QTS AN-X Logix Ethernet/IP Bridge Products

AN-X™ (Automation Network X-change) is a family of **migration** products designed by **Quest Technical Solutions**, a Rockwell Encompass Partner, as a flexible platform for controlling and monitoring **Legacy automation networks** from Ethernet/IP PLCs (**ControlLogix, CompactLogix, MicroLogix** etc).

AN-X-GENI
$2,095 - List

The AN-X-GENI allows Logix processors to replace aging GE PLCs and other **Genius Bus** controllers. "Ghost" mode allows comparison of new outputs with old outputs before the new system takes control.

- Auto-configures I/O from an online Genius network
- Allows exchange of global data with existing PLCs

AN-X-MOD
$2,095 - List

The AN-X-MOD allows Logix processors to replace aging Modicon PLCs and other **Modicon S908** I/O scanners. Monitor or "Ghost" mode allows comparison of new outputs with old outputs before the new system takes control.

- Auto-configures I/O from an online S908 network
- Support 200 (S908), 800 and Quantum Series I/O

AN-X-AMX
$2,095 - List

The AN-X-AMX product line consists of four devices designed to provide connectivity to Reliance AutoMax **DCSNet** and **Remote I/O** networks. Capture and logging are available as well.

- Supports AutoMax programming software
- DCSNet master or slave
- DCSNet registers map to PLC-5 files for HMI access (no custom driver needed)

RIO Q1 2009
AN-X-AB
$1,895 - List

The AN-X-AB module acts as a bridge between Ethernet/IP and **Allen-Bradley Remote I/O** or **Data Highway Plus** networks. Supports Remote I/O **Scanner** or **Adapter**. Adapter "Ghost" mode allows comparison of new outputs with old outputs before the new system takes control.

- Supports Programming Software and HMI's
- Supports unlimited Block Transfers

AN-X-PB
$2,095 - List

The AN-PB is a powerful **PROFIBUS** "Multi-slave" Ethernet gateway and PROFIBUS capture tool. Offers an easy bridge between PROFIBUS SCADA and HMI systems.

- Can be one or many PROFIBUS slave nodes
- "Ghost" monitor of all other PROFIBUS nodes
- Profibus data maps to PLC-5 files or Modbus/TCP registers for HMI access (no custom driver needed)

AN-X-TI-MAS
$2,495 - List

The AN-X-TI-MAS allows Logix processors to replace aging **TI 500/505** PLCs.

- Auto-configures I/O from an online TI 500/505 network
- Supports all 15 Remote Bases X, Y, WX and WY

QTS Ethernet/IP – Legacy I/O Migration Solutions

- Re-use existing I/O with your new Logix Controller
- Defer I/O replacement capital cost
- Ghost mode - verify new controller behaves as old controller
- Easily swap back to old controller while debugging new system
- Prove your new control system before you commit
- Replace I/O later, a little at a time during downtimes and outages
