optic	5 (standard), 8, 13, 23, 43, 63, 5x17°
Controls	Philips full line DXM controllers, including Light System Manager; iPlayer3 or other DMX control sources
Materials and finishing	Housing: die-cast aluminium, powder-coat finish Lens: tempered glass
Colour	Dark grey
Installation	Fixation with bracket on surface Operating temperature: -40°C < T _a < +50°C Rotation: 360° Connection: integral male/female waterproof connector; 1.8 m leader cable Comes complete with Leader Cable
Lifetime	68.000 hours (50% lumen maintenance at T _a = 50°C)
Accessories	Spread lenses with bezel Leader cable, 1.8 m
Main applications	Flood lighting skyscrapers, monuments, bridges

LEDline²

LEDline² – composing with light

LEDline² is a high-performance linear grazing light to create colour changing effects and seamless curtains of light. The new white colour variations with LUXEON® K2 LEDs, from cold to warm white, are well suited to enhance architectural details or facades and buildings with high quality white light. The new Mini LEDline² is suitable for a variety of new accent lighting applications. To create luminance effects on facades a new crossbeam version is available. The LEDline² range offers a simplified installation by featuring DMX/RDM and various connectors, cables lengths and mounting brackets.

Wall and surface mounting possibilities

Wall and surface mounting possibilities: uplighting or downlighting

	LEDline², recessed
Type	BBS713 (300 mm length, 12 x LEDs version) BBS716 (600 mm length, 24 x LEDs version)
Light source	LUXEON® I: cool white, amber; red, green, blue LUXEON® K2: warm white, neutral white
Light colour	Mono-colour: blue (BL), amber (AM), green (GN), red (RD), cool white (CW), neutral white (NW), warm white (WW) BBS716: tri-colour: amber, white, blue (AWB), red, green, blue (RGB)
Power supply	220-240 V AC / 50-60 Hz (integrated gear)
Optic	Narrow beam: 6° Medium beam: 30° Wide beam: 60° Wide beam crosswise: 60° Asymmetric beam: 90° x [-7° ; + 43°] (I max at 36°)
Driver/electronic interface	DALI/1-10V protocol (mono-colours) DMX/RDM protocol (RGB, AWB, NW, WW)
Controls	ColourChaser Touch: DMX/RDM ColourChaser DMX144: DMX ColourChaser Wheel: DMX iPlayer3: DMX MutliDim DALI/ 1-10V (note: DALI/1-10V version does not store DALIscenes)
Options (in configurator)	XLR connector (X-HD series, 5 poles, IP65) Leader cables (1/2/3/5 m length)

Materials and finishing	Housing: cast aluminium Recessing box and cover: sheet steel Flush tempered front glass with dark-grey screen print and transparent optical window Bracket: anodized aluminium Frame and screws: stainless steel
Colour	Black painted
Installation	Wall- and in-ground mounting Supplied with sheet-metal recessing box and cover for ground or wall preparation: flush luminaire Suitable for permanent installation in ground with drainage system Internal optical unit tiltable: 10° Cool touch glass temperature: 50°C Optimal distance wall/optical unit: 150 to 300 mm Operating temperature: -20°C < T _a > 35°C
Lifetime	Optical module sealed for life; no internal cleaning required 50,000 hours (70% lumen maintenance)
Static load	500 kg
Accessories	Termination block DMX with XLR5 connector
Remarks	Thermal management system to ensure long lifetime
Main applications	Architectural outdoor (floodlighting, wallwashing, grazing)

eW Graze Powercore

eW Graze Powercore – linear white LED surface light for wall washing and grazing

eW Graze Powercore is a linear lighting product optimised for surface grazing and wall-washing applications requiring high-quality white light.

eW Graze Powercore offers superior illumination quality and dramatic energy savings for new installations and retrofit upgrades. Its space efficient, low-profile, exterior-rated aluminium housing and flexible mounting options allow discreet placement within a wide range of compact architectural details.

Featuring Powercore technology, eW Graze Powercore processes power directly from line voltage, eliminating the need for low-voltage, external power supplies.

www.philips.co.uk/lighting

eWGraze Powercore

Type	BCS419
Light source	12 x LED-HB (305 mm length version) 24 x LED-HB (609 mm length version) 36 x LED-HB (914 mm length version) 48 x LED-HB (1219 mm length version)
Light colour	Warm white (WW) Cool white (NW)
Power consumption	305 mm length version: 14 W 1219 mm length version: 56.3 W
Power/data supply	Integrated
Inrush current	1.10 A
Driver	100 / 120 / 230 / 277 V AC / 50-60 Hz
Optic	9 x 9° (9) 10 x 60° (10) 15 x 30° (15) 30 x 60° (30) 60 x 30° (30C)
Controls	Line Switch, ELV commercially available dimmers

Materials and finishing	Housing: anodized aluminium, extruded Lens: clear polycarbonate
Installation	Fixation with mounting hinge on surface Operating temperature: $-40^{\circ}\text{C} < T_a < +50^{\circ}\text{C}$ Max vertical aiming: 115°
Lifetime	50.000 hours (70% maintenance at $T_a = 50^{\circ}\text{C}$)
Accessories	Jumper cables (end-to-end 0, 305, 1500 mm) Leader cables (15,2 m)
Main applications	Architectural wallwash- and grazing lighting applications: buildings, facades, bridges

ColorGraze Powercore

ColorGraze Powercore – linear, colour-changing LED surface light for wall washing and grazing

ColorGraze Powercore is a linear product optimised for surface grazing, wall-wash lighting and efficient signage illumination. Featuring Powercore technology, ColorGraze Powercore processes power directly from line voltage, dramatically simplifying installation.

Superior beam quality offers uniform beam saturation as close as 152 mm, and a compact, low-profile design combined with flexible mounting options allows for discreet placement within wide-ranging architectural details.

ColorGraz Powercore

Type	BCS459
Light source	12 x LED-HB (305 mm length version) 24 x LED-HB (609 mm length version) 36 x LED-HB (914 mm length version) 48 x LED-HB (1219 mm length version)
Light colour	Tri-colour: red, green, blue (RGB)
Power consumption	609 mm length version: 35 W 914 mm length version: 52,5 W 1219 mm length version: 70 W
Power/data supply	Not integrated, data enabler to be ordered separately (DMX or Ethernet)
Inrush current	1.72 A
Driver	100-240 V AC / 50-60 Hz
Optic	9 x 9° (9) 10 x 60° (10) 15 x 30° (15) 30 x 60° (30) 60 x 30° (30C)
Controls	Philips full line DXM512 (RS-485) controllers
Materials and finishing	Housing: anodized aluminium, extruded Lens: clear polycarbonate

Installation	Fixation with mounting hinge on surface Operating temperature: -20°C < T _a < 50°C Max vertical aiming: 115° Connection: integral male/female waterproof connector
Lifetime	50,000 hours (70% lumen maintenance at T _a = 50°C)
Accessories	Jumper cables (end-to-end 0, 305, 1500 mm) Leader cables (15,2 m)
Main applications	Architectural wallwash- and grazing lighting applications: buildings, facades, bridges

ColorBlast 12 Powercore

ColorBlast – shaping dynamic ambience

Philips ColorBlast® offers a wide range of wall-washing effects with rich, saturated colours and colour changing effects. These compact, high-performance LED-based units offer ease and flexibility of installation, operational efficiency and outstanding control. They are sufficiently robust to withstand the demands of a wide range of indoor and outdoor applications. ColorBlast can be controlled by a Philips controller or a DMX512-compatible third-party controller.

Philips ColorBlast 12 Powercore offers high performance, operational efficiency and simplified installation. Powercore® technology integrates power and data management directly into the product and eliminates the need for an external power supply. ColorBlast 12 Powercore offers a choice of three different beams and is suitable for a wide variety of indoor and outdoor applications

iW Blast 12 Powercore

iW Blast – rich wall-washing effects

Philips iW Blast provides colour temperature-controllable (3000 - 6500 K) white light for creating wall-washing and grazing light effects. The intensity of the light output can be adjusted while maintaining or varying the colour temperature. Philips iW Blast is suitable for a variety of applications.

Philips iW Blast 12 Powercore features Powercore® technology, which integrates power and data management directly into the product and eliminates the need for an external power supply. This robust, high-performance white-light system offers outstanding operational efficiency and simplified installation, as well as excellent control with any Philips iW controller. For both indoor and outdoor applications.

LEDflood surface mounted

LEDflood LUXEON® K2 – enhancing structures

LEDflood is a distinctive outdoor floodlight range for illuminating and enhancing structures with light. Each LED is fitted with high-efficiency collimating optics, ensuring precise light distribution and uniform illuminance over longer distances.

LEDflood LUXEON® K2 is available with a fixed rotational beam ($2 \times 3^\circ$) or fixed linear beam ($2 \times 4^\circ/2 \times 25^\circ$) for grazing or spot/linear lighting. In combination with the patented Zoomspot system, the beam can be adjusted continuously from $2 \times 3^\circ$ to $2 \times 15^\circ$ within a single floodlight. Flexible aiming (tilt and pan) ensures freedom of installation.

The control platform for LEDflood is DMX, enabling dynamic light. The colour combinations WH/AM, BL/WH and AWB deliver the full palette of natural white, revealing the beauty of the architectural material used.

LEDflood is also available in a version for recessed mounting.

SmartFlood LED

Smart Flood LED – effective, efficient and economical

Smart Flood LED is a range of versatile IP65 outdoor floodlights in crisp-white, which is ideal for facade lighting and grazing applications. Equipped with super-bright collimated LEDs for true floodlighting, these compact luminaires are highly efficient, consuming between 16 to 90 W.

Smart Flood LEDs sleek styling and simple connections open up new possibilities for usage in tight spaces, and the fixture can be easily adjusted after installation to ensure the right effect at the right place. Smart Flood LED is available in three pre-wired sizes, along with IP65 interconnectors, combi-packed together with a clip-on wide-voltage gear box.

Mounting mechanisms are available on both the luminaire and gear box, enabling remote driving if needed.

The durable IP65 aluminium housing for both fixture and driver, combined with the long lifetime of the high-power LEDs, ensures maintenance-free operation over a very long period of time.

Smart Flood LED	
Type	BCP400 (large, medium, small versions)
Light source	Large version: 60 x 1 W LED-HP (mono-colour), 90° Medium version: 36 x 1 W LED-HP (mono-colour), 90° Small version: 8 x 1 W LED-HP (mono-colour), 90°
Light colour	Mono-colour version: Cool white, 6000 K
Current	Cool white and RGB 350 mA
Mains voltage	100-240 V
Power consumption	8 W / 36 W / 60 W (LEDs only)
Optic	Special collimating polycarbonate lenses on each LED Collimating angle: Large, medium, small, mono-colour version: 22°
Optical cover	Tempered glass cover

Driver	Clip-on external LED driver in IP65 gear box, driver can be remotely installed up to 30 metres
Materials and finishing	Housing: high-pressure, die-cast aluminium, non-corrosive Glass: thermally hardened, 4 mm thick Collimating lens: polished polycarbonate Clips: stainless steel SUS 304
Colour	Grey (GR) RAL 9006, painted
Installation	Surface mounted PG16/PG20 cable glands for all connections Operating temperature: -20°C < T _a < 50°C Adjustable tilt angle: +/- 180° Delivered with mains supply cable of 1 metre Aiming indicator integrated
Lifetime	50,000 hours (70% lumen maintenance at T _a = 25°C)
Main applications	Facade and area lighting, recreational

Beamer LED

Beamer LED – spot on

Beamer LED is a projector luminaire for outdoor architectural accent-lighting. It incorporates a single high-power LED and is designed for light projection over distances up to 30 m, with perfect control of spill light.

A choice of various beams, allows the product to be used in various outdoor applications, such as remote accent lighting, highlighting shapes and contrasts.

The aluminium housing and U-bracket ensure a robust, solid construction, enabling the Beamer LED to withstand harsh outdoor conditions. This projector offers maximum aiming flexibility – Zoomspot adjustment, beam rotation, tilt and pan – ensuring complete freedom of installation. In addition to cool white, warm white and saturated colours, thanks to the new Solgel filter technology yellow gold is also possible. Beamer LED is available in surface-mounted and pole-mounted versions.

ColorBurst 6

ColorBurst 6 – colourful spotlighting

Philips ColorBurst® 6 is a small, sleek solution – for spotlighting and wall-washing with rich, saturated colours and colour-changing effects. Projecting a soft-edge beam of light, ColorBurst 6 is a sealed product designed for a variety of indoor and outdoor applications. The 350° locking base swivel, with 350° locking system rotation, offers a versatile range of light positioning. The housing is equipped with a three-screw accessory ring to affix attachments, such as spread lenses and louvres. ColorBurst 6 offers outstanding control via a Philips controller or a third party controller and is DMX512-compatible when using Philips power/data supply.

iColor Accent Powercore

iColor Accent Powercore – creating seamless columns of colour

The iColor Accent Powercore is a direct-view luminaire that generates seamless colour-changing effects and enables low-resolution video displays for indoor and outdoor applications. Available in various sizes, the product is suitable for a variety of applications.

