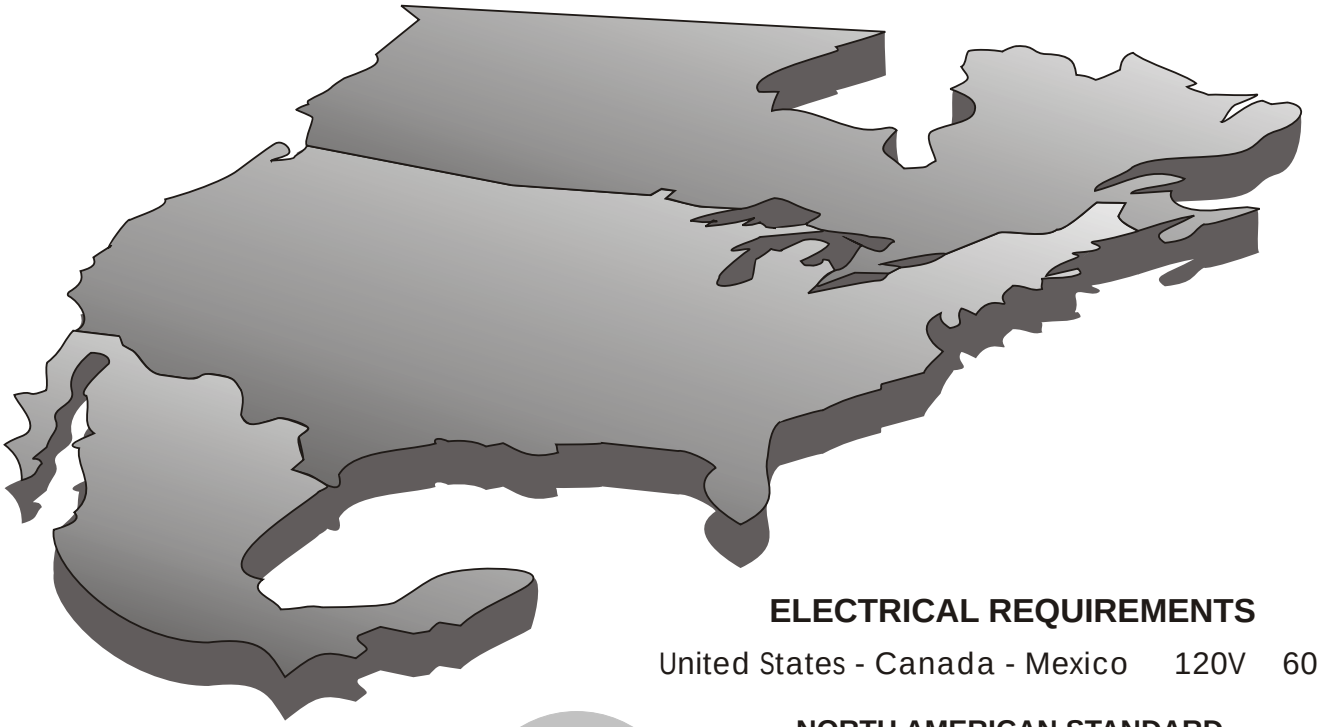
COMMITMENT

SOMFY is the world's largest manufacturer of tubular motors. For over 30 years, engineers at SOMFY have been designing motors and controls for the retractable awning, rolling shutter, interior window treatment, projection screen and other markets with a commitment to providing the highest level of quality and safety in the industry. Today our motor controls are rigorously tested both here in the U.S. and at our World Headquarters in Cluses, France, where Underwriters Laboratories has certified SOMFY's test facility. Underwriters Laboratories, or UL, is an independent, non-profit organization in the United States with the sole purpose of evaluating the safety of electrical products. SOMFY's selection as a UL Client Test Facility is further evidence of our dedication to providing the finest products on the market. SOMFY SYSTEMS, based in Cranbury, N.J. offers standard or customized electronic controls for the North American Market.



ELECTRICAL REQUIREMENTS

United States - Canada - Mexico 120V 60 Hz

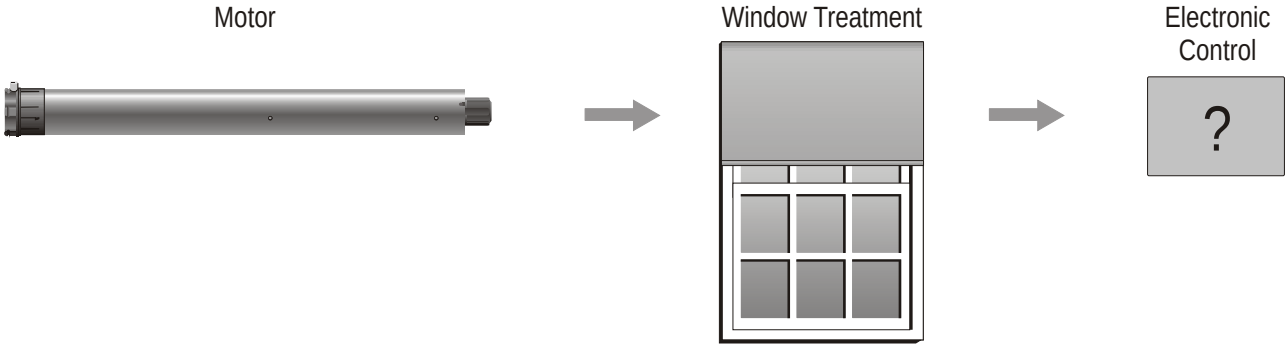
NORTH AMERICAN STANDARD

SOMFY UL approved controls can be found in UL File No. E160923

Notice: In an ongoing effort to be the leader in our industry, motor controls are occasionally subject to modification or discontinuation. SOMFY SYSTEMS reserves the right to change, update, or improve this document without prior notice.

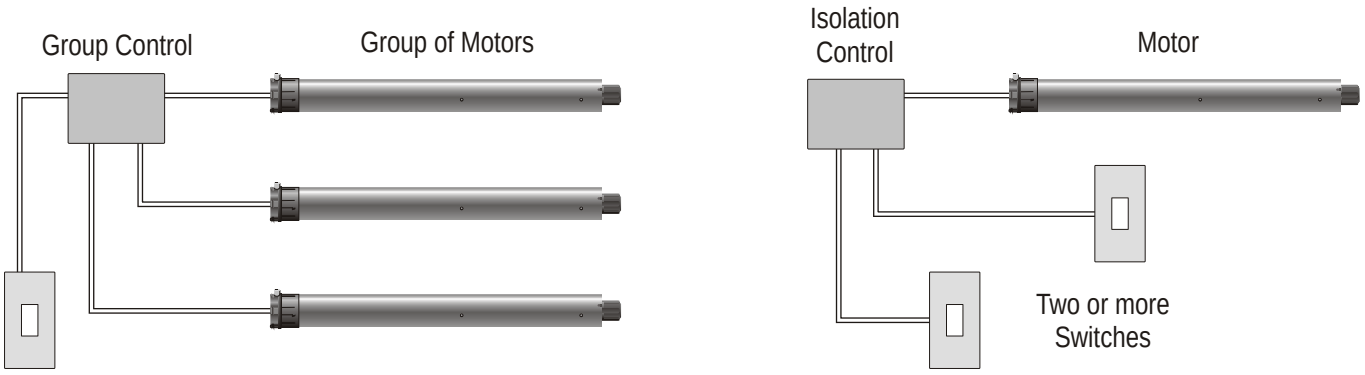
Guidelines for Selecting SOMFY SYSTEMS Electronic Products

Installations of dual direction motors require flexibility of control and compatibility not only with decor, but also with security, lighting, and environmental control systems. All SOMFY SYSTEMS control products are designed to maximize utility and aesthetics, as you will see in the catalog pages that follow. This section will help in selecting the devices that fit your application best by explaining the general options in a motor control system.



Why Do I need Motor Controls?

The design characteristics of an AC dual direction tubular motor which enables it to generate enough torque to raise awnings, shutters or shades, require several considerations in the design of its control circuit. First, these motors cannot be wired in parallel from a single switch as lighting fixtures can. There must be a SOMFY control device which prevents electrical feedback through the motor capacitor, such as a Group Controller or a network of Individual-Group controls. Second, one SOMFY motor cannot be controlled from several locations (switches) without a control device to build priorities among switch signals. A SOMFY Isolation Control or an Individual-Group Control (IGC) would apply here.



What is 'low voltage control' or 'low voltage input'?

