

Plumb® Table of Contents

The Plumb® brand name has been famous among craftsman since 1856 and was acquired by Cooper Tools in 1980. The extensive offering of beautifully balanced striking tools includes standard and specialty hammers, sledges, wedges, axes and hatchets.

Contents

Quality striking tools – introduction
Fiberglass claw hammers
Tubular and solid steel claw hammers
Hickory handled claw hammers
Ball pein hammers
Soft faced holders, hammers, and faces
Tradesmen's hammers
Heavy hammers
Bars
Sledges
Axes
Hatchets
Rehandling kits
Wood chisels
Nail sets

Safety tips

Hand tools are made in various types and sizes, degrees of hardness and different configurations for specific purposes. They should be carefully selected and used only for their intended purpose. Proper use of most types involves certain basic rules:

- Protect your eyes – always wear safety goggles.
- Strike squarely – avoid glancing blows.
- Always use a tool of suitable size and weight for the job.
- The striking face of a hammer should be approximately 3/8" larger in diameter than the struck face of a chisel, punch, etc.
- Replace immediately upon chipping or mushrooming of the face.
- Never use a tool with a loose or damaged handle.
- Never use a grinding wheel for redressing a cutting edge or a striking face, use a file or whetstone and redress to original shape and contour.
- Never use a hammer, maul, or axe to strike another hammer, maul or axe.
- Never use a tool with a dull cutting edge.

Quality Striking Tools

Since 1856 the quality of Plumb® tools has been recognized and preferred by tool users throughout the world. The special analysis steel used to make Plumb® tools is forged to close tolerance and heat treated to build in the toughness necessary to withstand impact. Extra care is then taken in hardening and tempering to make each part of the tool ready for the specific job it has to do.

You can be sure Plumb® tools have the toughness, durability and keenness to do the job. Plumb® tools are engineered for balance and exacting care is taken to assure the head is "hung" on the handle at the right angle. This built-in balance gives Plumb® tools extra driving power. They swing easy – hit hard.

Permabond® Chemical Bonding Process

Permabond® is a red-colored chemical weld used in Plumb® tool eyes to join head and handle together. Chemical bonding process replaces conventional wedging which splits wood, allowing moisture to swell and shrink the handle and eventually loosen the head. Permabond® chemical bonding process seals moisture out, forming a bond so tight it takes approximately 2 tons of pressure to pull it apart. Permabond® chemical bonding process is used on all nail hammers, except one-piece hammers, and is a visible plus with homeowners and tradesmen.

Nail Hammers

- Face radius and chamfer are designed to provide a hard striking face.
- Mid-section is resilient, yet extra strong.
- Claws are tough, sturdy; edges are beveled, with uniform taper and bite.
- With proper use, safety is enhanced by the double tempering process for the striking face and claw.

Nail hammers are made in two patterns; curved claw and straight or ripping claw. The face is slightly crowned with the edges beveled, although certain heavy-duty patterns may have checkered faces designed to reduce glancing blows and flying nails. Handles may be wood, solid steel, or fiberglass. Solid steel and fiberglass are generally furnished with rubber-type grips.

Handles

For many good reasons, the traditional choice of material for a striking tool handle is North American red hickory. It looks good and it naturally feels good. The continuous fibers of this fine stock give great resilience and strength while minimizing impact shock. Man-made materials have their advantages, too. Plumb® developed and introduced the fiberglass handle in 1955. It can't rust, rot or corrode, and despite its light weight, it has astonishing strength. Plumb® introduced a new jacketed fiberglass and nylon handle in 1997. Tests on a Tinius-Olsen testing machine have shown that with more than 450lbs of applied load, a Plumb® fiberglass handle won't break. With its smart looking, resilient, black or orange cushion grip fitted to its fiberglass handle, this line has the look of a winner. The latest material used in Plumb® hammers is solid steel. These hammers are solid steel throughout, with cushion grip handle, textured for positive hold, and colored hard-to-lose red. The head will never come off and the hammer is well balanced to give extra power with less fatigue.

Nail Hammer Warning

Warning - Wear Safety Goggles - User and Bystander

Nail hammers are designed for driving and pulling common, unhardened nails only, and for ripping apart wooden structures. Never strike one hammer with or against another hammer or other hardened objects as the face may chip, possibly resulting in eye or other serious injury. Replace any tool immediately upon chipping, mushrooming or other damage.

Premium Curved Claw

- High-luster, full-polished finish
- Octagon-shaped neck
- Virtually unbreakable fiberglass handle: solid fiberglass core covered with a molded nylon jacket to resist breakage due to overstrike
- Contoured handle for increased comfort and reduced fatigue
- Enlarged handle base for butting material
- New grip material reduces handle slickness
- Factory balanced for maximum striking power
- Permabond® construction between head and handle
- 11410 is a plain-pole English style nail hammer

Ball Pein Warning

Warning - Wear Safety Goggles - User and Bystander

Ball pein hammers of the proper size are designed for striking chisels and punches, and for riveting, shaping and straightening unhardened metal. The striking face should have a diameter at least 3/8" larger than the struck face of the tool. Never strike one hammer with or against another hammer or other hardened objects as chipping may occur, possibly resulting in eye or other serious injury. Replace any tool immediately upon chipping, mushrooming or other damage.