The iColor Accent uses Chromasic® technology to offer precise control in 3-cm increments, which allows it to reproduce video, graphics and intricately-designed effects in a host of architectural and entertainment settings.

The patented Chromasic® technology is a custom-designed microchip that integrates power, communications and control to enable next-generation digital lighting systems and networks. Chromasic is the 'brain' of next-generation LED lighting systems that enable a host of previously unimaginable applications.

C-Splash 2

C-Splash 2 – vibrant colour changing effects in water

Philips C-Splash 2 is an ultra-thin, rugged submersible LED system that generates vibrant colour-changing effects with outstanding control and flexibility. An IP68 rating makes it suitable for use in up to 3 metres of fresh or saltwater, even treated with bromine or chlorine - ideal for application in fountains, theme parks or harsh seaside environments.

It is available with a soft focus diffuser (22° beam angle) or a clear lens for extended light projection (10° beam angle). With inbuilt Chromacore®, Optibin®, and Temperature Monitoring Technologies along with unified power and data cabling, C-Splash 2 is really easy to install, experience and maintain.

iColor Flex – virtual experience

The iColor Flex is a multi-purpose, LED-based strand of lights for medium resolution Video with Light™ or perimeter lighting that generates extraordinary effects indoors or outdoors without the constraints of luminaire size, shape or space. It incorporates 50 individually controllable full colour LED nodes with clear or translucent lenses. Each node is powered by Chromasic® for individual control and self-addressing.

The iColor Flex SL offers maximum lighting control, is extraordinarily flexible (because any node can be virtually any colour at any time) and represents a cost-effective way of producing medium resolution Video with Light™.

The nodes are available in two spacings (10.1 and 30.5 cm), with custom spacing (up to 30.5 cm) available upon request. The flexible form factor means iColor Flex SL is able to accommodate 3D shapes, logos, etc.

The iColor Flex SLX is the larger-node and higher-intensity version for bigger impact and longer viewing distances.

eW Flex SLX – a versatile solution

The eW Flex SLX is a versatile strand of 50 white LED nodes that apply Chromasic® -based intelligence for individual control. Designed for accent or perimeter lighting or as a component of a custom fixture, eW Flex SLX provides lighting professionals with a 'building block' for the design and creation of custom applications. The durable, flexible form factor allows dynamic points of white light to be installed across nearly any interior or exterior surface – walls, ceilings, floors, as well as three-dimensional sculptures and set pieces.

A choice of colour temperature (2700 K or 4200 K) ensures design flexibility, while the high intensity node of light allows longer-distance viewing. These factors make eW Flex SLX an excellent choice for building outlines, signage applications, under-cabinet lighting, architectural details, amusement themes, store windows or other retail displays, museum lighting, restaurant, bar or nightclub lighting. Furthermore this product can also be used for Monochromatic Video.

dTube – full video experience

The dTube is a transparent outdoor rated tube mounted in an aluminium profile housing 12 or 16 best in class RGB LED pixels, specifically designed for creative video capable displays. This capability allows content managers and creative media specialists to display video from any source or any format, ranging from animations up to live broadcasts.

The dTube is one of the most energy efficient creative LED video systems in the market due to a balanced design of high efficient LEDs and industry leading integrated power management. This “green” solution allows designers and architects to save up to 50% in power consumption with the same display brightness and resolution.

The dTube concept is very robust with no need for complex back structures, allowing the final installation to remain transparent and lightweight. The design allows for free format layout and scalability, ranging from few m² up to thousands of m². As all system components are fully outdoor proof there is no need for additional arrangement for environmental protection.

Scene setting controls

Philips transforms environments through new, dynamic uses of light. Our lighting systems and technologies apply the benefits of LED lighting, a highly efficient, long-lasting, environmentally friendly and inherently digital source of illumination, thus reinventing light itself as a highly controllable medium.

For applications of colour and colour-changing light, Philips offers a growing line of fixtures, controllers and power/data supplies for diverse installations. The following tables provide a short overview of available controllers and power/data supplies.

			Product ID	EOC	Luminaire type		Preset type			Interaction

PROflood

PROflood – eye-catching display effects

PROflood is a waterproof projector allowing both image projection and creative light framing – a powerful tool that gives display lighting designers great creative freedom. PROflood makes its mark in many different ways. It highlights the most attractive architectural and natural features of the city. It can create a welcoming, safe and intriguing ambience. It is ideal for drawing attention to retail displays. It can be used to great effect supporting and enlivening cultural events and special occasions.

Its output can be adjusted to precisely match the surroundings or to create a particular effect. Colour Solgel filters are available to bring a touch of colour to the projected light, while textured glass screens create specific lighting effects.

www.philips.co.uk/lighting

PROflood	
Type	DCP608
Light source	HID: 1 x CDM-SA/T / G12 / 150 W
Lamp included	Yes (K)
Gear (integrated)	Electronic, 220 - 240 V / 50 - 60 Hz: Electronic (EB)
Optic	Four non-reflecting lenses: beam angle adjustments of 2 x 10° to 2 x 20° (Zoom spot) Image size (Ø): adjustable by moving the lens along the optical axis Image focus: adjustable by moving the two lenses along the optical axis Image uniformity: adjustable by moving the diaphragm (Ø 50 mm) along the optical axis
Materials and finishing	Housing and cannon: high-pressure die-cast aluminium Glass: thermally hardened, 4 mm thick Brackets and supports for gobo and glass filters: stainless steel Reflector: high-quality anodised aluminium

Colour	Dark grey (GR)
Installation	Pole at anything up to 6 m above the ground and wall mounting with a special bracket One M20 cable gland Ambient temperature outdoor: 25°C (35°C under certain restrictions) SCx): 0.12 m² Max. vertical aiming: -30 to +90°
Maintenance	Lamp access by opening the rear cover (does not affect the optical settings) No internal cleaning required
Accessories	Gobo (GOBO), diaphragm shutter (DSHT) Solgel colour filters, support for glasses
Remarks	Integrated electronic ballast, PrimaVision HID PV/150 220 - 240 V AC, 50 / 60 Hz, increases the lifespan of the CDM by up to 30% through faster elimination of the effects of mains voltage variation and by controlling the lamp ignition
Main applications	Modern and classical buildings, architectural floodlighting

DCP608

Please contact your local Philips representative for additional configurations

Light framing

PROflood has four adjustable parallelepiped shutters, made of stainless steel, for accurate direction of the projected beam.

Each shutter is secured in position by means of a nut brake.

For thermal reasons, the shutter can be adjusted manually for approximately 15 minutes after the PROflood has been switched on, then it becomes too hot.

Shutters

Image projection

A gobo support mounted in the projector allows fixation of any customised steel or glass gobo.

The gobo support has a nut brake and protective rings to firmly secure it. The gobo to be used is size A: 100 mm gobo diameter and 75 mm image diameter.

The gobo support can be adjusted between $+15^\circ$ and -15° , which allows very accurate positioning of the gobo itself.

Gobo support

Anamorphosis

When the PROflood is installed to one side above or below the axis, the projected image without gobo correction becomes distorted.

To overcome this, dedicated software has been developed to calculate the required gobo form to offset the distortion.

PROflood's internal structure

Example of anamorphosis

Accessories

Blue, light blue, green, magenta or yellow Solgel filters or a red tinted filter can be added to PROflood. The colour filter support needs to be ordered separately.

Colour filters to bring a touch of colour to the projected light

Glass screens

There are also two different types of textured glass screen for the creation of specific lighting effects. The grained screen softens the beam, whereas the fine-ridged screen spreads the beam in either a horizontal or vertical direction (on demand only).

Fine-ridged glass

Object lit by fine-ridged glass

Decoflood

Decoflood – the ideal solution for city beautification

Decoflood is a family of seven high performance floodlights, offering aesthetically pleasing yet surprisingly rugged luminaire designs. An extensive range of lamps provides a choice of colour appearance and colour rendering, while twenty different optics offer a wide selection of beam spread patterns. Even more options are available, with further choices of refractive glass plates and stylish louvres.

Decoflood 605/606 accessories

For the Decoflood floodlights with a round form (605 and 606), a support (ACS) is required before any accessory can be fitted. If a cannon, refractive glass and/or a colour filter are to be fitted alone (without any other accessory), a special base (BS) is required.

Lighting effect on a façade, with the floodlight positioned opposite the façade.

Standard glass

Grained glass (BSO)

Honeycomb glass, vertical pattern (VBSO)

Honeycomb glass, horizontal pattern (HBSO)

Diamond-point glass, vertical pattern (VBSP)

Diamond point glass, horizontal pattern (HBSP)

Fine ridged glass, vertical pattern (VLBSP)

Fine ridged glass, horizontal pattern (HLBSP)

Decoflood 607 accessories

For the Decoflood 607 floodlight, a glass support (GLS) is required if refractive glass and/or a colour filter are to be fitted (with or without another accessory).

Decoflood 616/617 accessories

For the Decoflood floodlights with a rectangular form (616 and 617), a glass support (GLS) is required if refractive glass and/or a colour filter are to be fitted (with or without another accessory).

Combination filter+glass
Decoflood 616 : 100 W max (*)
Decoflood 617 : 250 W max (**)

Lighting effect on the wall, with the floodlight positioned at the foot of the façade and directed upwards

Standard glass

Grained glass (BSO)

Diamond point glass (BSP)

Decoflood 619 accessories

For the Decoflood 619 floodlight, the refractive glass or filters are supplied together with their support, if ordered separately.

It should be noted that if specifically requested in advance, these and the louvre can be fitted by us. Please, contact your local Philips representative for these configurations.

The accessories available are louvres:

- round (RL) for the versions with the round optic
- horizontal (HL) for the versions with the symmetrical rectangular optic

These accessories are secured systematically on the exterior of the floodlight, but without adding a support frame.

It should be noted that if specifically requested in advance, in some cases they can be fitted inside the floodlight.

Materials and finishing	Housing, front frame and rear cover: high-pressure die-cast aluminium Glass: toughened, 4 mm thick Gaskets: silicone rubber Mounting bracket: paint-coated aluminium End caps: polypropylene, UV-stabilised Reflectors: high-grade anodised aluminium
Colour	Housing and bracket: dark grey (GR), RAL 10714 End caps: light grey Other RAL colours available on request

Installation	Ceiling, wall or floor mounting, optional pole mounting Rear access for mains connection, cable entry via M20 cable gland (2 cable glands for through-wiring facilities) Protractor scale integrated Ambient temperature outdoor: 35°C Drag factor (Cx): 0.78 Projected area in horizontal position: 0.07 m ² Max adjustment from the horizontal: -180 to +180° Max vertical aiming: -30 to +90°
Maintenance	Hinged front window with quick-release fastener No internal cleaning required
Accessories	Solgel and glass filters in various colours, refractive glass plates, glare shield, cannon, louvres, protection grid, barndoors, base ring, accessory support
Remarks	'Memory ring' integrated for immediate re-aiming if the floodlight should be swivelled off-beam
Main applications	Parks, pathways, architectural floodlighting, bridges, structures, sculptures

Brandenburg Gate, Germany

Mini Decoflood	
Type	DWP603 (with or without remote gear box) DWP604 (with gear included)
Light source	HID: 1 x MASTERColour CDM-R / E27 / 35 W Halogen: 1 x or 2 x MASTERLine ES / GU5.3 / 45 W 1 x MASTER PAR20 E / E27 / 20 W (only for DWP603 version)
Lamp included	No
Mains voltage	240 V
Gear	Electro magnetic (low loss), 240 V / 50 Hz Electronic, 230 - 240 V / 50 - 60 Hz: Electronic (EB)
Transformer	Electronic (ET)
Options	Extension arm of 350 mm length (HMA) Safety classes: Class I, Class II, and Class III (for DWP603 version) Dimming possibility for halogen lamp versions
Materials and finishing	Housings: die-cast high-pressure aluminium Glass: toughened, 6 mm thick Gasket: silicone rubber Screws: stainless steel Extension arm: extruded aluminium Glare shield (accessory): die-cast aluminium

Colour	Dark grey (GR), RAL 10714 Other RAL colours available on request
Installation	Floor mounting by the integrated gear box (DWP604 version) or base plate (BA) and separate gear box (DWP603 version) Two cable glands for through-wiring facility Angle indicator with marking integrated Ambient temperature outdoor: 35°C, 25°C for MASTER PAR20 E lamp version Drag factor (Cx): n/a Max adjustment from the horizontal: 350° Max vertical aiming: -90 to +60°
Maintenance	Lamp access by opening the front glass No internal cleaning required
Accessoires	Solgel filters in various colours, glare shields with and without colour filters, vertical louvre
Remarks	Compliant with IEC 598 and EN 60598
Main applications	Modern and classic buildings, architectural flood lighting, sculptures

Colour filters to bring a touch of colour to the projected light

Mini Decoflood DWP603/604 flood lighting luminaire with glare shield, colour filter (yellow) and two vertical strips

DecoScene

DecoScene – bringing the night scene to life

DecoScene is a ground recessed uplighter for enhancing, highlighting or even revealing the architecture of the city at night. An unobtrusive presence by day, DecoScene offers a wide choice of light sources, beams, adjustment possibilities and accessories to deliver the optimum upward lighting effect after dark, e.g. to illuminate monuments, highlight a striking piece of architecture or mark out a luminous path through a park or garden.