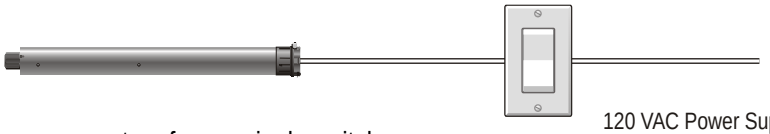
Low voltage control refers to switch and automatic control inputs which interface with 120 volt AC motor controls. Low voltage (usually 12 volts DC) provided by the motor controller supplies the switches and allows for a more flexible system design than can be found with a 120 VAC or 'line voltage' switch network. Low voltage wiring eliminates some of the hazards of line voltage, and is accomplished safely with inexpensive low voltage rated wire or modular cable.

DC motors, by definition, include low voltage controls. The wiring requirements for DC motors are different than described above, and will be discussed later in this section.

MOTORIZATION CONCEPTS (Cont'd)

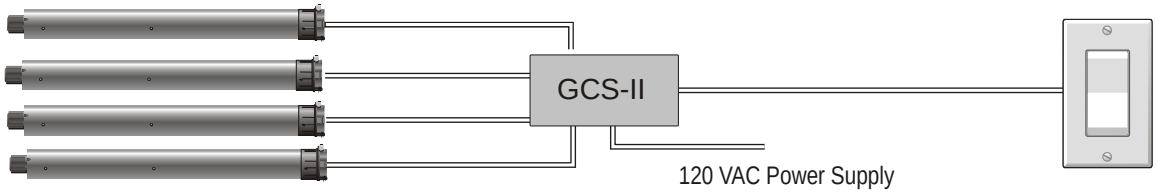
Switches

Switches are the most common interface between the user and the motor or motor controller.
SOMFY offers a line of elegant switches made exclusively for motor control. These switches feature up, down, and stop positions in both momentary and maintained configurations for hardwired AC control of a single motor. Momentary switches will continue to drive the motor in a given direction as long as that switch direction is depressed, or until the motor reaches it's limit in that direction. Maintained switches can be pressed and released and the motor will travel to it's limit in the chosen direction. If you are required to control a single motor from two or more locations, it will be necessary to have all the switches interface with a SOMFY Isolation Control unit. If one switch is required to control two or more motors, you will need to review the Group Control products.



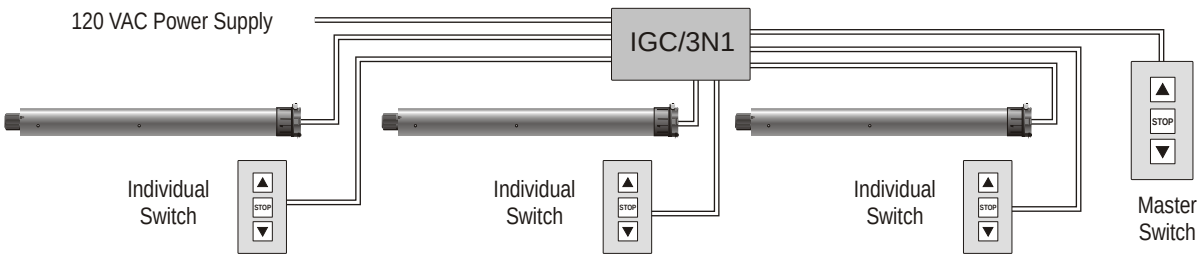
Group Control

Group Control is the movement of 2 or more motors from a single switch.
The SOMFY Group Control System allows for simultaneous control of an unlimited number of motors. At the heart of the Group Control System is the GCS-II which controls up to 4 motors as a group. The GCS-II accepts low voltage inputs from SOMFY's own line of switches and it can be activated by building lighting or automation systems. In addition, SOMFY offers sun and wind controls for the GCS-II as well as a radio remote control option. Multiple GCS-II's can be linked together and operated by a single "master" switch. If, however, both group control and individual control of a number of motors is necessary, SOMFY offers a line of Individual-Group Control products.



Individual-Group Control

Individual-Group Control includes all the functionality of Group Control (above) while maintaining the ability to operate each motor individually or in smaller 'sub-groups'.
Under ideal conditions, you would be able to control each of a number of motors individually but also maintain the capability to operate them as a group. SOMFY IGC products make this possible. The IGC is a single motor controller with low voltage individual and group switch inputs. Control options include switches, timers, remotes, lighting controls, and sun and wind control. To gain economies of scale, install the IGC/3N1. The 3N1 is a 3 motor controller with individual inputs for each of the 3 motors and a master switch input to operate all 3 at once. Any number of IGCs and IGC/3N1s can be linked to achieve the ultimate in flexible systems. If remote control is specified, SOMFY offers the IR (Infrared) Switch, which combines the elegance of the IGC switch with the convenience of infrared remote control in a single gang box. In addition, the IGC II and IGC II/3N1 add infrared remote capabilities through an X10 interface.



Remote Control

Remote Control enhances comfort and convenience, and is GCS and IGC compatible.
To satisfy today's consumers' need for comfort and convenience, SOMFY SYSTEMS offers a complete line of remote control products in both infrared and radio frequencies. Infrared controls are typically less expensive but require the user to be indoors and in line of sight of the infrared receiver. Radio remote control provides a greater range and the signal can be transmitted through walls and floors, so receivers can be mounted out of sight. In both cases, remote control not only adds functionality, but by eliminating wall switches it also relieves some of the wiring burden during installation. Remote control units can be stand-alone for one to three motors, or they can be interfaced with group or individual controls. There is a SOMFY remote control solution for every motor or group application.

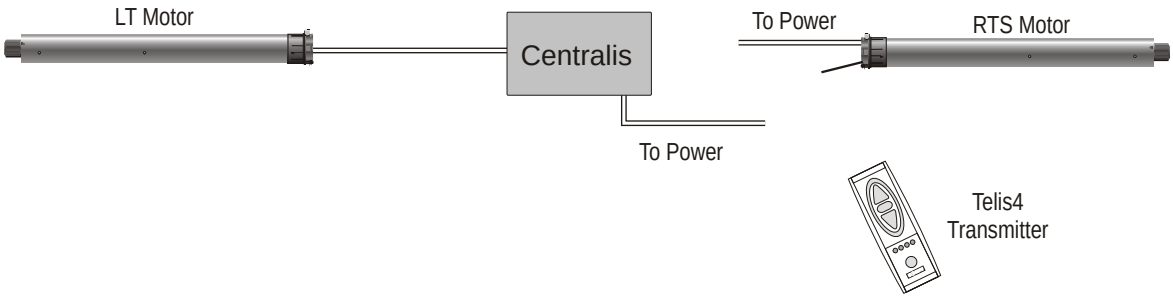
Somfy's newest innovation in Remote Control is Radio Technology Somfy™(RTS), where the radio receiver is built right in the motor.

MOTORIZATION CONCEPTS (Cont'd)

Remote Control

To satisfy today's consumers' need for comfort and convenience, SOMFY SYSTEMS offers a complete line of remote control products in both infrared and radio frequencies. Infrared controls are typically less expensive but require the user to be indoors and in line of sight of the infrared receiver. Radio remote control provides a greater range and the signal can be transmitted through walls and floors, so receivers can be mounted out of sight. In both cases, remote control not only adds functionality, but by eliminating wall switches it also relieves some of the wiring burden during installation. Remote control units can be stand-alone for one to three motors, or they can be interfaced with group or individual controls. There is a SOMFY remote control solution for every motor or group application.

Somfy's newest innovation in Remote Control is Radio Technology Somfy™ (RTS), where the radio receiver is built right in the motor. Wiring is minimized during installation, as only power to the motor is required. With the Inteo line of controls, standard LT motors can be controlled side by side with RTS Motors, using the Telis Transmitters.

