

Ball Valves

D-163

Valves

Ball Valves can control hot or chilled water and up to 50% glycol solution in convectors, fan coil units, unit conditioners, radiation, and reheat coils.

High performance features include:

- Close-offs up to 130 psi
- 1/2 to 2-inch line sizes
- Cvs from 0.4 to 250
- Characterized ball provides equal percentage flow characteristic
- Available in Spring Return and Non-Spring Return
- Full port and characterized balls
- Utilizes OpenAir Actuators for 2-position, floating and 0 to 10 V control

For more information on OpenAir Electronic Damper Actuators, refer to Section E.

FREE Rapid Response Program

Look for this icon on our most critical and commonly ordered products and you'll know it is available for same-day shipping through our Rapid Response program.

How does Rapid Response work?

Two-way and Three-way Ball Valves

24 Vac Proportional Control

2-way Ball Valve and Actuator.

3-way Ball Valve and Actuator.

Description

Designed to provide excellent equal percentage flow control, the Ball Valves are available in 1/2 to 2-inch line sizes and are 1/4-turn rotary control valves. These ball valves are designed to couple with an OpenAir actuator.

Features

- Universal mounting plate accommodates different actuator sizes
- Variety of ball sizes and flow coefficients minimizes the need for downsizing pipes
- Industry leading shutoff accurately controls fluid through coils
- Actuator and plate can be rotated to facilitate installation and wiring
- Standoffs provide a thermal barrier between the actuator and the mounting plate
- Plastic mounting plate, extensions, and handle do not condensate in chilled or hot water applications
- Operating handle can manually operate valve in the event of a power failure

Applications

Ball Valves can control hot or chilled water and up to 50% glycol solution in convectors, fan coil units, unit conditioners, radiation, and reheat coils.

Application Drawings

The parabolic shape of the flow optimizer orifice allows a slow opening valve. Equal movements of the valve stem at any point of the flow range changes the existing flow an equal percentage regardless of the existing flow. The ball valve equal percentage flow characteristic mirrors the flow characteristic of a coil, resulting in linear heat transfer.

Table Notes:

*Dimension "C" is maximum length, measured from the actuator, end fitting, or mounting plate, whichever extends the furthest.

1. Stamping on valve body indicates the ball size, not necessarily the line fitting size.
2. All dimensions are in inches (mm) and weights are in pounds (kg).
3. Dimension "D", Depth, is 3 inches (76 mm).
4. Dimension "E", Handle, is 4 inches (102 mm).