The DecoScene range, comprising three conventional versions (DBP521, DBP522 and DBP523) and one LED version (BBP521), complies with the IEC 60598-2-13 norm and offers a glass temperature below 80°C. A wide choice of accessories is available, e.g. for enhanced guidance.

The small DecoScene is designed around the compact high performance MASTERColour CDM-Tm Mini 20/35 W lamp. Together with the integrated PrimaVision mini-gear, it offers a unique combination of miniature size, excellent light quality and energy efficiency. The small DecoScene also incorporates dichroic halogen lamps, which offer ideal colour rendering, and a PL-T lamp for marking a path.

The DecoScene LED Guidance offers a choice of saturated colours with an attractive, uniform light effect, as well as the option of dynamic guidance, for instance to highlight parking places. Available in white, blue, amber, green, red and RGB, the low-power LED modules can easily be exchanged to extend the lifetime of the luminaire.

DecoScene DBP521 ground recessed luminaire

DecoScene DBP522 ground recessed luminaire

DecoScene DBP523 ground recessed luminaire

A wide choice of optics

The DecoScene housing is made up of four main parts: the ground housing, the luminaire housing, the protective glass and the top fixing element.

In the luminaire housing the anodised aluminium reflector offers a large choice of different beams: circular narrow, medium or wide beams for accent lighting and rectangular symmetrical and asymmetrical beams for uniform illumination of facades.

The optic can be adjusted up to 20° for circular beams and up to 10° for rectangular beams with 100% of the beam being utilised. The optic is locked after adjustment and does not need to be unlocked during relamping.

Beam angles

Circular beams

Narrow beam

2x3°

Medium beam

2x9°

Wide beam

2x14°

Rectangular beams

Rectangular symmetrical beam

8° / 2x39°

Rectangular asymmetrical beam

-15°, +9° / 2x37°

Colour your light

DecoScene integrates the innovative SolGel colour filters, which are available in different colours. SolGel filters are a highly cost-effective means of creating attractive colour effects on illuminated facades or objects and creating grazing light free of unwanted colour variations.

Six standard colours and six warm and cool filters are available.

Range of colours

Glass effects

Clear glass

Frosted glass

Frosted inside for softening the beam and creating diffuse and uniform light.

Half moon frosted glass

Partially frosted inside to soften the edges of the beams against the wall and to give a nice horizontal cut-off at the bottom. The frosted part of the glass faces the facade.

Honeycomb glass

Multidirectional beam softener. The glass creates a diffuse and uniform light.

Fine-ridged glass

Unidirectional beam spreader. The fine-ridged glass aimed towards the facade spreads the beam vertically.

Amazon

Amazon – a touch of ambience

Amazon is a ground-recessed floodlight for outdoor uplighting effects, e.g. for guidance along a garden pathway or to create a dramatic outdoor ambience. It comes with three colour filters (forest green, marine blue and natural white) and a refractor for appealing effects. The vandal-resistant TouchSafe cover means the diffuser can be touched without fear of burning your fingers. Thanks to its shallow recess depth, Amazon is particularly easy to install.

At the heart of the Amazon LED range of marker lights are top-quality diodes that deliver outstanding brightness. Amazon LED offers a choice of five different colours – yellow, red, blue, green and white (colour temperature 5600-6500 K) – to add a touch of ambience to a variety of settings.

Wall marker, asymmetric LED

Wall Marker Asymmetric LED – a future-proof direction

The new Wall marker asymmetric LED is ideal for wall and step lighting, and illuminating paths and areas or access routes. Thanks to the LUXEON® K2 LEDs, it provides an efficient lighting solution with excellent luminance. Three choices of brightness levels are available. Rugged die-cast aluminium construction, with an enclosed light engine provides IP54 protection.

DWP

DWP – Architectural accents

The new outdoor DWP architectural accent range is a family of asymmetrical wall lighting fixtures. It produces a powerful direct or bi-directional light distribution that will enhance the architecture of building facades. It is ideal for walkways, atria's and shopping areas.

The compact aluminium housing and black or anthracite finish guarantee optimum visual integration. The range comprises two sizes; a small version for direct down lighting and a large version for direct and/or indirect lighting.

The DWP range is available in a round and square design.

Marker LED BBG310 ground and wall recessed luminaire, square

Marker LED BBG320 ground and wall recessed luminaire, rectangular

Marker LED

Marker LED, round	
Type	BBG300 (220 - 240v version)
Light source	Mono: 12 x SMD LED
	RGB: 10 x SMD LED
Light colour	Mono: red, green, blue, amber, cool white
	RGB
Power supply	BBG300: 220 - 240v / 50 - 60Hz - integrated
Power consumption	Max 4W (RGB 220 - 240v)
Optic/cover	Glass with internal diffuser
Lifetime	50,000 hrs (70% lumen maintenance)

Option (only in RGB version)	Lighting controls: ColourChaser DMX, ColourChaser Wheel
Material	Top cover: tempered glass
	Top ring: stainless steel
	Gearbox: polycarbonate
Installation	Wall and ground recessed
Accessory	Must be ordered separately, Recessed and pre-recessed boxes suitable for concrete ZBG300
	RMB+RMBH and ZBG300 RMB+RMBH RGB
Main applications	Outdoor (urban), indoor (office, retail, hospitality)

Underwater LED BCB450/BCB451

Underwater LED K2 – illumination in water

Underwater LED is a compact, innovative spot and recessed solution designed to create amazing effects in wet or water environments, like fountains. Fully IP68 to a depth of 10m, it offers a choice of beams for precision illumination of, for example, fountains or ponds.

Underwater LED is available in blue, white and RGB versions; other colours are available upon request.

Underwater LED BBB451

Underwater LED BCB450/BCB451

Underwater LED	
Type	BCB450 (surface-mounted version)
Light source	3 x LUXEON® I
Light colour	Mono-colour version: cool white (CW), blue (BL) Tri-colour version: red, green, blue (RGB)
Power supply	Current driven, 350 mA
Power consumption	Max 4 W
Optic	Beam angles: Mono-colour: 12 and 30° Tri-colour: 12, 30 and 40°
Options	Lighting controls: for RGB version: Philips full line of DMX controllers, with slave interface

BCB450

Underwater LED BCB450 architectural flood-lighting luminaire, surface-mounted

Materials and finishing	Housing: stainless steel and chrome Bracket: stainless steel Cover: tempered glass
Colour	Glossy silver
Installation	Surface mounted with separate available ECB450 range of drivers (and ECB450 DMX slave for tri-colour version) No preference in orientation Operating temperature: -20°C < T _a < 35°C
Lifetime	50,000 hours (70% lumen maintenance at T _a < 25°C)
Accessories	Range of drivers and DMX slave
Remarks	External driver required
Main applications	Underwater; outdoor and indoor

Flex LED^{NG}

Flex LED – bendable light, in vivid colours

The next-generation Flex LED is a linear luminaire that enables smooth contour lighting, even around corners. 79 LEDs per metre encapsulated in insulating PVC produce a high and uniform luminosity.

Its miniaturised, flexible structure and uniform luminance makes it ideal for integration in architectural elements as well as for cove and decorative lighting. Real flexibility is ensured via different standard lengths and interconnectivity of up to 100 metres, even between different colours.

The next-generation Flex LED can be custom configured on site with the help of tool-free IP44 connectors. Moreover, high impact resistance and very low consumption make it a great replacement for expensive neon lighting.

Each colour is available in 5 standard lengths – although the unit lengths may vary depending on the colour. Two different power supply units and special mounting accessories are also available.

www.philips.co.uk/lighting

Flex LED NG	
Type	BCC200
Light source	79 x LED-LP per metre
Light colour	Mono-colour version: cool white (CW), red (RD), green (GN), blue (BL), amber (AM)
Power supply	220-240 V / 50-60 Hz
Power consumption	5.7 W per metre
Optic	PVC diffuser
Materials and finishing	Silicon modified PVC encapsulation
Installation	Surface mounting via provided clips, shielded from direct ingress Connection via built-in weatherproof connectors Operating temperature -20°C < T _a < 40°C Adjustment: as indicated in mounting instructions

Lifetime	10,000 hours (70% lumen maintenance at T _a = 25°C)
Accessories	Drivers 1.6 Amp IP44 and 4 Apm IP44, mounting tracks, extension cable
Remarks	External driver required Available in different lengths: Red and amber versions: 1.52, 3.04, 10.64, 19.76 and 50.16 m Green, blue, cool white: 0.91, 1.82, 10.10, 20.20 and 50.50 m Product can not be cut to size
Main applications	Architectural contour lighting, signage, coves

Sports and area lighting

Championship lighting for champion players

Today, sport is the world's biggest entertainment industry. Events such as the Olympics, soccer's World Cup and the NBA Championships capture the attention of almost everyone on the planet – thanks mainly to media coverage.

High-end sports

In fact, TV is largely responsible for sport's current status and it is the main driver of sports business development. At evening or night-time events, broadcasters require excellent lighting of the playing surface. Although the lighting should illuminate the players perfectly – and in some cases the live spectators too – it should never disturb them. Players and fans must experience optimal visual conditions – without glare – at all times. Philips has available in-house the lighting technology and sports broadcasting know-how required to design all the elements of an optimised sports lighting system – housing, lamp, optic and gear. In addition, many years of experience have enabled Philips to gain unrivalled competence in application development and sports lighting design. And thanks to the ArenaVision concept, Philips is present in all major sports, in the most prestigious stadia across all continents, and is recognised as the true world champion in sports lighting.

The answer to all your needs

Being a market leader in top-end sports lighting has given Philips the expertise to define the most efficient and appropriate lighting systems for recreational sports.

Recreational sports

Philips' leadership is also the result of its long-term technical co-operation with many international sports federations, such as for football, basketball, tennis and hockey, to name just a few. This technical partnership has helped these sports federations to define the lighting standards for their sports and has further strengthened Philips' competence in recreational sports lighting. Building upon this partnership, Philips has for many years now been developing innovative optical systems which help reduce light pollution thanks to sharp cut-off beam characteristics. On top of its unrivalled expertise, Philips is the only manufacturer that has all the necessary technologies in-house – lamps, controls and gear, optical systems and housings – and is therefore able to guarantee optimum system performance. So, whatever the sport, whatever the level of competition, whatever the venue, Philips' impressive range of sports lighting solutions will provide the answer to all your needs.

For safety and efficiency

The 24-hour economy has led to a massive increase in human activity around the clock. Whether at a production centre, airport, container terminal or industrial site, activity can be ongoing throughout the night.

The efficiency of such locations is greatly increased by lighting, which also contributes to the safety and security of those working on site. The two most relevant criteria when selecting area lighting are: the efficiency of the system (long burning hours) and the limitation of spill light (of key importance for the surrounding environment, which might be residential).

In area floodlighting, Philips' first objective is to understand and adapt to the specific customer needs. For each situation, Philips can define the right level of lighting, uniformity, comfort and colour quality. Also, we can optimise the cost of ownership, enabling the end user as well as society in general to benefit from the resulting energy savings. Moreover, in line with our policy of environmental care, Philips has developed innovative optical systems which help reduce light pollution thanks to sharp cut-off beam characteristics. These reflectors are integrated in an impressive range of floodlights.

ArenaVision

ArenaVision – now with even greater optical efficiency

Since it was first introduced in 1988, Philips ArenaVision has proven to be the best floodlighting system ever for sports lighting applications, most of which have to fulfil the highest specifications to enable television coverage of national and international events.

ArenaVision – a great partner

ArenaVision is an integrated system that is supplied by one manufacturer as part of a complete system. Philips is the only manufacturer to provide all relevant technologies from lamp to gear to floodlight, so that everything works in synergy. With ArenaVision, the key disciplines of lamp, optic and gear design were brought together with a single mission: to create the best possible floodlight that will operate effectively for many years.