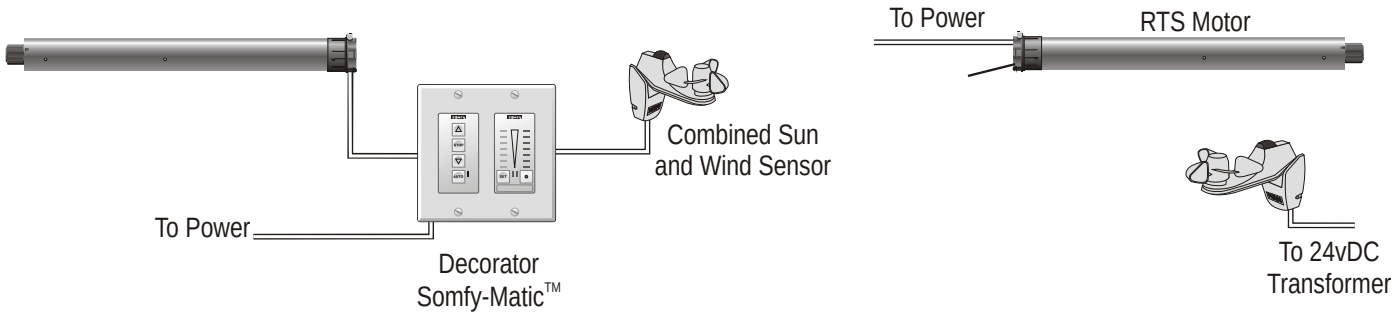


Automatic Controls

Motors can be controlled automatically based on the sun, wind, or time of day.

The ultimate motor control is a SOMFY SYSTEMS automatic controller. Based on the intensity of the sun, the wind, or just the time of day, intelligent environmental controls and timers can position a single motor or a whole house full even when there's no one home. These controls are engineered to be compatible with the entire line of SOMFY products, and can be integrated into a system with manual switch stations and remote control. Automatic controls are available with standard installation features or in an outdoor plug-in system, reducing the wiring requirements for outdoor (awning) applications.

For standard LT motors, use the Decorator Somfy-Matic™(DSM) for sun and wind control; the Decorator Comfort Control (DCC) for protection from the sun only; the Eolis Box for wind protection only; and the Intellis Timer for time of day control. If radio remote operation is desired, the Soliris or Eolis Receiver RTS will provide automation based on sun and wind conditions. For the most streamlined installation, however, an RTS motor can be paired with a Soliris or Eolis 24v RTS Sensor. These sensors wirelessly transmit commands to the motor to raise or lower based on the sun or wind conditions. The Chronis Timer will operate RTS motors or Inteo Controls if wireless time of day operation is desired.



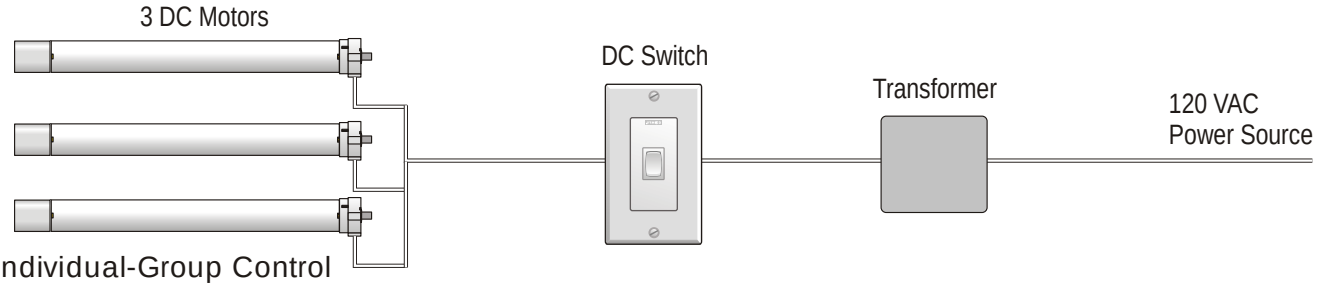
MOTORIZATION CONCEPTS (Cont'd)

DC MOTOR CONTROLS

The use of DC motors eliminates some of the complexities required for controlling AC motors. SOMFY SYSTEMS line of DC motor controls includes Switches, Individual-Group Controls, and Infrared Remote Controls. Keep in mind that whenever DC motors are called for, a transformer must be specified to supply power to the system.

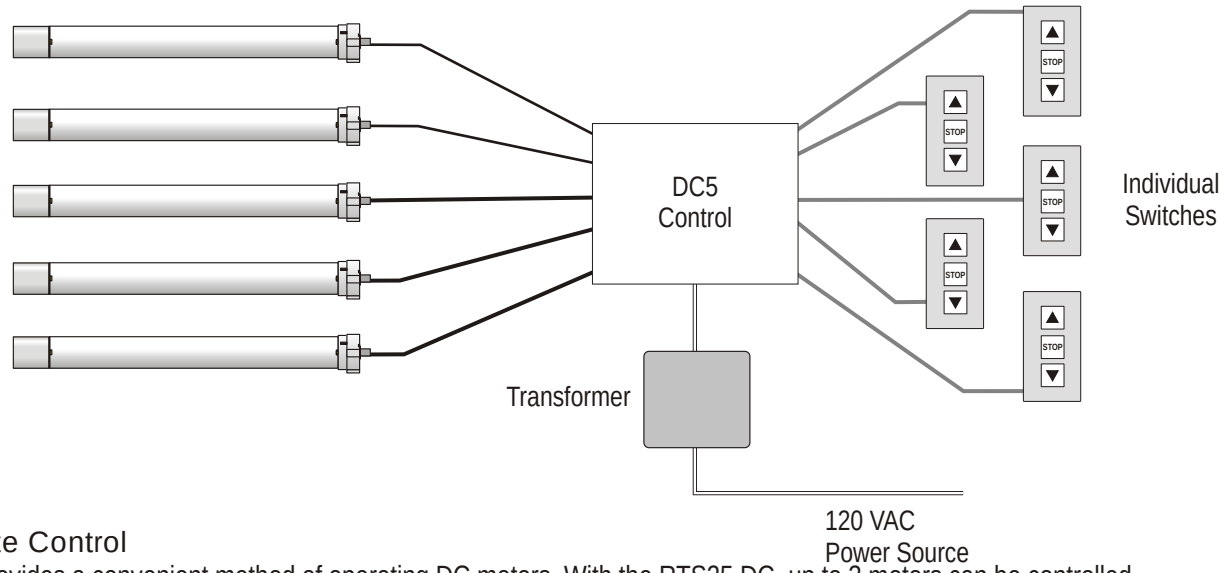
Switches

DC motors can be wired in parallel from a single switch. One or more motors can be controlled from a single low voltage switch. SOMFY's switches feature momentary or maintained operation, and are offered in rocker and toggle styles.



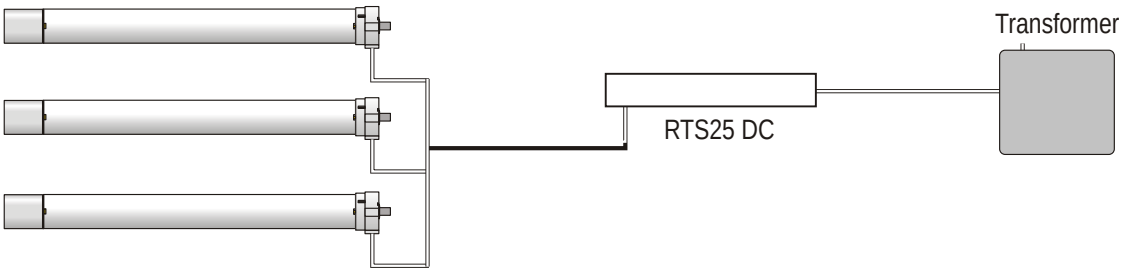
Individual-Group Control

While a simple switch can control a small group of DC motors, the DC5 is necessary for preserving both individual and group control. Each DC5 Control operates up to five motors Individually using a push-button switch or infrared control. A Master Switch connection is available for Group Control and for connecting to other DC5 controls.



Radio Remote Control

Radio control provides a convenient method of operating DC motors. With the RTS25 DC, up to 3 motors can be controlled simultaneously from a single Telis Transmitter. The RTS25 can be programmed with tilt, an intermediate position, and varying speeds. It can be mounted in the headrail with the motor, or externally.