Ball Pein Hammers - Fiberglass

- Rust-resistant, forged black head with polished poles and peins

Soft-Face Holders

For Industrial Use

- Soft-face holder with handle; faces are sold separately (see page 259)
- Solid fiberglass handle for long service life, outlasts wood handles 10 to 1
- Comfortable grip design reduces fatigue
- Replace tips rather than the entire hammer; more value for the user
- Plumb offers a wide variety of soft-face tips for multiple uses
- Industrial users include aerospace, aircraft manufacturing, automotive maintenance and assembly, petrochemical facilities, nuclear sites, hazardous materials processing and remediation, marine and shipbuilding, metalworking and machining, electronics assembly

Soft Face Selection Guide

Description	Color	Replaces
Soft	Brown	Rubber, wood, soft lead, soft brass, babb
Medium	Red	Rawhide, wood, soft plastics (pvc, vinyl), lead alloy
Tough	Green	Rawhide, hardwood, medium hard plastics (urethane)
Med. Hard	Cream	Rawhide, hardwood, aluminum, copper, hard brass, hard lead alloys
Hard	Black	Rawhide, hard plastics (acrylics, nylons, polymers)
Extra Hard	Yellow	Rawhide, bronze

Dead Blow Hammers

- Shot-loaded interior cavities to absorb impact, reduce bounce
- Solid fiberglass handle for long service life, outlasts wood handles 10 to 1
- Comfortable grip design reduces fatigue
- Non-marring, non-sparking hammer material
- Plumb Dead Blow hammer produces 40% more driving force than conventional hammers
- Specially engineered striking face material for long service life and high performance
- Industrial users include aerospace, aircraft manufacturing, automotive maintenance and assembly, petrochemical facilities, nuclear sites, hazardous materials processing and remediation, marine and shipbuilding, metalworking and machining, electronics assembly

Brick Hammer Warning

Warning - Wear Safety Goggles - User and Bystander

Brickhammers are designed for setting and cutting (splitting) bricks, masonry tile and concrete blocks. Never strike one hammer with or against another hammer or other hardened objects as chipping may occur, possibly resulting in eye or other serious injury. Replace any tool immediately upon chipping, mushrooming or other damage.

Fiberglass Brick Hammers

- Forged head
- Polished face, chamfer, bit, back and sides
- Fiberglass handle with comfortable cushion grip
- PermaBond® construction between head and handle
- 1 1/8"- wide bit on 24oz.
- 1 1/16"- wide bit on 15oz.

Axes and Hatchets Warnings

SB Michigan

SB Jersey

DB Michigan

Plumb provides a wide variety of axes and hatchets to suit personal preferences and usage. The large axe heads come in a choice of seven patterns. The finish is either a full-polished head and bit, or a painted, rust-resistant head with a polished bit. Only high-quality, hardened, tempered forged steel is used throughout our axes. Smaller axe heads and hatchets reflect the many uses to which this handy and versatile tool can be put. This is a specialist's field, where the customers know what they want... and they get it from Plumb®.

Warning - Wear Safety Goggles - User and Bystander

The striking face is designed for general blacksmith work in striking unhardened metal. The peins are used for shaping and bending unhardened metal. Never strike one hammer with or against another hammer or other hardened objects as chipping may occur, resulting in eye or other serious injury. Replace any tool immediately upon chipping, mushrooming or other damage.

All American - Dreadnaught

Curved Handle

- Forged steel heads. Tough, matte black finish
- Tempered and hardened bits retain their sharp cutting edge
- Hickory handle wood wedged for easy handle replacement

- Notes:**
1. Handle lengths could vary slightly from nominal.
 2. Only Plumb replacement handles should be used for Plumb products.
 3. Fiberglass and tubular steel handle replacement kits are not available. Comparable wood handle kits may be used as substitutes where applicable.
 4. Wood handle kits are not available for the following items: 11491, 11492, 11494, 11495, 11634, and Dead Blow holders.
 5. Adze Eye Kits are available for 11523, 11524, 11525, 11527, 11528, and 11529

Plumb Professional Wood Chisels

- Large cellulose acetate handle for impact resistance and durability
- Steel strike plate on handle resists handle "mushrooming" and resists breakage
- One-piece forged high carbon tool steel for extra strength and durability, retains sharp cutting edge longer
- Polished blade is ground and honed to extreme sharpness for crisp cuts
- Beveled edges for clean and precise cuts
- Tapered blade for comfort and balance
- 2-zone heat treated tool steel for maximum blade strength and longer edge retention