Thanks to the innovative new Philips MHN-SE 2000 W compact single ended metal-halide lamp and high-tech single piece precision optics, the new 2 kW ArenaVision MVF404 offers much higher optical efficiency than ever before.

In addition to increased light output and optical efficiency, the upgraded 2 kW ArenaVision floodlight boasts many improvements, such as easy lamp fitting and replacement, a new safety knife connector system and a breakthrough electronic hot-restrike solution – while continuing to offer all the benefits of its predecessor as well.

The ArenaVision range includes two floodlights: The ArenaVision MVF404, dedicated to outdoor sports stadiums and large indoor arenas, is specially designed to increase dramatically the theatrical and emotional value of sports for TV audiences, spectators and players. The ArenaVision MVF403 is ideal for indoor sports halls as well as many outdoor sports and other illumination uses.

Both come with a variety of reflectors and lamps and offer a choice of optical systems and three levels of power output for every conceivable application.

www.philips.co.uk/lighting

MVF403

MVF404

Exclusive lamp technology only in ArenaVision

The innovative ArenaVision MVF404 floodlight is fitted with a new compact single-ended lamp, which has been developed specifically and exclusively for ArenaVision and brings out the best in the game.

This new Philips Short-Arc MASTER MHN-SE 2000 W / 956 lamp is a quartz metal-halide lamp designed to meet high demanding lighting and TV broadcasting requirements, e.g. excellent colour rendering ($R_a > 90$), daylight appearance (T_c 5600K) and hot re-strike capabilities to ensure immediate re-ignition after a short power cut. Its single-ended GX22 lamp base enables it to be mounted in the lampholder in an axial position, without an outer envelope and is suitable only for a mains voltage of 380-415 V/50 Hz. Together with the special optics designed around the axial concept, this ensures maximum optical efficiency and enables accurate light distribution with a minimum of spill light.

Sports floodlighting

The new lamp has been developed for universal burning positions to allow the floodlights to be mounted in any standard positions needed.

The hot-restrikeable MASTER MHN-SE 2000 W lamp operates in combination with a standard Philips gear unit.

Lamp specifications

	Power (W)	Supply voltage (V)	Light output (Lm)	Luminous efficacy (Lm/W)	Cap/ base	Operating position	Average lifetime (h)	Lamp current (A nominal)	Lamp voltage (V nominal)

Increased optical efficiency

The ArenaVision MVF404 floodlights have been designed with the latest 2000 W axial lamp-optical concept providing more light, which is controlled by the world-class design optical system to give greater efficiency.

Consequently, even fewer luminaires are required for the application coverage, allowing substantial savings on capital, energy and maintenance.

Like the previous 2 kW version, the innovative ArenaVision MVF404 offers a choice of several distinct beam distributions, each with sharp cut-off characteristics. The new mono-block optics, which have been designed specifically for the new axial lamp-optic concept using the highest-purity aluminium, enable greater freedom in lighting design than ever before.

Lower installation and maintenance costs

Thanks to the new compact lamp and a simple spring-clip device, lamping and relamping have been made much easier, and can be done with one hand.

The lamp can easily be fitted into the lamp socket, while tight tolerances mean there is no room for error. On-site handling is more straightforward, quicker and therefore cheaper.

Safety knife connector system

In the ArenaVision MVF404, safety is ensured by means of the built-in safety knife connector system, which automatically disconnects the mains power when the rear-access back cover is opened, without the need for an additional relay or contactor or any extra cabling.

This can also give rise to savings on capital and installation costs.

Breakthrough electronic hot-restrike option

The (optional) hot-restrike version of the ArenaVision MVF404 is designed to ensure immediate re-ignition after a short power cut, so as to prevent long periods without light.

The floodlight comes equipped with a special electronic compact hot-restrike module, which is permanently fixed to the luminaire.

Thanks to innovations in technology, with the new electronic hot-restrike system everything is incorporated into a single module with integral timer to provide the most economical solution.

	ArenaVision
Type	MVF404
Light source	HID: 1 x MASTER MHN-SE / GX22-HR / 2000 W
Lamp included	Yes (light colour 956)
Optic	Beam category B1 (B1) Beam category B2 (B2) Beam category B3 (B3) Beam category B4 (B4) Beam category B5 (B5) Beam category B6 (B6) Beam category B7 (B7) Beam category B8 (B8)
Optical cover	Front-glass for downlighting (DOWN) and uplighting versions (UP)
Ignitor	Series (SI), integral Hot-restrike, electronic (HRE), integral
Options	Aiming memory (AM) to safeguard the original aiming position of the luminaire during servicing Hot re-strike versions enabling immediate restoration of lighting after power supply failure Uplighting versions available for architectural lighting Special cable sleeve version for tropical regions
Materials and finishing	Housing and rear cover: non-corrosive, high-pressure die-cast aluminium Glass: chemically toughened, 1.6 mm thick (for downlighting versions), ceramic 3 mm thick (for uplighting versions) Mounting bracket: hot-dipped galvanised, painted steel Clips: stainless steel (to secure the back cover) Reflector: anodised and brightened 99.99% aluminium Finishing in raw aluminium

Installation	On mast head frame, ceiling, wall and floor mounting The lamp is easily installed and lamping/relamping can be done with one hand only Precision aiming facilities at both top and bottom of the housing for use in conjunction with the ZVF403 PAD accessory Adjustment of mounting bracket: 360° Ambient temperature outdoor: 35°C (25°C indoor) Drag factor (Cx): 0.93 Projected area in 70° position: 0.20 m ² Max adjustment from the horizontal: -90 / +90°
Maintenance	Lamp access by opening clips of rear cover (tool-less) Equipped with knife connector system, which automatically disconnects the mains power when the rear-access back cover is opened (no need for additional relay/contactor or any extra cabling) No internal cleaning required
Accessories	External louvre (ZVF403 GS), precision (ZVF403 PAD) aiming device
Remarks	Equipped with series ignitor (SI) and terminal block in aluminium connection box on the bracket Colour filters for architectural lighting are available on request Wire mesh to prevent large glass falling out Pre-wired 380 - 415 V / 50 Hz gear trays (ZVF320) are available, to be ordered separately
Main applications	Outdoor sport stadiums

PowerVision

PowerVision – high performance floodlighting

PowerVision is a high performance general purpose floodlight for sports lighting, general area lighting and facade illumination. This compact luminaire distributes a low-glare, wide, medium or narrow beam evenly, accurately and efficiently. With the MHN-LA 2000W/842 lamp, the natural colour rendering ($R_a = 80$) and comfortable atmosphere ($T_c = 4200\text{ K}$) are well suited to TV and filming. With the MHN-LA 2000W/956 lamp, the highest international CTV requirements ($R_a = 90, T_c = 5600\text{ K}$) are met. A built-in skirt in the reflector assembly minimises spill light and glare.

Integrated system of optics, gear and lamp in a single housing, ensuring high beam efficiency and a well controlled beam. Built-in skirt in reflector assembly minimises spill light and glare. The luminaire's rugged all-weather construction is designed for easy aiming, simple cleaning and speedy servicing.

Easy relamping without disturbing position

PowerVision MVF024 sports and area flood lighting luminaire with external anti-glare louvre (ZVF024 L)

Adjustment possibilities

Khalifa Olympic Stadium, Doha, Qatar.

Optivision

OptiVision – breakthrough downlight

OptiVision MVP507 is an asymmetric downlighting luminaire that combines compact dimensions with very high efficiency. Available with narrow, medium and wide beams for flexibility in application, it provides excellent control of spill light, glare and upward leakage of light. OptiVision MVP507 can accommodate metal halide lamps for good colour rendering or high pressure sodium lamps for economical operation.

In addition, OptiVision can be mounted above or below a crossbar simply by inverting the bracket. This allows multiple lights to be fitted on each mast.

Adjustment possibilities

Marina Bay Street – Formula-1 Circuit, Singapore

The Marina Bay Circuit is fitted with nearly 1,500 lighting projectors, illuminating the 5,067 km track with light that is four times brighter than a football stadium at night. Because the track is a street circuit, the lighting system is temporary. The heights of the lights will vary to accommodate the trees lining the road. The lights are also set deliberately lower than the canopy, and will not interfere with underground public services such as water and gas pipes, and electricity cables. For this specific application, a special optical system has been developed in collaboration with Mr. Valerio Maioli, lighting consultant for the Formula 1 competitions.

Sports and area lighting

Gear trays

ZVF320

A range of prewired gear trays is available for higher wattage lamps. A gear tray consists of a metal tray on which electrical components (capacitors, ballast, ignitor), wiring and terminal blocks are mounted. These gear trays are normally used in combination with flood lights, which cannot integrate electrical components because of lack of space or because of high temperatures.

www.philips.co.uk/lighting

ZVF320 WV prewired gear tray in wide version

ZVF320 LV prewired gear tray in long version

ZVF320	
Type	ZVF320
Light source	HID <ul style="list-style-type: none"> 1 × MHN-SE / 2000 W 1 × MASTER MHN-SA / 1800 W 1 × MASTER MHN-LA / 1000, 2000 W 1 × MASTER MHN-FC / 1000, 2000 W 2 × MASTER HPI-T Plus / 400 W 1 × MASTER HPI-T Plus / 1000, 2000 W 2 × SON-T / 400, 600 W 1 × SON-T / 600, 1000 W
Supply voltage	240 V / 50 Hz and 380-415 V / 50 Hz <p>Note: mains supply voltage may not fluctuate by more than -8 and +6% from the rated voltage of the ballast</p>
Ignitor	Semi-parallel (SP) or parallel (PA) ignitors supplied on the gear tray provide high voltage pulses across the lamp <p>Series (SI) ignitor versions of the gear trays are not supplied with the ignitor and the series ignitor is provided in the connection box attached on the bracket of the floodlight and enables long distance between floodlight and gear tray</p> <p>Versions for (non-electronic) hot re-strike (HR) are only available for MHN-SA 1800 W and MHN-LA 1000 W lamps in wide version only. The hot re-strike ignitor is located at the back of the luminaire and acts at the same time as a normal series ignitor. A timer fixed onto the gear tray controls the duration of the ignition</p>
Capacitor	A set of parallel capacitors is used to obtain a power factor of the lamp/ballast circuit up to 0.90

ZVF320 LV

Options	Available in two different sizes. A wide version (WV) for mounting in the individual gear box or in a custom made cabinet, which can house several gear trays, and a long version (LV) for mounting in poles or a cabinet <p>Semi-parallel ignitors suitable for short distance (SD) or long distance (LD) depending on cable capacitance</p> <p>360-400 V / 50 Hz version for MHN-LA 2000 W only</p> <p>Fuse (FU) (not for hot re-strike (HR) versions)</p> <p>Note: fuse option applies as 1-phase protection for 240 V versions and 2-phase protection for 380-415 V versions</p> <p>Through-wiring versions available only on request</p>
Materials and finishing	Tray: pre-galvanised steel <p>Wiring: solid copper conductors, 1.5 mm² insulated with PVC</p>
Installation	Ready for mains connection. Only cabling needs to be installed between gear tray and luminaire <p>Connectors made with screw terminals live, neutral, earth for mains supply</p> <p>Lamp connections clearly marked and to be used for cable cores up to 16 mm²</p> <p>Ambient temperature: 35°C</p>
Accessories	Aluminium IP65 gear box, ZRP320 GRB-W (suitable for wide versions only) supplied with two PG13.5 cable glands accepting cable diameter between 6 and 12 mm ² .
Remarks	Gear tray provided with earth screw
Main applications	Poles, columns, cabinets, individual gear boxes

OptiFlood

OptiFlood – compact and complete

Good artificial lighting prevents uncontrolled stray light and light spillage beyond the boundaries of the area being illuminated, so that it does not affect people living close by or driving past.

Philips has a long tradition of excellence in environmentally friendly asymmetric floodlighting systems for general area lighting as well as security and industrial area lighting – e.g. with the successful launch of the OptiFlood MVP506 floodlight in 2004. Now the OptiFlood range is being extended with a new small version, MVP504, for low lamp wattages and application heights.

OptiFlood's extremely efficient best in class, optical system provides an accurately controlled light distribution – total light cut-off above the horizontal and a peak beam intensity at high angles – keeping obtrusive light to a minimum. Both the MVP504 and MVP506 versions are available with two types of reflector – asymmetric or road lighting POT optics – for flexibility in application and can accommodate CosmoPolis, metal halide lamps for good colour rendering or high pressure sodium lamps for economical operations.