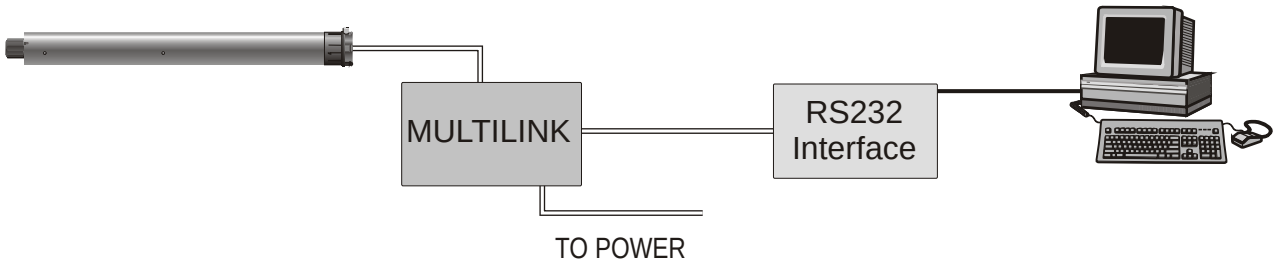


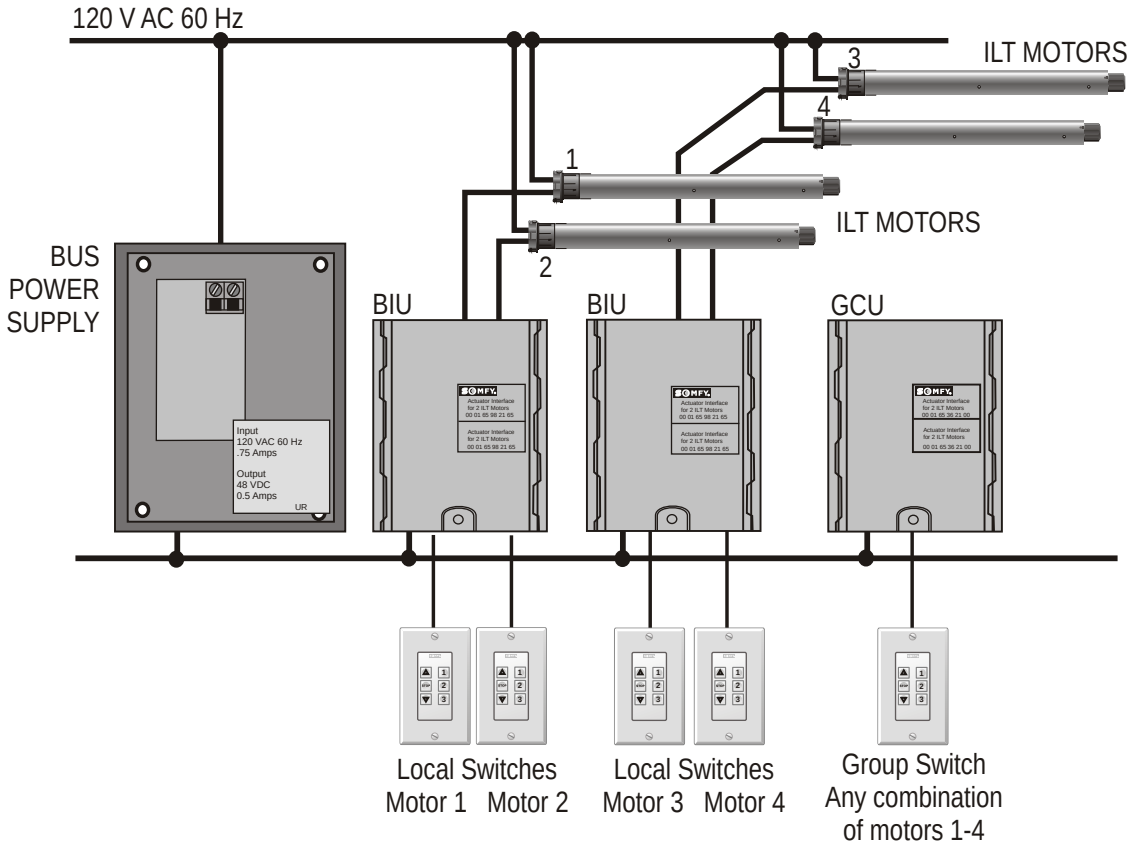
MOTORIZATION CONCEPTS (Cont'd)

INTERFACING and INTEGRATING

In today's world of increasing technology, we are automating our lifestyles more and more to save time and gain convenience. SOMFY is committed to providing the best products and service to systems integrators. Most of SOMFY'S controls have low voltage interface points for control by outside home automation or lighting systems. These details are located throughout the catalog pages.

SOMFY SYSTEMS also has an RS232 module that will communicate between a PC and SOMFY controls. For more complex systems, SOMFY offers a line of LON compatible controls that operate with our ILT motor. This system has the ability, through software, to monitor outside light conditions in order to optimize indoor lighting and temperature.





Switches

DECORATOR SWITCH LINE

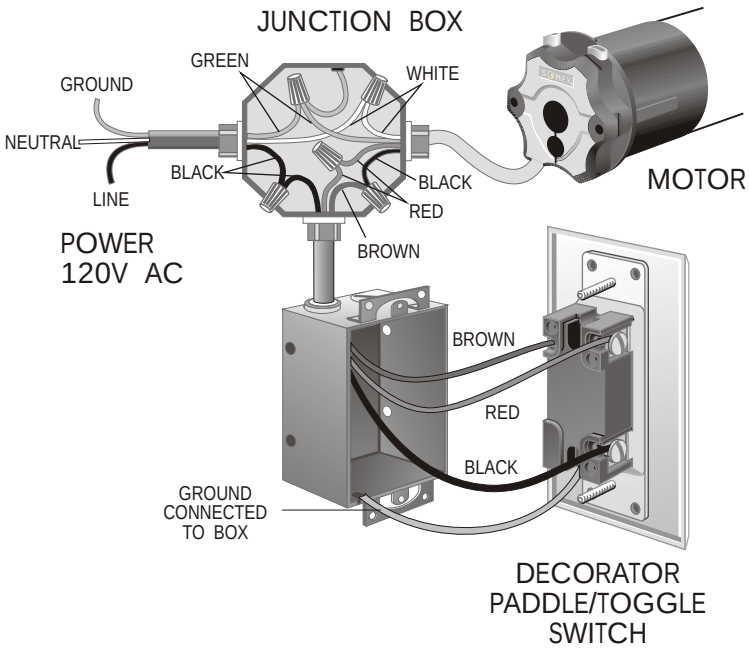
DESCRIPTION

SOMFY's Decorator Switches provide easy control of all types of motorized window applications. Their rugged yet elegant design complement any decor. They are available in white and ivory and, with the exception of the standard DC Switches, feature a maintained or momentary model.

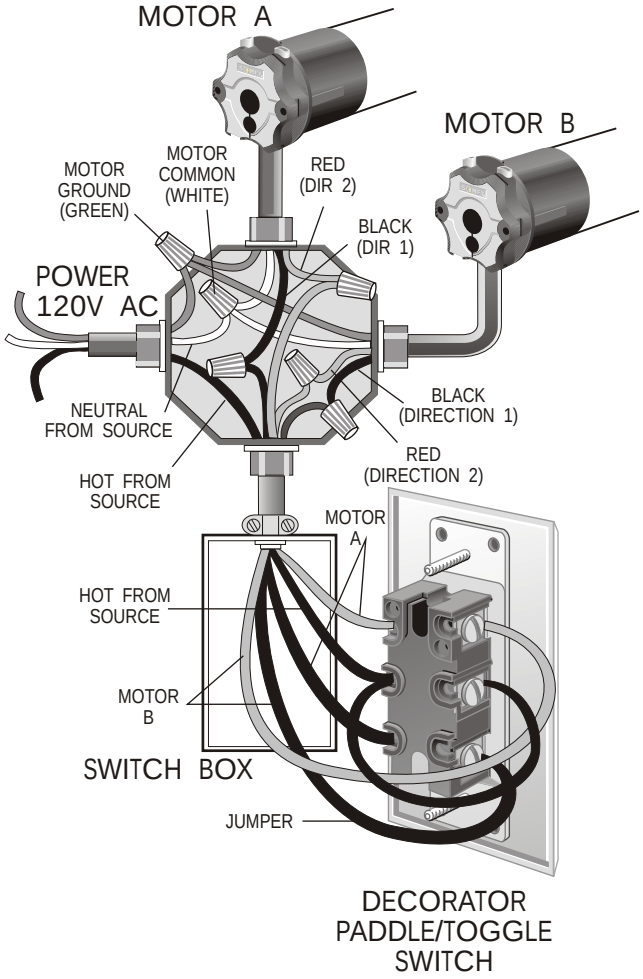
NOTE: Switchplates must be ordered separately

APPLICATIONS

ONE MOTOR / SINGLE POLE SWITCH



TWO MOTORS / DOUBLE POLE SWITCH



CAUTION: Before proceeding with the line voltage wiring instructions, the up and down limits of each motor should be set using the SOMFY tester cable (Cat. No. 6020086). Refer to the limit switch instructions packaged with each SOMFY motor for more information.