With its compact shape and aesthetically pleasing design, OptiFlood can be used in applications where design and appearance are just important as technical performance. In the design, attention has been focused not only on the overall form, but also on the detailing as well. This has led to integrated 'hidden' hinges, angle adjustment designed as part of the body and a restyled mounting bracket, angled to allow more aesthetic integration onto columns. The OptiFlood range can be supplied as standard in two distinct finishes: in the 'raw' aluminium state or in ultra dark grey paint to match Philips' urban lighting ranges. Other RAL colours are available on request.

Ease of installation and maintenance

Access to the interior to be gained via the two stainless steel clips

The fully opening front face provides excellent access to all components

MINI 300 Stealth

MINI 300 Stealth – visual power

MINI 300 Stealth is a range of extremely efficient luminaires that can be used to illuminate large areas with direct and/or indirect light. Their high light output ratio is attributable to a patented white reflector coating, which offers up to 35% higher energy efficiency (W/m^2) than traditional lighting systems. Optimal lighting results are achieved thanks to the good balance of horizontal and vertical light levels combined with the white light and good colour rendering of the lamp.

MINI 300 Stealth is supplied with an asymmetric medium-beam, wide or narrow-beam reflector. It is also available with the road lighting POT optic, making it suitable for site perimeter, parking and open area lighting. The light source is shielded by a patented louvre system, minimising glare.

MINI 300 Stealth is suitable for pole (DGP333), ceiling (DWP333), wall (DVP333) or surface mounting.

Within the MINI 300 product family there is also a dedicated under canopy version (MINI 300 Cube), e.g. petrol stations.

For twin 'back to back' luminaire installation

For installation and lamp replacement, easy access is possible by opening the front frame, which holds the tempered front glass

MINI 300 Stealth	
Type	DWP333 (wall mounted)
Light source	HID: 1 x MASTER CosmoWhite CPO-TW / PGZ12 / 60, 90, 140 W 1 x MASTERColour CDM-T / G12 / 70, 150, 250 W 1 x MASTERColour CDM-TD / RX7s / 70, 150 W
Lamp included	Yes (K or light colour 728, 830 or 942)
Gear (integrated)	Electromagnetic (low loss), 240 V / 50 Hz Electronic, 220 - 240 V / 50 - 60 Hz: Electronic (EB)
Optic	Open CT-POT (OR) optic for CosmoPolis, CDO and SON lamps Asymmetrical, narrow beam (A-NB) Asymmetrical, medium beam (A-MB) Asymmetrical, wide beam (A-WB)
Optical cover	Glass
Ignitor	Semi-parallel (SP)
Options	Auxiliary lamp (AUX) for instant switch-on Hot-restrike (HR), for CDM-TD 150 W version only Special coating (SWP) to cope with chlorine environments (e.g. swimming pools) Frosted glass (dedicated for e.g. showrooms)
Materials and finishing	Housing and front frame: high-pressure die-cast aluminium Glass: thermally toughened, 3 mm thick (held by the front frame) Mounting bracket: high-pressure die-cast and extruded aluminium Clips: stainless steel Reflector: aluminium, specially coated

Colour	Silver (SI), black (BK), white (WH) or grey (GR) Other RAL colours available on request
Installation	Wall mounting Recommended mounting height: 4 - 8 m Suitable for direct and indirect lighting Cable entry via PG13.5 cable glands Ambient temperature outdoor: 35°C (25°C indoor) Drag factor (Cx): 1.20 Projected area in horizontal position: 0.20 m² Max. adjustment from the horizontal: 0°
Maintenance	Hinged front glass with quick-release clips for in-position lamp replacement No internal cleaning required
Accessories	Wall mounting bracket, ZWP333 MBW
Remarks	Humidity inside the luminaire is controlled via a 'gore' valve Suitable for 230 or 240 V operation by changing the tapping on the terminal block Delivered as standard with lamp, ballast and design bracket Dedicated versions available for pole mounting (DGP333) and flood lighting (DVP333)
Main applications	Urban and public areas, shopping malls, transportation hubs, various indoor applications

SNF100/300

SNF100/300 – general purpose floodlights

SNF100/300 are compact, sturdy, general purpose floodlights, which are particularly suited to small/medium scale area lighting. Their all-weather construction is designed for easy aiming, simple cleaning and speedy servicing.

High grade reflectors provide a highly efficient light beam. Wall, ceiling and surface mountings with wide ranges of adjustment offer directional versatility for both down and uplighting. Horizontal and vertical barndoor sets are available as accessories to shield the lamp from direct view, reduce glare and screen off spill light.

Lighting for petrol stations

Making your brand sparkle

Safety first – guidance and accident prevention

With petrol stations often being in isolated locations and having money-handling areas in the open, travellers stopping there at night need to feel safe. Many people feel anxious at petrol stations at night, perceiving them to be dark, intimidating places. Because our lighting solutions deliver high vertical lighting levels, this increases customers' sense of safety and comfort, as other people and the surroundings are easily visible regardless of the time of day. And if customers feel safe at one of your petrol stations, they are much more likely to be loyal to your brand and will come back, again and again.

Lighting design – building with light

Working in conjunction with the oil companies, Philips has developed a wide set of lighting schemes that are tailored to the respective companies' individual brand image. In doing so, we have drawn upon our extensive experience of lighting design specifically for petrol stations. The result? Dedicated schemes that offer enhanced branding, safety, comfort and efficiency.

Energy reduction

With the extremely high light output of their patented white coated reflector (97% reflectivity), Philips' Mini 300 systems allow customers to create lighting solutions with a 150 W CDM lamp instead of a 250 W HPI, or a 250 W CDM lamp instead of a 400 W HPI. This boosts energy efficiency by up to 35%.

www.philips.co.uk/lighting

Efficiency and sustainability

Cost of ownership and environment

With operating margins under constant pressure in the highly competitive petrol station market, the exceptional efficiency and reliability offered by Philips' robust, low-maintenance lighting solutions make a significant contribution to keeping lifetime costs down.

Our products are easy to install, highly energy efficient and easy to clean and maintain, delivering the very best results with the minimum amount of energy consumption and spill light. And as you are entitled to expect from a dedicated partner, our service delivery extends beyond the initial installation, throughout the life of the system.

Philips leads the field in terms of investing in energy saving, CO₂ reducing technologies and limiting the use of hazardous substances in its products. All Philips products are compliant with existing and upcoming norms on hazardous substances and energy consumption.

Thanks to our smart products and the LightMaster custom software tool, for example, we are able to calculate exactly the optimum moment for group lamp replacement, so that your station's safety, visual comfort, presentation, etc. – i.e. your overall branding – is not compromised. This advanced planning capability also means much lower maintenance costs.

Besides general lighting, we can help your signmaker optimise your signage with high performance lamps or LEDs.

Let us be your lighting partner in creating tomorrow's state-of-the-art petrol station.

More than 35% savings

Energy-saving luminaires from Philips

The extremely efficient Philips Mini300 makes it possible to use 150 W lamps instead of 250 W lamps.

Total cost of ownership

Energy costs account for most of the expense associated with a lighting system. Therefore they also represent the greatest opportunity to save money.

MINI 300 Cube

MINI 300 Cube – daylight impression

MINI 300 Cube is an extremely efficient low-glare luminaire specially designed for downlighting. The efficiency is achieved by a special optic coating, which reflects 97% of the light, and by the use of CDM-TD 4200 K lamps. The combination of this lamp and the white coated reflector creates an inviting atmosphere with colour rendering of 96. MINI 300 Cube delivers a uniform light distribution with an asymmetric or bi-directional beam creating outstanding illuminances in industrial and retail environments.

The range comprises versions for recessed (DBP300), surface mounted (DCP300) and post/wall mounted (DGP300). Within the MINI 300 product family there is also a dedicated floodlight version (MINI 300 Stealth).

MPF111/112

MPF111/112 – welcoming light

MPF111/112 are high efficiency, low-glare, recessed luminaires specially designed for downlighting under filling station or other canopies. They accommodate a metal halide lamp to create a welcoming atmosphere.

Matt aluminium reflectors ensure uniform light distribution with an asymmetrical beam (MPF111) or a symmetrical beam (MPF112). The beam patterns create excellent vertical illuminance, as required on vertically oriented objects like the sides of pumps and cars. An internal louvre restricts glare to a minimum for drivers or others approaching the area. The specially designed mounting frame allows quick and easy installation by one person.

www.philips.co.uk/lighting

MPF111/112

Type	MPF111 (asymmetrical beam version) MPF112 (symmetrical beam version)
Light source	HID: 1 x MASTER HPI-T Plus / E40 / 250, 400 W
Lamp included	Yes (K)
Gear (integrated)	Electro magnetic (low loss), 240 V / 50 Hz
Optic	Asymmetrical (A) Symmetrical (S)
Materials and finishing	Housing and louvre: galvanised steel Frame: pre-galvanised steel, white lacquered Glass: thermally hardened Gasket: silicone rubber Drop hinges: stainless-steel Mounting device: galvanised steel Reflector: high-grade anodised aluminium, matt

Colour	Frame: white, lacquered
Installation	Recessed ceiling mounting All versions equipped with mounting frame and mains supply cable of 210 cm
Maintenance	Front glass in hinged window with quick-release fasteners
Remarks	An internal louvre restricts glare to a minimum for drivers or others approaching the area The beam patterns create good vertical luminance
Main applications	Service stations, areas with overhead canopies

Safety and protection of luminaires

Approvals and standards

Luminaires sold in the market are expected to comply with the appropriate safety requirements as laid down in the European series of standards EN 60598 prepared by CENELEC, the European Committee for Electrotechnical Standardisation, and which are almost fully harmonised with the worldwide series of standards IEC 60598. European standards are accepted as the national standards and published as such.

Since the issuing of the Low Voltage Directive the availability of the appropriate safety standards has improved the overall quality of our luminaires. The European testing institutes, in cooperation with the European Luminaire Industry, introduced the ENEC mark in January 1993.

All luminaires supplied by Philips comply with the ENEC criteria and many indeed carry the ENEC mark to show the involvement of objective third parties. The CE mark, which is a condition for the free circulation on the entire European market of products that are safe, for example, is the way our organisation demonstrates its compliance with the relevant European legislation.

For more information on the European platform of Testing agencies, please consult their website www.EEPCA.org

Electrical supply

An important step has been taken to harmonise the European mains supply voltage. From 2003 onwards the voltage delivered for use in buildings is 230 V/400 V with a tolerance of $\pm 10\%$.

Philips luminaires are designed for the future and will operate well on the supply of today and tomorrow. An example is the electronic ballast designed for a rated mains voltage of 220-240 V, with tolerance for safety of $\pm 10\%$ and tolerances for performance of -8% and $+6\%$, covering the full range between 202 V and 254 V.

Electrical safety classes

Electrical equipment is classified according to the protection level against electrical shock. In normal operation as well as during service and maintenance, luminaires should be protected against electrical shock. The safety of a luminaire depends on electrical, mechanical and thermal aspects, both under normal and fault conditions. The electrical safety classification drawn up by the IEC embraces 3 luminaire classes: Class I, II and III. Low voltage luminaires designed to meet the Safety Extra-Low Voltage (SELV) limits can be categorised as Class III. The table gives a brief description of each electrical safety class. The official definitions are too long to be reproduced in full here, but can be summarised as printed below. If a protective earth connection is available, Class I luminaires are applied. However, if there is no earth connection or if eddy currents are present, Class II luminaires shall be applied. Class II water-protected luminaires are applied in wet and outdoor locations. Local electricity boards can provide the appropriate advice.

Class I - symbol

Luminaires in this class have basic insulation and are fitted with an earthing point (identified) for the connection of all those exposed metal parts that could conceivably become live in the presence of a fault.

Where the Class I luminaire is provided with a flexible power lead, it must include an earth wire.

Class II - symbol

Luminaires in this class are designed and constructed in such a way that exposed metal parts cannot become live. This can be achieved by means of either reinforced or double insulation, but without a provision for protective earthing.

Class III - symbol

The luminaires in this class are those in which protection against electric shock relies on supply at Safety Extra-Low Voltage (SELV), typically 12 V or 24 V, and in which voltages higher than those of SELV (50 V a.c. r.m.s.) are not generated. A Class III luminaire should not be fitted with a facility for protective earthing.