DC DECORATOR ROCKER SWITCHES

The DC Decorator switch line is designed for DC motorized interior window treatment applications. Both single and double switch stations are single pole, double throw, with center off. The soft contours and coloring of the switches will complement any decor, and they are designed to fit into a standard single gang electrical box.

Description	Catalog Number

DC Rocker Switch (Momentary - Double)	6300968

Cat. No. 6300922

Cat. No. 6300923

STANDARD DC SWITCHES

SOMFY's three-position maintained DC toggle and rocker switches provide convenient fingertip control of any DC controlled window treatment in your installation. These switches feature up, down, and center stop positions, and are the maintained type. They mount easily into a standard single gang box.

Description	Catalog Number
DC Rocker Switch (White)	6120694
DC Rocker Switch (Ivory)	6120695

Cat. No. 6120694

5 POSITION DC SWITCHES

SOMFY's five position DC switches are designed to give both maintained and momentary outputs. This is especially useful for tilt control with horizontal blinds. These switches are designed to mount in a single gang electrical box.

OUTDOOR PLUG-IN SYSTEM

DESCRIPTION

The Outdoor Plug-in System enables a dealer to install a motorized retractable awning and adjust the limit switches in just one visit! The motor cable plugs directly into the prewired control switch and the detachable power cable plugs into an outdoor receptacle. Custom fit male/female connectors make installation simple.

The system's quick and easy disconnect feature provides the customer with additional safety and security. The end user can easily disconnect it during the winter months, or to prevent tampering while the premises are vacant.

MECHANICAL SPECIFICATIONS

Overall Dimensions: L: 5 3/4 in. W: 2 1/2 in. D: 3 in.

Switch comes installed in an outdoor weatherproof box.

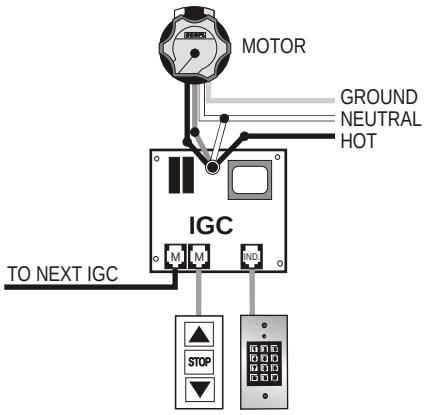
DIGITAL KEYPAD

DESCRIPTION

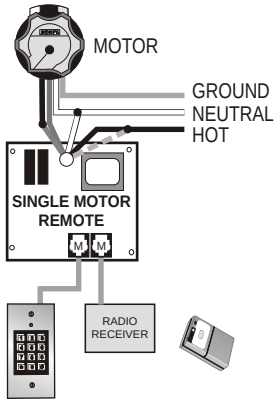
The Somfy Digital Keypad is a programmable indoor or outdoor security switch for rolling shutters, doors and grilles. SOMFY's easy to install and simple to use Digital Keypad is the perfect "KEYLESS" solution and a convenient control for motorized rolling shutters and grilles. Designed for security conscious customers, the Digital Keypad features a personal code number to help prevent unwarranted access to their premises. The private entry code can be changed by the end user to ensure limited access or protection should a compromise of security occur.

OPERATING AND PROGRAMMING INSTRUCTIONS

IGC



SINGLE MOTOR REMOTE



The IGC Outdoor Digital Keypad comes factory programmed with codes for UP, DOWN, and STOP. When the UP code is entered, the keypad will command the IGC to raise the shutter or grille. Similarly, the shutter or grille will lower when the DOWN code is entered.

To keep secure access, the codes can be reprogrammed by following these steps:

KEYPAD ENTRY	FUNCTION
*382436#	Enter programming mode
*193#	Set code length to 3 digits
*11UUU#3#	UUU is the UP code (enter desired digits)
*11SSS#34#	SSS is the STOP code
*11DDD#4#	DDD is the DOWN code
*2301#	Set output pulse width
*2401#	
*99#	Exit programming mode

The Digital Keypad for Remote Control comes programmed with a single security code. Every time the code is entered, the Remote Control will sequence through UP, STOP, DOWN, STOP.

Follow these steps to change the security code:

1. Locate the code bank on the decoder module. It has 17 socket positions (*, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, #) which are printed on the circuit board.
2. Socket positions A B C D E represent the five possible digits of the operating code. Socket position A is the first digit, while E is the last digit of the code.
3. Place one end of a program jumper wire (pre-installed) in socket A and the other end in the desired first digit. Repeat this process for B, C, D, and E. NOTE: You may not use the same number twice in the operating code.
4. Attach the decoder to the keypad. Locate the 13 position socket marked S2 on the decoder board. Align socket S2 with the 13 positions on the keyboard and carefully press the socket onto the pins.

KEY SWITCHES

DESCRIPTION

SOMFY's line of high-security outdoor Key Switches are protected by a tamper proof cover that cannot be removed without inserting the key. They are available with flush or surface mounting and maintained or momentary switching.

SOMFY also offers several indoor Key Switches for those areas that require enhanced security. These Key Switches include heavy duty and light duty models with either momentary or maintained operation.

DECORATOR IGC SWITCH

DESCRIPTION

The Decorator IGC switch line is designed for use with SOMFY's IGC and IGC/3N1 controls. This switch features a 6 pin modular connector which takes advantage of modular cable to connect it to a motor controller. The IGC Switch can be used for individual or group control. Both single and double switch stations come in white and ivory, and feature UP, STOP and DOWN buttons. The soft contours and neutral colors complement any decor.

DECORATOR RTS WIRELESS SWITCH

DESCRIPTION

The Decorator RTS Switch (single or four channel) is a wireless radio switch compatible with all the RTS Motors, and externally mounted RTS receivers. It will operate window coverings at a distance with no wiring between the switch and motor or receiver. Commands are transmitted by radio waves at 433.42 MHz.

MECHANICAL SPECIFICATIONS

Overall Dimensions: L: 4 $^{1}/_{2}$ in. W: 2 $^{3}/_{4}$ in. D: 1 $^{1}/_{4}$ in.

Operating Temperature: 41°F to 104°F

Frequency Range (optimal conditions): 65 ft.

Installs in a standard, plastic, single gang electrical box.

ELECTRICAL SPECIFICATIONS

Power: 3V Lithium battery, Cr2430

Frequency: 433.42 Mhz

GENERAL OPERATING INSTRUCTIONS

NOTE: Please Consult RTS Motor or Receiver Instructions for Specific Product Details.

1. Place the RTS Motor or Receiver in Programming Mode as described in the Operating Instructions.
2. Press the programming button on the side of the RTS Switch to program it in the memory of the RTS Motor or Receiver. Be sure the channel is first selected on the four channel model.
3. Pressing the UP button will raise the window covering, while pressing the DOWN button will lower it. To stop the window covering, simply press the STOP button.
4. Pressing the Channel Selector button on the 4-Channel Switch will sequence through the channels. Each LED will light to indicate the channel selected. The Master or 5th channel is indicated when all LEDs are lit.

CHRONIS RTS TIMER

DESCRIPTION

SOMFY's new Chronis RTS Timer is a wireless digital timer compatible with all the RTS Motors and externally mounted RTS Receivers such as the Centralis. It will automatically raise and lower window treatments based on the pre-set time of day. The Chronis can be programmed to operate at the same time each day or different times every day. It has a security function that will raise or lower shades randomly to give the impression of an occupied home. The Chronis Lite has the addition of a light sensor, so window treatment automation can also be determined by external sun levels. Commands are transmitted via radio, so external wiring is not necessary.

MECHANICAL SPECIFICATIONS

Overall Dimensions: L: $3\,^{1}/_{8}$ in. W: $3\,^{1}/_{8}$ in. D: 1 in.

Operating Temperature: 41°F to 104°F

Frequency Range (optimal conditions): 65 ft.

ELECTRICAL SPECIFICATIONS

Power: 2 1.5V DC (AAA) batteries

Frequency: 433.42 Mhz

GENERAL OPERATING INSTRUCTIONS

NOTE: Please Consult RTS Motor or Receiver Instructions for Specific Product Details.