Ambient temperature

Philips luminaires are designed to meet the (environmental) conditions under which they are most likely to be used. The maximum ambient temperature T_a under which a luminaire can be operated safely, is indicated on the type label on the product; if no indication is given the product is intended for a maximum ambient temperature of 25°C . The ambient temperature always refers to the typical use of the luminaire: indoor or outdoor. Luminaires designed for industrial high-bay applications are designed for ambient temperatures as high as 40 to 45°C . The use of luminaires above their specified maximum ambient temperature may reduce safety margins and will mostly lead to a reduction of the lifetime of the various components. Electronic equipment, ballasts and lighting controls are particularly sensitive to overheating. Although (extremely) low temperatures do not normally affect the safety of luminaires, this may affect operation during the starting-up phase of the lamp. Fluorescent lamps should not be used below -5°C to -10°C . Upon request special solutions are often possible for higher or lower ambient temperatures. High-intensity discharge lamps function well below -20°C and are the most suitable lamps for outdoor use.

Protection against electrical shock		
Safety class	Symbol	Protection
I		Basic insulation plus protective earth connector
II		Double or reinforced insulation, no provision for protective earthing
III		Supply of safety extra-low voltage

Protection against ingress of solid objects, dust and moisture

The Ingress Protection system (IP) EN 60529, 1991 defines various degrees of protection against the ingress of foreign bodies, dust and moisture. The term 'foreign bodies' includes things like fingers and tools coming into contact with the electrical live parts of the product. Both safety aspects (contact with live parts) and harmful effects on the function of the luminaire are defined. The exact testing method for luminaires for each IP classification is described in the standard EN 60598, chapter 9. Some testing methods from EN 60529 were found to be inappropriate for luminaires and it must be noted that the specific conditions in an application may differ from the conditions during testing.

The designation to indicate the degree of protection consists of the characteristic letters IP followed by 2 digits indicating conformity with the conditions stated in the two tables. All Philips luminaires fulfil the minimum classification: IP20 (protected against finger contact with live parts), however a selection of luminaires, especially those for industrial and outdoor (road) applications, meet a higher IP classification. It is important to realise that the specification and safety of luminaires are only secured if the necessary maintenance is carried out according to the instructions of the manufacturer within the time schedules indicated.

Protection against ingress of dust, solid objects and moisture					
First number Degree of protection against accidental contact/contact with external elements			Second number: Degree of protection against ingress of moisture		
First number	Description	Explanation	Second number	Description	Explanation
0	Non-protected	Not protected	0	Non-protected	Not protected against moisture
1	Hand-protected	Protected against solid objects exceeding 50 mm in diameter	1	Drip-proof against vertical water drops	Water drips falling vertically shall have no harmful effect
2	Finger-protected	Protected against finger contact with live parts; and against solid objects exceeding 12 mm in diameter	2	Drip-proof when tilted at angles of up to 15°	Water drips shall have no harmful effect
3	Tool-protected	Protected against contact with live parts by tools, wire or similar objects over 2.5 mm thick; and protection against penetration of solid objects exceeding 2.5 mm in diameter	3	Rain-/spray-proof	Water falling at an angle of up to 60° shall have no harmful effect
4	Wire-protected	Protected against contact with live parts by tools, wire or similar objects over 1 mm thick; protection against penetration of solid objects exceeding 1 mm in diameter	4	Splash-proof	Splashing water from any direction shall have no harmful effect
5	Dust-accumulation-protected	Complete protection against contact with live parts and against harmful accumulation of dust; some dust may penetrate but not to the extent that operation is impaired	5	Jet-proof	Water projected by a nozzle from any direction shall have no harmful effect. (Nozzle diameter 6.3 mm, pressure 30 kPa)
6	Dust-penetration-protected	Complete protection against contact with live parts and against penetration of dust	6	Jet-proof	Water projected by a nozzle from any direction shall have no harmful effect. (Nozzle diameter 12.5 mm, pressure 100 kPa)
			7	Watertight	Watertight; temporary immersion in water under specified conditions of pressure and time possible without ingress of water in harmful quantities
			8	Pressure watertight	Pressure watertight; continuous submersion in water under specified conditions of pressure and time without ingress of water in harmful quantities

Protection against mechanical shock

The impact resistance of a luminaire defines the protection of the luminaire against mechanical shock. The European standard EN 50102 defines the degrees of protection against external mechanical impact (IK code) and the method of testing. The luminaire housing should withstand the defined energy of the mechanical shock without losing its electrical and mechanical safety, or the basic luminaire function. Translated into a more practical implementation, this means that after withstanding the shock, deformation of the mirror and housing

is allowed, although broken lamps, an unsafe electrical situation and failure to meet the specified IP classifications are not permitted.

The impact resistance is expressed as a group numeral, for instance IK06, which is related to the impact energy.

All types of Philips luminaires have a minimum impact resistance of 0.2 J. The table shows the ten IK classifications and the defined shock energy expressed in joules. Notice that fully vandal-proof luminaires are not available; vandal-protected (IK09) and vandal-resistant (IK10) are the best achievable classifications.

Protection against mechanical shock			
IK code	Shock energy (joules)	Description	Example
IK00	-		
IK01	0.15		
IK02	0.2	Standard	Standard open luminaire, closed luminaire with acrylic cover
IK03	0.3		
IK04	0.5	Standard plus	Open luminaire with reinforced optical system
IK05	0.7		
IK06	1		
IK07	2	Reinforced	
IK08	5	Vandal-protected	Closed luminaire with polycarbonate or hardened glass cover
IK09	10		
IK10	20	Vandal-resistant	Closed luminaire

Flammability

From the point of view of flammability of mounting materials, luminaires can always be mounted on non-flammable building materials like concrete and stone. If luminaires are to be mounted on flammable materials special measures should be taken. Luminaires for discharge lamps with no warning sign to indicate that they are unsuitable for mounting on normally flammable surfaces, are suitable for mounting on building surfaces that do not ignite below 200°C.

Ball impact resistance

For indoor sports halls ball-impact-resistant luminaires are essential. As no European standards have been developed for this purpose, Philips has classified the relevant luminaires according to the German DIN 18032. After the impact test according to this standard (36 handballs targeted at a speed of 60 km/h) no damage of the luminaire should have occurred and no loose particles should drop down from the luminaire. The symbol for a ball-impact-resistant luminaire is the football. Luminaires protected by a wire guard with a grid width exceeding 60 mm are not to be used in tennis sports halls.

Safety distance

In the application of reflector lamps and luminaires with narrow beam distributions of a high intensity, a minimum distance between light source and illuminated surface has to be ensured. This is to prevent too high temperatures of the illuminated surface. Minimum values for

Luminaire marking for flammability		
Symbol	Application	Characteristics of ceiling material
	Suitable for direct mounting on non-combustible surfaces	Stone, concrete
	Suitable for direct mounting on normally flammable surfaces	Ignition temperature materials > 200°C; some combustion time lag
	Suitable for direct mounting in/ on normally flammable surfaces where thermally insulating material may cover the luminaire	Ignition temperature materials > 200°C; some combustion time lag
	Suitable for direct mounting on easily flammable surfaces, where combustible dust is present	Ignition temperature materials < 200°C; no combustion time lag

safety distances are specified on the luminaire packing. The specified values must be considered as the shortest distances permitted between light source and illuminated object or surface to ensure long-lasting safe operation.

Gear types

Fluorescent and high-intensity discharge lamps require a device to limit the current due to the unfavourable current-voltage characteristics of the lamps. Traditionally this has been achieved using electromagnetic control gear in combination with either a glow-starter switch or an electronic starter. Almost the complete range of Philips fluorescent and high-intensity discharge lamp/luminaires are available with the electromagnetic type of ballast system. From the point of view of energy consumption the electromagnetic control gear system is less efficient because the losses in the system are relatively high, and significant improvements are possible by applying electronic control gear instead.

Electronic control gear offers a number of advantages in comparison with electromagnetic ballasts:

- The electronic ballast offers interesting cost savings, such as reduction in energy consumption of about 25%, extension of the lamp life up to 50% and, moreover, lower maintenance costs.
- Application of electronic ballasts adds to the comfort in numerous ways: no cathode flicker occurs; at the end of lamp life the lamp is automatically switched off; smooth and rapid starting is ensured without flickering; and no stroboscopic effects can arise due to the high frequency at which the lamps are operated.
- Extra safety is assured through over-voltage detection, protected control of the mains voltage input and a noticeably lower operating temperature.
- Flexibility is enhanced: installations with fluorescent lamps, for instance, are dimmable if a regulating ballast is selected, allowing for adjustment of lighting levels to personal preference and the opportunity for additional savings on energy, e.g. by daylight-linked lighting control.

Following the trend towards greater efficiency and comfort, some of the newer fluorescent lamps like all TL5 and high-wattage PL-L types will operate only on electronic control gear.

Electronic transformers

Philips offers high frequency electronic transformers for operation with 12V halogen lamps up to and including 150W. Electronic transformers are compact, lightweight and are also dimmable. They fully comply with the applicable safety and radiofrequency interference standards. Over conventional gear they offer self-resetting short-circuit protection, thermal-switch interruption for overload protection, temperature protection by output voltage reduction and inaudible operation. Electronic transformers produce a constant output voltage, ensuring long lamp life and a constant light level.

CELMA classification

The Federation of National Manufacturers' Associations for Luminaires and Electrotechnical Components for Luminaires in the European Union, CELMA, has created a guide for the application of Directive 2000/55/EC on energy efficiency requirements for ballasts

for fluorescent lighting. The Directive aims to reduce the energy consumption of ballasts for fluorescent lighting by moving gradually away from the less efficient ballasts towards more efficient ones. The degree of energy efficiency of fluorescent lighting circuits depends upon the combination of ballast and lamp. CELMA has developed a ballast classification system based on the ballast lamp system. This classification system defines ballast classes as listed in the following table. For further details refer to their website <http://www.celma.org>.

Ballast classification

Class	Typical ballast type
A1	Dimmable electronic ballasts (best energy performance)
A2	Electronic ballasts with reduced losses
A3	Electronic ballasts
B1	Magnetic ballasts with very low losses
B2	Magnetic ballasts with low losses
C	Magnetic ballasts with moderate losses
D	Magnetic ballasts with very high losses (lowest energy performance)

Fluorescent ballast types

Philips offers five options when it comes to selecting high-frequency ballasts for fluorescent lamps: HF-MATCHBOX designed for compact luminaires; HF-PERFORMER for areas where the demands are greater; HF-REGULATOR for areas where frequent dimming is required; HF-REGULATOR Touch and Dim for easy operation; and HF-DALI ballast working in accordance with the DALI Protocol. DALI stands for Digital Addressable Lighting Interface (IEC 929).

HF-DALI (HFD)

Electronic regulating ballast for TL5, PL-L and TL-D lamps.

The high-frequency regulating ballasts permit light output regulation down to 3% via the DALI control input.

HF-MATCHBOX (HFM)

Compact electronic ballast for the smaller (compact) fluorescent lamps up to 25 W. These high-frequency ballasts offer more freedom of luminaire design.

HF-REGULATOR (HFR)

Electronic regulating ballast for TL5, PL-L and TL-D lamps.

These high-frequency regulating ballasts permit light output regulation down to 3% of the maximum light output by the 1-10 V control input. Up to 60% reduction in energy consumption can be achieved by using automatic lighting control systems like Luxsense.

All Philips HF-Regulator ballasts are fitted with a dedicated integrated circuit (alpha-control) to ensure that lamp life is unaffected by the dimming level, that lamp operation is stable in every dimming setting and that energy savings are maximised when the lamp is dimmed.

HF-REGULATOR II TOUCH AND DALI (HFD-T)

The new-style electronic regulating ballast for TL5, PL-L and TL-D lamps. Standard push buttons can be used to dim the light output down to 3%. The lamp can also be switched on or off using the push-button control.

HF-PERFORMER (HFP)

Electronic ballast for TL5, PL-L and TL-D lamps.

These high-frequency ballasts offer low energy consumption. A warm-start circuit that preheats the lamp electrodes enables the lamp to be switched on and off without reducing its useful life.

HID ballast types

Philips supplies electronic control gear for metal halide and low- and high-pressure sodium lamps up to and including 150 W. They offer improved start-up performance and colour stability, and prevent lamp flicker. Compact, one-piece PrimaVision ballasts are available for (mini) CDM, CDO, SDW and SON lamps. For light regulation applications DynaVision ballasts are available for CDM, CDO and SON lamps and are equipped with 1-10V or DALI control input. Larger conventional ballasts for SON lamps of 250/400 W can be controlled by means of the DynaVision Controller with 1-10V and DALI control input.

DynaVision (EBR)

The compact DynaVision ballasts allow for light regulation down to 20% light output for SON lamps or 50% for CDO lamps.

Low-frequency electronic dimming and stable flicker-free operation will increase lamp life by between 20 and 30%. Full protection against fault conditions and a self-stopping facility prevent cycling of old lamps.

PrimaVision (EB)

The compact PrimaVision ballasts provide constant power regulation over a lamp life that is up to 30% longer. They eliminate lamp flicker, offer full protection against fault conditions, and a self-stopping facility, which prevents cycling of old lamps.

Further details, specifications and availability of ballast types for all kinds of lamp types can be found at <http://www.lampsandgear.philips.com>.

The principles of LED technology

The basis for light generation inside a Light Emitting Diode (LED), a solid-state semiconductor, is the conversion of electrical energy directly into light.

On its most basic level this can be seen as an electron that moves from one material into another while losing an amount of energy. Due to the law of conservation of energy, this loss of energy needs to be converted and, inside a LED, this energy is converted into radiation energy composed of light in the visible part of the spectrum, and a bit of infrared radiation dissipated as heat.

The LED is comprised of two semiconductor regions, a positive electrically charged or p-region and a negative electrically charged or n-region, see diagram 1. In the p-region there is a shortage of electrons and in the n-region a surplus of electrons. When voltage is applied across these two regions, current begins to flow and electrons move across the p-n junction, from the n-region into the p-region. The process of an electron moving through the p-n junction releases energy. The dispersion of this energy produces photons with visible wavelengths. The higher the energy released, the shorter the wavelength becomes. Low-energy photons will emit in the infrared part of the spectrum, and as the energy increases, the colour of the light will change from deep red, via yellow, green, cyan and blue to the ultra-violet part of the spectrum – in fact it follows the colours of the rainbow.

Diagram 1. LED composition with the electrically charged p- and n-regions and the p-n junction emitting light.

White light and RGB (red, green and blue)

A white LED consists of a blue LED chip and a yellow phosphor coating, see diagram 2. The blue photons generated in the semiconductor chip can either pass the phosphor layer unaffected, or be converted into yellow photons. These two colours – blue and yellow – combine to produce white light.

Diagram 2. White LED, the principle of white light generation.

It is also possible to generate white light with the aid of a red, green and blue LED. Such LED array systems are called RGB systems. Normally the RGB systems are used to make different colour effects. With a RGB system all colours of light within the colour triangle can be produced.

Graph. Colour triangle for a RGB system; all colours within the triangle can be reproduced.

Characteristics and benefits

On the next page you will find an overview of the characteristics and benefits of LEDs. In the various indoor and outdoor applications different advantages will be important. Architectural applications will use the vivid colours and dynamic colour control, whereas the traffic signal market is focused on maximising energy savings and reducing maintenance costs to practically zero.

In general:

- More energy-efficient than halogen lamps
- Much longer life, up to 50 000 hours at 70 per cent of lumen maintenance
- Reduced maintenance cost
- No unwanted IR or UV radiation in the beam of light, less risk of fading of colour pigments and textile
- Highly efficient low-cost plastic optics can be used

Architecture/design:

- Design flexibility, hidden compact light sources
- Vivid saturated colours without the use of additional filters
- Directed light for increased system efficacy
- Robust, vibration-proof, solid-state lighting
- Less light pollution due to precise optical control

Unique LED advantages:

- Dynamic colour control, white point adjustable
- Fully dimmable without colour variation
- Instant switch-on at full colour and full lighting level
- No transmission loss due to colour filters
- Instal and forget for a long time

Environment:

- No hazardous metals e.g. mercury in the light source

Safety and low temperature:

- Low voltage dc operation
- Highly efficient in cold environment
- Cold start capability down to -40°C
- Sealed for life waterproof luminaires

Value chain

The definition of levels of integration describes the road from LED chip to luminaire, with increasing complexity and value. Philips undertakes business activities at all levels of the value chain.

Level 0. LED chip

Semiconductor chips are the basis for every LED and these are grown in complex wafer production equipment. The wavelength of the LED is defined according to the manufacturing process, the parameters and the tolerance.

Level 1. LED component

Packaging is the next step. Here the thermal and optical properties are determined and the chip is connected to its package by means of bond wires for external connections.

Level 2. LED array

A miniature printed circuit board is used to connect one or more LEDs, possibly together with driver electronics, and acts as a thermal interface between LEDs and heat sink.

Level 3. LED module

A LED module combines heat sink, optics and separate driver in one module, ready to be installed in a luminaire.

A mono-colour traffic light source is an example of level 3. Three of these modules will be combined in a level-4 traffic signal head.

Level 4. LED luminaire

A LED luminaire can be connected directly to the outside, mechanically and electrically. It houses, supplies power to and protects the LED array(s) from the environment while maintaining optimal operating conditions.

Philips LEDline is an example of a level-4 product.

				
Level 0	Level 1	Level 2	Level 3	Level 4
LED-Chip	LED or lamp	LED's on PCB	LED module with optics and driver	Luminaire

Table. Survey of levels of integration and LED products.

LED lighting system

A LED lighting system comprises several components like a power supply, controller, control interface and luminaire/LED arrays/optics. In many cases one or more components are combined in one product for ease of installation. In other cases there might be a need for more flexibility in terms of system configuration and control. E.g. a power supply or control interface may be shared by a group of luminaires. Every single component is selected to fit the application demands.

Lighting controls

The revolution of LED technology for lighting creates new possibilities in the application of lighting. In many applications the dynamic character of LED enables a lighting solution to create a unique experience. By using RGB colours or variation in colour temperature, all sorts of effects are made possible and can be specified for a particular lighting design or application, both indoor and outdoor. To enable these dynamic lighting solutions there is a need for lighting control systems that create the right experience for the customer. Philips provides a range of smart scene-setting lighting controllers that offers a reliable solution for any project, from simple colour selection at the push of a button or the turn of a wheel to fully automated, pre-programmed light control and/or multimedia integration.

Colour characteristics of lamps

Lamps do not all emit light of the same colour. There is, for example, a striking difference between the pronounced amber light from standard sodium lamps and the white light from most other lamps. Even then, one white light is not the same as another. To select the right light source for the colour characteristics required, two separate parameters have to be considered, i.e. the colour temperature of the emitted light and its colour rendering.

Colour temperature

Given that the colour of the light has an important influence on the colour impression of the area, the colour temperature of the light source plays an essential role. To enable an objective comparison of the colour impressions from various sources, subjective terms such as the popular words 'cool' and 'warm' are inadequate. A precise scale is required and given by the term 'correlated colour temperature'; the colour gradation of the light is compared with the light emitted by an intensely heated iron bar of which the temperature is known. In this way, the light colour can be specified by a value in kelvin (K). A low colour temperature represents warm, yellow, orange or red light and a high colour temperature cool, blue or violet light.

Four categories, as a practical guideline, are:

2000 - 3000 K warm/cosy

The colour from (compact) fluorescent lamps in the colours 827 and 927 and the SDW-T White SON lamp. Generally used for intimate and cosy environments where the emphasis is on a peaceful relaxing ambience.

3000 - 4000 K warm/neutral

The colour from halogen lamps, colour 830 and 930 (compact) fluorescent lamps and MASTERColour 830 lamps. Used in places where people are active, requiring a welcoming comfortable ambience.

4000 - 5000 K neutral/cool

The light colour from 840 and 940 fluorescent lamps as well as MASTERColour 942 and MHN metal halide lamps. Usually applied in commercial areas and offices where a look of cool efficiency is desired.

5000 K and above daylight and cool daylight

The light colour that best matches natural daylight, such as fluorescent colours 850, 865, 950 and 965 and the new ActiViva colours 451 and 452.

Colour rendering

The perception of surface colours, the colour rendering of the light, depends on the colour content of the incident light. The light emitted by a light source is composed of a mixture of colours, all in different intensities. A change in the colour mixture and intensity yields a different colour rendering.

Cool daylight and incandescent lamps have fully natural colour

rendering properties. The same is true for halogen lamps. The reason for this is the continuous spectrum of the sources, which is typical for filament lamps.

Most gas discharge sources, however, have an interrupted or line spectrum. This has an influence on the quality of their colour rendering properties, which vary from very poor, with SOX low-pressure sodium gas discharge lamps, to excellent, with the colour 90 De Luxe series fluorescent and MASTERColour 942 lamps.

When selecting a particular lamp type, a clear understanding of the colour rendering properties is essential. A fair indication is given by the colour rendering index (CRI), which is a standardised scale with 100 as the maximum value. Colours are best shown under a light source with the highest colour rendering index. Incidentally, it is only worthwhile to compare CRI values of lamps of similar colour temperature.

In practice, three colour rendering categories are normally found.

CRI between Ra 90 and 100.

Excellent colour rendering properties.

Applications are mainly those where correct colour appraisal is a critical task.

CRI between Ra 80 and 90.

Good colour rendering properties.

Applications in areas where critical colour appraisal is not the primary consideration but where good rendition of colours is essential.

CRI below Ra 80.

Moderate to poor colour rendering properties.

Applications in areas where the quality of colour rendering is of minor importance.

The choice in favour of a particular colour rendering class does, of course, depend on the demands that an application makes on a lamp. For example, a CRI of Ra 60 is inadequate for shop lighting, but is qualified as good for functional road lighting.

Colour impression		
Light colour	Colour temperature in kelvin	Type of lamp or lamp colour *
Cool daylight	17000	452
	8000	451
	6500	865, 965
Daylight	6000	
Cool white	5000	850, 950
	4500	HPI (-T) Plus
	4200	942, HPL-N, MHN
Neutral white	4000	840, 940
	3500	
	3400	HPL Comfort
"Crisp"	3000	Halogen 12V, 830, 930
warm white	2900	Halogen Plusline
	2800	Halogen PAR
	2700	827, 927
"Cosy" warm white	2500	SDW-T
	2150	SON Comfort
Very warm white	2000K	SON PIA Plus

*= For exact colour temperature figures refer to the lamp family data.

Colour rendering		
Indoor applications	CRI	Type of lamp or lamp colour *
Excellent	100	Halogen 12V, 230V
	92	927, 930, 940, 950, 965
	90	CDM 942
Good	83	SDW-T
	82	451, 452, 827, 830, 840, 850, 865
	80	CDM 830, SDW-T, MHN, QL
Moderate	75	54
	70	25
	69	HPI (-T) Plus
	65	SON Comfort
	60	33
	55	35, HPL Comfort
Insufficient	50	29
Poor	45	HPL-N
	40	SON Plus
	25	SON

*= For exact colour rendering index figures refer to the lamp family data.

Areas of application

Correct light impressions and correct rendering of colours assists us in recognising our surroundings. The colour climate of an artificially-lit space is determined by light colour temperature and colour rendering.

Room furnishings of wood and fabrics in warm colours require warm lighting in the colours 827 or 927. For pleasing light the colours 830 and 930 are most suitable for many applications. The more business-like the interiors are, the cooler the light can be. Furniture using chromium, glass and marble, or in black and white, is emphasised by the neutral light colours 840 and 940. Colours 865 and 965 are best used in environments where there is a high daylight content.

For (compact) fluorescent lamps it is most economical to choose the colours 830 and 840 as they produce the highest light output.

Colours 927, 930, 940 and 950, on the other hand, give the best colour rendering.

Lamp type	Philips Product- Identification Code (PRID)	Commercial product name	Colour temp.Tc	Colour rend. Ra (cd)	Luminous flux (lm)/intensity	Wattage incl. gear

London, United Kingdom

Average illuminance

Illuminance averaged over a specified surface.

Unit: lux (lx) = lm/m²

Symbol: E_{av}

Ballast

Electrical device used with discharge lamps for stabilising the current in the discharge.

Beam spread

Angle in the plane through the beam axis over which the luminous intensity drops to a stated percentage (e.g. 50%) of its peak intensity.

Brightness

Attribute of visual sensation according to which an area appears to emit more or less light. Brightness according to the definition is also an attribute of colour. In British recommendations the term “brightness” is now reserved for descriptions of colour. Luminosity should be used in other instances.

Candela

The standard unit of light intensity, abbreviated to “cd”, which is one lumen per steradian.

CDM

See MASTERColour CDM.

Colour appearance

General expression for the colour impression received when looking at a light source.

Colour change

The facility to change the colour temperature of a lighting installation makes it possible to create a more comfortable working environment or to introduce dynamic lighting effects.

Colour rendering

Ability of a light source to render colours naturally, without distorting the hues seen under a full spectrum radiator (like daylight lamps).

The colour rendering index (CRI) ranges from 0 to 100.

For further details see ‘Specification data lamps’.

Colour rendering index CRI

See Colour rendering.

Symbol: R_a

Colour temperature

Temperature in kelvin of a full spectrum radiator most closely approximate to the colour appearance of a light source at the same brightness. For further details of Philips lamps see under ‘Specification data lamps’.

Unit: kelvin, K

Symbol: T_c

Contrast C (between two parts of a visual field)

The relevant luminance difference between two parts in accordance with the formula:

$$C = \frac{L1 - L2}{L2}$$

Where the size of the two parts differs greatly and where:

L1 = luminance of the smallest part (object)

L2 = luminance of the largest part (background).