1. Place the RTS Motor or Receiver in Programming Mode as described in the appropriate Operating Instructions.
2. Press the programming button on the Chronis, "PROG" will appear in the display. Continue holding the programming button until the RTS Motor or Receiver confirms it is memorized.
3. Program the UP and DOWN times for each day of the week, according to the Chronis operating instructions. The Chronis will automatically raise or lower the window treatments at the set time.
4. For Chronis Lite installation, connect the suction cup sensor to the control and window. Enter the sun level as described in the Chronis Lite instructions. The shade will lower automatically when the sun level is exceeded.
5. To manually operate the shades, press the UP button to raise the window covering, or press the DOWN button to lower it. To stop the window covering, simply press the STOP button. Intermediate stop positioning (IP) can also be activated. See instruction manual for details.

INTELLIS 24 HOUR TIMER

DESCRIPTION

IntelliS is an easy-to-use timer for SOMFY motors. Each day, IntelliS will automatically raise or lower window treatments at a specified time. It is compatible with SOMFY's IGC and GCS-II controls to operate different combinations of individual and groups of window treatments. There is also a model that will operate a motor directly. With the included bracket, the IntelliS Single Motor easily mounts next to existing light switches. Programming is simple, with no confusing displays or rotary dials.

With just the push of a button, Intellis is in control.

MECHANICAL SPECIFICATIONS

Overall Dimensions: L: 4 1/2 in. W: 2 3/4 in. D: 1 1/4 in.

Installs in a standard single gang electrical box.

ELECTRICAL SPECIFICATIONS

Voltage Rating:

Single Motor
Input 120 VAC +/- 10% 60 Hz
Output 120 VAC 5A 1/4 HP

IGC/GCS
Input 12-15 VDC 150 MA (supplied by IGC or GCS)
Output 12-15 VDC 150 MA (open collector)

Approvals: The IntelliS Single Motor is UL508 for industrial controls (UL, CUL) where applicable.
Complies with the National Electrical Code (NEC) standard.

PROGRAMMING

IntelliS has two modes - Manual, and Automatic. In Manual Mode, the AUTO light is off and IntelliS functions like a standard SOMFY switch. In Automatic Mode the AUTO light is on, and IntelliS moves window treatments UP once each day and DOWN once each day, at the times you have chosen. To program the IntelliS, simply press the auto button and hold it for approximately 5 seconds, until the AUTO light begins to blink. Continue pressing the AUTO button, then press the button (UP or DOWN) corresponding to the direction you desire the window treatment to move. IntelliS memorizes the action, and will perform the same action at the same time every day. Later, at the time you wish the window treatment to move in the opposite direction, press and hold the auto button for 5 seconds until the AUTO light begins to blink, continue pressing the AUTO button then press the button for that direction. IntelliS is now fully programmed, and will repeat this cycle every 24 hours moving window treatments at the precise times you have programmed.

INFRARED SWITCH

DESCRIPTION

The Infrared Switch is designed to provide remote access to many of SOMFY's standard controls. By incorporating an addressable infrared sensor into SOMFY's Decorator IGC switch, individual and master control is possible from a single infrared transmitter. The Infrared switch is compatible with the IGC, GCS-II, IGC-HB, IGC II and MCIR. Up to 8 addresses can be assigned in a variety of configurations (i.e. individual window control, room control, floor control, etc.) to meet the requirements of your customers.

MECHANICAL SPECIFICATIONS

Overall Dimensions: L: 4 $^{1}/_{2}$ in. W: 2 $^{3}/_{4}$ in. D: 1 $^{1}/_{4}$ in.

Typical Range in Optimal Conditions: 20 ft.

Installs in a standard single gang electrical box.

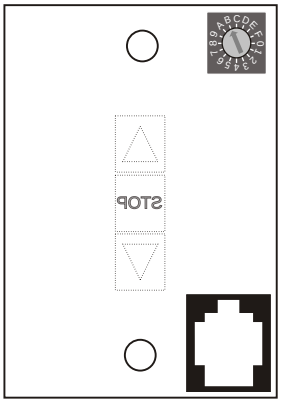
OPERATING PROCEDURES

1. Connect from the modular connector on the IR Switch to the modular connector on the IGC, MCIR or GCS. On the IGC, the switch can be connected to either the Master or Individual ports. Refer to instructions for details.

2. Set the unit address using the rotary switch. Position 1 refers to IR address 1, and position F refers to IR address 15. Position 0 is used only for the single channel transmitter.

3. Mount the IR Switch in a single gang box. Ensure nothing obstructs the sensor opening.

4. Operate each motor in one direction using either the push button switch or the infrared transmitter. If the motor does not move in the correct direction, reverse the red and brown wires at the motor. Please refer to IGC, MCIR or GCS instructions for further information.



BACK VIEW

OPTIONS

SINGLE CHANNEL TRANSMITTER: A single motor (address number 0) or group can be operated by pressing either the UP or DOWN buttons on the transmitter. Pressing the center button will stop the motor at its present position.

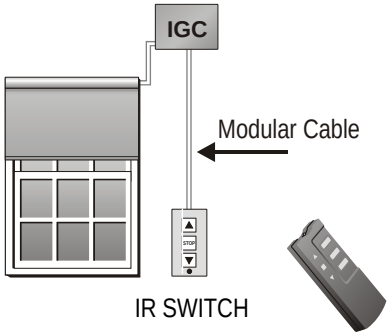
EIGHT CHANNEL TRANSMITTER: This transmitter has the ability to activate up to 8 motors or groups individually. Press the address of the switch you wish to operate, then the directional command. Pressing a group command (1-4, 5-8, 1-8) and then a direction will activate all switches in the chosen group that are within transmitter range.

1 Channel IR Transmitter
Cat. No: 6300879

8 Channel IR Transmitter
Cat. No: 6300988

TYPICAL APPLICATIONS

INDIVIDUAL CONTROL (One Channel)



The first illustration shows a single channel transmitter controlling a single motor.

In the second illustration, an eight channel transmitter provides individual and master control. Each switch has a unique address.

Any number of motors can be operated as a group using the IR Switch-GCS version.

INDIVIDUAL GROUP CONTROL SYSTEM FOR DC MOTORS (IGC-DC)

DESCRIPTION

The IGC-DC provides control of one or more DC motors in groups and/or individually from one or more locations. It provides both lift and tilt capabilities for horizontal blind applications. The IGC-DC is a very flexible control system that can be configured in a variety of ways (i.e.; individual window control, floor control, total building control, etc.) to meet the requirements of your customers. Unlike the IGC, the IGC-DC is a switch and motor controller all in one package, and can be installed in a single gang electrical box.

MECHANICAL SPECIFICATIONS:

Overall Dimensions: L: 4 $^{1}/_{2}$ in. W: 2 $^{3}/_{4}$ in. D: 1 $^{1}/_{8}$ in.

Installs in a standard single gang electrical box.

ELECTRICAL SPECIFICATIONS

Voltage Rating: INPUT: 12 or 24 VDC

OUTPUT: 12 or 24 VDC 750mA per motor

Approvals: Complies with the National Electrical Code (NEC) Standard

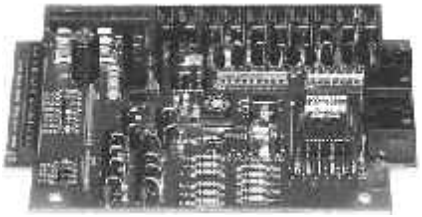
DC-5 CONTROL

DESCRIPTION



The SOMFY DC-5 is a 5-motor individual and group control system for 12 and 24 volt DC motors. It can be operated by IGC switches, infrared remote, or dry contact inputs. The DC-5 has tilting capabilities for horizontal blind applications, and is available with either 8 channel or 24 channel infrared control.

MECHANICAL SPECIFICATIONS

Overall Dimensions: L: 6 in. W: 4 $^{1}/_{4}$ in. D: 2 $^{1}/_{4}$ in.

Voltage Rating: INPUT: 12 or 24 VDC

OUTPUT: 12 or 24 VDC 750mA per motor

Approvals: Complies with the National Electrical Code (NEC) Standard

Motor 4 Down
Motor 3 UP
Motor 3 Down
Motor 2 UP
Motor 2 Down
Motor 1 UP
Motor 1 Down
Power +
GND

The screw terminals on the DC5 can be used for interfacing to home automation or other third party systems. To activate a Master Up command, a momentary dry contact (relay) closure is required between the MASTER UP input and GND. This contact should remain closed for less then 0.5 seconds to raise or lower a shade, or more then 0.5 seconds to tilt a horizontal blind. Similarly, to activate a Master Down command, a contact closure is required between the MASTER DOWN and GND terminals.

If the window treatment is in motion, a STOP command is given by activating the direction of movement. For example, if the shade is moving up, activating another UP command within 3 minutes will stop the window treatment. Alternately, a contact closure is required between the MASTER UP, MASTER DOWN and GND terminals.

Follow the above timing requirements for each of the individual inputs, Motor 1 through Motor 5.

GROUP CONTROL SYSTEM II
(GCS-II)

DESCRIPTION

The Group Control System-II (GCS-II) permits low voltage control of up to four SOMFY operators with one or more switches, from one or more locations. Optional low voltage control can be accomplished using SOMFY's Decorator Somfy-Matic™, Decorator Comfort Control or Radio Remote Control Kit. The GCS-II offers only group control, and does not have the capability of operating each motor individually. The Group Control System-II is UL and cUL approved.

For applications requiring more than 4 motors operated by the same switch, the GCS-II can be daisy-chained by way of the low voltage switch terminals.

MECHANICAL SPECIFICATIONS

Overall Dimensions: L: 8 in. W: 10 in. D: 4 in.

ELECTRICAL SPECIFICATIONS

Voltage Ratings:

INPUT:	Line Voltage:	115 VAC +/- 10%	50/60 Hz 20A
	Low Voltage:	12 VDC 0.3A	
OUTPUT:		115 VAC	5A (Each motor)
	Fuses: (Motor)		2 x 10A (One per two motors)
	(Low Voltage)		1/2A

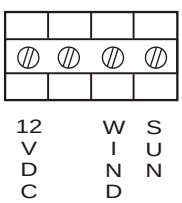
Approvals:

Conforms to UL508 standard for industrial controls
Complies with the National Electrical Code Standards (NEC)

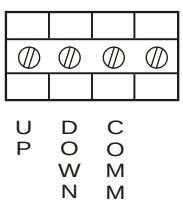
HOME AUTOMATION INTERFACE

MODULAR CONNECTOR

SENSORS CONNECTION



LOW VOLTAGE SWITCH CONNECTION

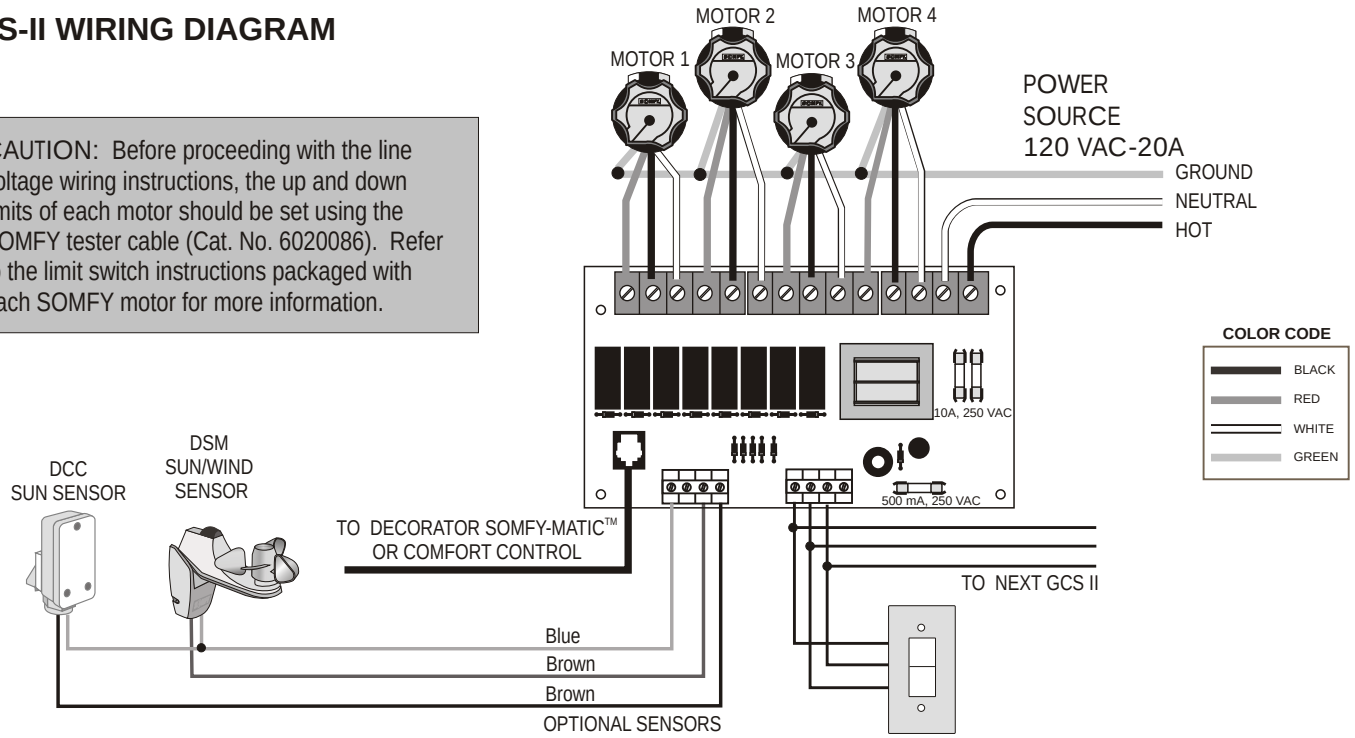


Low voltage terminals are provided on the GCS-II for interfacing to home automation or other third party systems. To activate an Up command, a maintained dry contact (relay) closure is required between the UP input and COMMON. This contact should remain closed for approximately 3 minutes to ensure full travel of the window treatment. Similarly, to activate a Down command, a contact closure is required between the DOWN and COMMON terminals. The window treatment will stop when the contact closure is released.

TYPICAL APPLICATION

GCS-II WIRING DIAGRAM

CAUTION: Before proceeding with the line voltage wiring instructions, the up and down limits of each motor should be set using the SOMFY tester cable (Cat. No. 6020086). Refer to the limit switch instructions packaged with each SOMFY motor for more information.



*When using DCC, remove wind connection on GCS-II

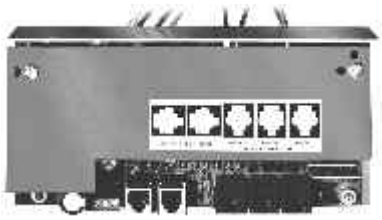
INDIVIDUAL-GROUP CONTROL
(IGC and IGC/3N1)

DESCRIPTION

The IGC series provides control of one or more motors in groups and/or individually from one or more locations. This advanced yet simple to install modular control system can be activated manually or automatically. The heart of the system is the IGC Motor Controller used for each motor. However, greater economy can be obtained using the IGC/3N1 version for those jobs that call for controlling at least three motors individually or in groups.



The IGC is a very flexible control system that can be configured in a variety of ways (individual window control, floor control, total building control, etc.) to meet the requirements of your customers.

The Individual IGC Controller has an added feature. It is equipped with a dry contact input that can interface with a window alarm system. One typical application is for casement windows; when the window is open, the motor will not operate. This will help prevent damage to window coverings.

MECHANICAL SPECIFICATIONS

Overall Dimensions: IGC: L: 3 1/2 in. W: 3 3/8 in. D: 2 1/4 in.

IGC/3N1: L: 7 3/16 in. W: 3 1/2 in. D: 1 7/8 in.

IGC fits in a 2 gang masonry electrical box. IGC/3N1 fits in a 4 gang masonry electrical box.