DALI

Digital Addressable Lighting Interface, a standardised communication interface to regulate lighting levels and to switch electronic HFD ballasts on and off.

Daylight linking

Using natural light saves energy and is beneficial to individual users. Daylight linking is a technique that regulates the light output of luminaires in accordance with daylight conditions, thus maintaining a constant level of indoor lighting and ensuring comfort at all times.

Diffuser

Optical element used to mix light rays to improve uniformity or reduce glare. An opal cover is an example of a diffuser.

Direct lighting

Lighting by means of luminaires with a light distribution such that 90 – 100% of the emitted luminous flux reaches the working plane directly, assuming that this plane is unbounded.

Disability glare

Glare that impairs vision.

Discharge lamp

Lamp in which the light is produced, directly or indirectly, by an electric discharge through a gas, a metal vapour, or a mixture of several gases and vapours.

Discomfort glare

Glare that causes discomfort without necessarily impairing vision.

Driver stopping distance

The total distance travelled while a vehicle is being brought to rest, measured from the position of the vehicle at the instant the driver has an opportunity to perceive that he should stop his vehicle.

Dust-proof luminaire

Luminaire constructed so that dust of a specified nature and fineness cannot enter when it is used in a dust-laden atmosphere.

Emergency lighting

Lighting provided for use when the supply to the normal lighting fails.

EOC

European Ordering Code.

Escape lighting

That part of emergency lighting provided to ensure that an escape route can be effectively identified and used in the case of failure of the normal lighting system.

Flashed area

Of a luminaire in a given direction. The area of the orthogonal projection of the luminous surface on a plane perpendicular to the specified direction.

Fresnel lens or reflector

A Fresnel lens or reflector is an optical element of reduced height. By means of discrete steps, the basic shape is flattened yet the optical characteristics are retained.

Glare

Condition of vision in which there is discomfort or a reduction in the ability to see significant objects, or both, due to an unsuitable distribution or range of luminance or to extreme contrast in space or time.

Halogen lamp

Lamp in which the inclusion of halogens in the gas filling and a high-temperature quartz envelope promote the tungsten halogen cycle, permitting a higher filament temperature. The result is a higher colour temperature and a significantly extended life.

Halogen HV

"High voltage" 230 V halogen lamp, which does not require a ballast or a transformer.

Halogen LV

"Low voltage" 6 V, 12 V or 24 V halogen lamp. An electronic or electromagnetic transformer is required to operate low-voltage halogen lamps and is often integrated into the luminaire.

HFD

Electronic regulating ballast which enables the light to be dimmed. Ballast functions according to the DALI protocol.

HFD-T

Electronic regulating DALI ballast for various fluorescent lamps. With this new-style electronic ballast standard push-buttons can be used to dim the light output down to 3%. The lamp can also be switched on or off using the push-button control.

Ballast functions according to the DALI protocol. HFM

Compactly built electronic ballast for various compact fluorescent lamp types. See also 'Specification data luminaires'.

HFP

Electronic ballast for various fluorescent lamp types with warm-start principle. See also 'Specification data luminaires'.

HFR

Electronic regulating ballast for various fluorescent lamp types by which light dimming is possible. The main ranges of HFR ballasts allow step-less dimming down to 3%. See also 'Specification data luminaires'.

Horizontal illuminance (E_{hor})

Illuminance incident on the horizontal surface.

Unit: lux (lx) = lm/m²

Symbol: E_{hor}

HPI Plus lamp

Metal-halide high-intensity discharge lamp combining high luminous efficacy with white light of moderate colour rendering. Main indoor applications are big industrial halls and lighting of discount stores, hyper-/supermarkets and DIY shops. HPI Plus lamps are usually applied in high-bay luminaires and floodlights.

Illuminance

The luminous flux density at the surface being lit. The illuminance in the full summer sun is approx. 100 000 lux. Recommended illuminances for work places range from 200 lux for rough work to 2000 lux for detailed or critical work.

Unit: lux (lx) = lm/m²

Symbol: E

Incandescent lamp

Lamp in which light is produced by means of an element heated to incandescence by the passage of an electric current.

Indirect lighting

Lighting by means of luminaires with a light distribution such that not more than 10 per cent of the emitted luminous flux reaches the working plane directly, assuming that this plane is unbounded.

Induction lighting QL

Electrode-less induction lighting system characterised by good light quality, high luminous efficacy and a phenomenal life (60 000 hours).

Infrared remote control

In offices and meeting rooms where the lighting requirement changes frequently, wireless infrared control offers the flexibility to set the lighting and change it at any time.

Isocandela curve (diagram)

Curve traced on an imaginary sphere with the source at its centre and joining all adjacent points corresponding to those directions in which the luminous intensity is the same, or a plane projection of this curve.

Isolux curve (diagram)

Locus of points on a surface where the illuminance has the same value.

Jet-proof luminaire

Luminaire constructed to withstand a direct jet of water from any direction.

LED

Light Emitting Diode used as a light source. Solid-state semiconductor device that converts electrical energy directly into light of a specific colour or white light.

Light output ratio (LOR)

Ratio of the total light emitted by a luminaire to the total light output of the lamp(s) it contains measured at standard operating conditions.

Low-pressure sodium lamp

Sodium vapour lamp in which the partial pressure of the vapour during operation does not exceed 5 Pa – for example: a SOX lamp.

Lumen depreciation

The decline in the light output of a light source during its lifetime.

Luminaire

Appliance that distributes, filters or transforms the light given by a light source (LED or lamp), and which contains all the necessary elements for fixing and protecting the light source(s) and facilitates their power supply and operating conditions.

Luminance

The light intensity per square metre of apparent area of the light source, luminaire or illuminated surface. Where surfaces are lit, the luminance depends upon both lighting level and reflection characteristics of the luminous surface.

Unit: cd/m²

Symbol: L

Luminous efficacy

The quantity of light that a light source emits per unit of electrical energy consumed. Notice that the luminous efficacy can be specified for a light source or for a lighting system (lamp and ballast).

The luminous efficacy of a system is lower than that of the light source.

Unit: lm/W

Luminous flux

The total light output emitted by a light source. Also the total light falling on a surface. The light output of a light source is measured in lumen.

Unit: lumen

Symbol: ϕ

Luminous intensity

The luminous flux in a given direction, e.g. from a floodlight or projector.

Unit: candela (cd) = one lumen per steradian

Symbol: I

Luminous intensity distribution diagram (table)

Luminous intensity shown in the form of a polar diagram, cartesian diagram or table, in terms of candelas per 1 000 lumens of lamp flux. The diagram (table) for non-symmetrical light distributions gives the light distribution of a luminaire in at least two planes:

1. In a vertical plane through the longitudinal axis of the luminaire,
2. In a plane at right angles to that axis.

Note: The luminous intensity diagram (table) can be used:

- a. To provide a rough idea of the light distribution of the luminaire,
- b. For the calculation of illuminance values at a point,
- c. For the calculation of the luminance distribution of the luminaire.

Lux

The standard unit of illuminance of a surface being lit. One lux equals one lumen per square metre.

Maintained emergency lighting

Emergency lighting where the lamps are operated from the normal supply during standard conditions. In an emergency situation the emergency lamp (usually one lamp in luminaires of two or more lamps) remains in operation.

Maintained illuminance (luminance)

Value below which the average illuminance on the specified surface is not allowed to fall. The maintained illuminance is specified at the end of the maintenance cycle, taking into consideration the maintenance factor.

It is one of the main specification elements for the lighting designer. In the various standards the maintained illuminance is specified for various activities.

Unit: lux

Symbol: E_m , L_m

Maintenance factor

Correction factor used in lighting design to compensate for the rate of lumen depreciation, caused by lamp ageing (lumen depreciation and lamp failure) and dirt accumulation (luminaire and environment).

It determines the maintenance cycle needed to ensure that illuminance does not fall below the maintained value.

MASTERColour CDM lamp

Series of metal-halide discharge lamps with excellent colour rendering and a warm or neutral colour impression. MASTERColour lamps, also available as reflector lamps, are applied in projectors and downlights for shop and office applications.

Mercury lamp

High-intensity discharge lamp for use in industry and large public spaces. Higher quality light characteristics are obtained by applying metal-halide lamps.

Metal-halide lamp

Single- or double-ended discharge lamp for use in industry, public spaces and shops. Metal-halide lamps combine a natural white colour with a pleasant light and a high luminous intensity.

Movement detection

Sensing of occupancy by movement detection ensures lights are activated only when needed and enables the lighting in a specific area to be controlled.

Non-maintained emergency lighting

Emergency lighting where the emergency lighting lamps come into operation only when the power supply to normal lighting fails.

Obtrusive light

Spill light which because of quantitative, directional and spectral attributes in a given context, gives rise to annoyance, discomfort, distraction or a reduction in the ability to see essential information.

OLC

Omnidirectional Lighting Control, a Philips-patented series of optics for TL5 and TL-D lamps offering optimal lighting efficiency in combination with excellent glare and luminance control all around the luminaire.

Optic

A device that changes the direction of a beam of light, usually by reflection, diffusion or refraction by a lens. The optic may include louvres for reduction of glare.

PL lamp

Single-ended compact fluorescent lamp in which the discharge tube is folded into two, four or six limbs. PL lamps are characterised by unusually high light output for their length. They are applied in compact luminaires for professional and domestic use. Also available with integrated ballast.

Power factor

Ratio of the circuit power in watts over the product of the root-mean-square values of voltage and current. For sinusoidal waveforms, it is equal to the cosine of the angle of phase difference between voltage and current. For electronic ballasts the power factor is 0.95 so that no additional phase compensation is required.

QL lamp

See Induction lighting. Refractor

Optical element used to concentrate light rays to focus or improve the direction of light. A prismatic cover is an example of a refractor.

RGB

Red, green and blue, used to specify the colours of a light source.

SDW-T

White SON or SDW-T lamps offer a high luminous efficacy in combination with warm-white light. The colour rendering is excellent. SDW-T lamps are applied in shops and public spaces where the atmosphere should be warm and cosy.

Sky glow

The brightening of the night sky that results from the reflection of radiation (visible and non-visible), scattered from the constituents of the atmosphere (gas molecules, aerosols and particulate matter), in the direction of observation. It comprises two separate components as follows:

- Natural sky glow: That part of the sky glow which is attributable to radiation from celestial sources and luminescent processes in the earth's upper atmosphere.
- Man-made sky glow: That part of the sky glow which is attributable to man-made sources of radiation (e.g. outdoor electric lighting), including radiation that is emitted directly upwards and radiation that is reflected from the surface of the earth.

Sodium lamp, SON lamp

High-pressure discharge lamp with a yellowish colour appearance and an extremely high efficiency. SON and SON Comfort lamps, with improved colour characteristics, are mainly applied in high-bay industrial applications.

Solid-state lighting

Description of a lighting device that does not contain moving parts or parts that can break, rupture, shatter, leak or contaminate the environment (such as a lamp).

Spill light (stray light)

Light emitted by a lighting installation which falls outside the boundaries of the site for which the lighting installation is designed.

Starter

Device for starting a discharge lamp, in particular a fluorescent lamp, that preheats the electrodes and/or causes a voltage surge in combination with the series ballast.

Switching and dimming control

As more and more light sources can be dimmed economically, lighting controls need to provide both switching and light regulating capabilities.

TL5

Linear double-ended fluorescent lamp with a diameter of 16 mm. In combination with OLC optics and high-frequency ballasts the TL5 system offers a superb performance, both in terms of lighting technology and energy consumption.

TL-D

Linear double-ended fluorescent lamp with a diameter of 26 mm. Available in a range of colours and colour rendering characteristics.

Threshold increment (TI)

The measure of disability glare expressed as the percentage increase in the contrast required between an object and its background for it to be seen equally well with a source of glare present.

Note: Higher values of TI correspond to greater disability glare.

Uniformity ratio

Ratio of the minimum over the average illuminance for a specified area (E_{\min}/E_{ave}). When defined as such, the uniformity ratio is also the ratio of the minimum over the maximum illuminance for a specified surface area (E_{\min}/E_{\max}).

Utilisation factor

Utilisation factor (UF) of a lighting installation represents the percentage of the luminous flux of the lamp(s) that reaches the defined working plane. UF can be seen as the efficiency of the lighting installation. UF is used to calculate the number of luminaires required.

Vertical illuminance

Illuminance incident on the vertical surface.

Unit: lux (lx) = lm/m²

Symbol: E_{vert}

Visual guidance

The sum of the measures taken to give the user of a space an unambiguous and immediately recognisable picture of the course of the path ahead. Visual guidance is important in shops and other public buildings. The lighting designer takes the demands for visual guidance into consideration.