ELECTRICAL SPECIFICATIONS

Voltage Ratings:

IGC: INPUT:

Line Voltage: 115 VAC +/- 10% 50/60 Hz

Low Voltage: 12 VDC 90mA maximum consumption

OUTPUT: 115 VAC 5A 1/4 HP
Fuse 5A

IGC/3N1: INPUT:

Line Voltage: 115 VAC +/- 10% 50/60 Hz

Low Voltage: 12 VDC 185mA maximum consumption

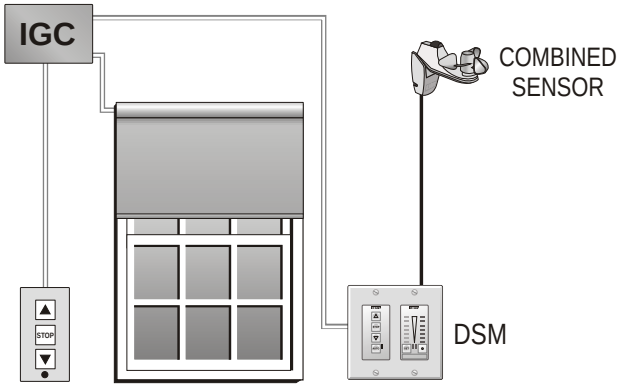
OUTPUT: 115 VAC 15A (5A per motor) 1/4 HP
Fuse: 3 x 5A

Approvals:

Both the IGC and IGC/3N1 conform to UL508 for industrial controls.
Complies with the National Electrical Code Standards (NEC)
UL and cUL approved

APPLICATION NOTES

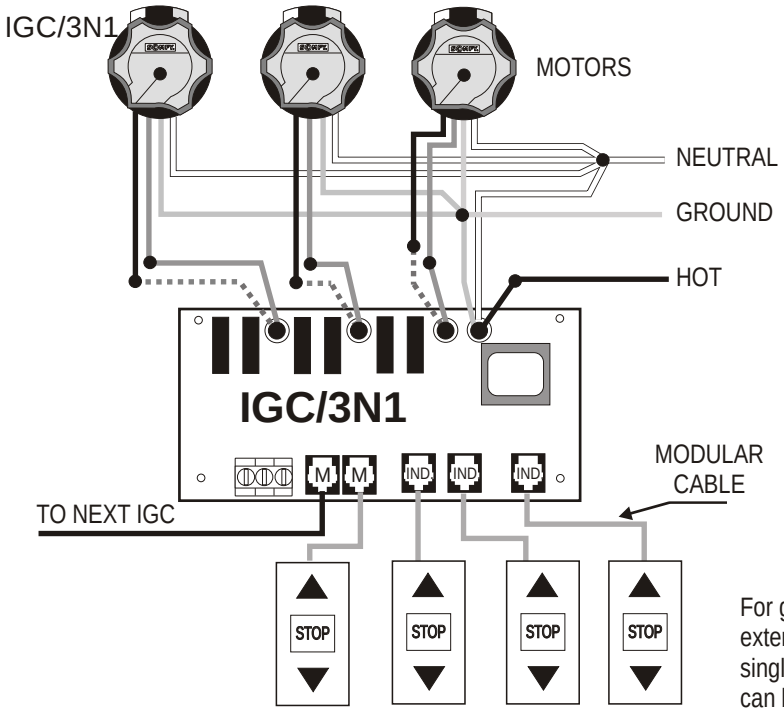
The Individual-Group Control System is compatible with other SOMFY Controls (i.e., Remote Control, IntelliS Timer, Decorator Somfy-Matic™, Decorator Comfort Control, etc.) and other security, lighting and HVAC systems.



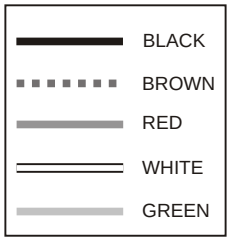
IGC WIRING SCHEMATIC

M = MASTER
IND = INDIVIDUAL

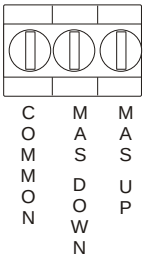
CAUTION: Before proceeding with the line voltage wiring instructions, the up and down limits of each motor should be set using the SOMFY tester cable (Cat. No. 6020086). Refer to the limit switch instructions packaged with each SOMFY motor for more information.



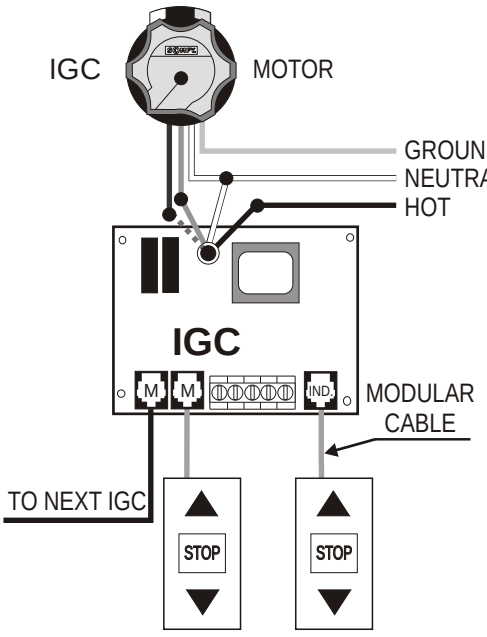
COLOR CODE



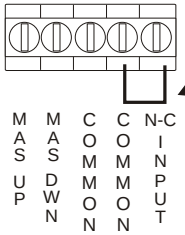
LOW VOLTAGE TERMINALS DETAIL



For group only control from an external device, a single-pole, single-throw momentary switch can be connected between either the MAS (Master) UP and COMMON or MAS DOWN and COMMON terminals.



LOW VOLTAGE TERMINALS DETAIL



FACTORY - INSTALLED JUMPER

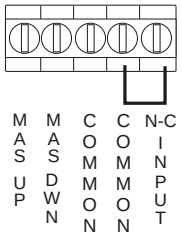
For group only control from an external device, a single-pole, single-throw momentary switch can be connected between either the MAS UP and COMMON or MAS DOWN and COMMON terminals.

The N-C (normally closed) INPUT terminal is for a normally closed contact connected to a casement window or french door. When the door or window opens, this contact opens and disables the down direction. DO **NOT** REMOVE FACTORY INSTALLED JUMPER IF THIS FEATURE IS NOT UTILIZED.

HOME AUTOMATION INTERFACE

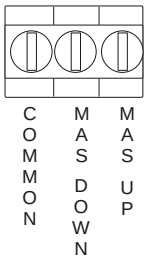
IGC

LOW VOLTAGE TERMINALS DETAIL



IGC/3N1

LOW VOLTAGE TERMINALS DETAIL



Low voltage terminals are provided on both the single motor IGC and IGC/3N1 for interfacing to home automation or other third party systems. To activate a Master Up command, a momentary dry contact (relay) closure is required between the MAS UP input and COMMON. This contact should remain closed at least 0.5 seconds, but no more than 1 second. Similarly, to activate a Master Down command, a contact closure is required between the MAS DWN and COMMON terminals.

If the window treatment is in motion, a Stop command is given by activating the direction of movement. For example, if the treatment is moving up, activating another UP command within 3 minutes will stop the window treatment. Alternately, to activate a STOP command, a contact closure is required between the MAS UP, MAS DWN and COMMON terminals.

IGC - HB FOR HORIZONTAL BLINDS

The IGC-HB and IGC-HB/3N1 are specifically designed to provide lift and tilt capability for horizontal blind applications. They are completely compatible with SOMFY's standard IGC, so wiring and basic operation are similar. When using the IGC-HB in combination with a decorator IGC switch, a blind can be raised or lowered by momentarily pressing and releasing the UP or DOWN button. The TILT function is activated by pressing and holding the button corresponding to the desired direction of tilt. When the slats are at the desired angle, simply release the directional button.

For Home Automation interfacing, a contact closure is required as with the standard IGC. The contact should remain closed for less then 0.5 seconds for raising or lowering blinds and greater then 0.5 seconds for tilting. The Stop function can only be activated with a simultaneous contact closure between the MAS UP, MAS DWN and COMMON terminals.

INDIVIDUAL-GROUP CONTROL II
(IGC II and IGC II/3N1 - X10 COMPATIBLE)

DESCRIPTION

The IGC-II system provides control of one or more motors in groups and/or individually from one or more locations. This advanced, yet simple-to-install modular control system can be activated manually or automatically. The heart of the system is the IGC-II Motor Controller used for each motor. However, greater economy can be obtained using the IGC- II/3N1 for those jobs that call for controlling three motors individually or in groups. The IGC-II is a very flexible control system that can be configured in a variety of ways (i.e., individual window control, floor control, total building control, etc.) to meet the requirements of your customers.

The IGC-II and IGC-II/3N1 controllers are also compatible with X10 power line transmission technology. When the IGC-II is used with the SOMFY X10 system, it is possible (without additional wiring) to control motorized coverings as well as other X10 compatible devices.

MECHANICAL SPECIFICATIONS

Overall Dimensions: IGC-II: L: 6 in. W: 8 in. D: 4 in.

IGC-II/3N1: L: 6 in. W: 10 in. D: 4 in.

ELECTRICAL SPECIFICATIONS

Voltage Ratings:

IGC-II: INPUT:
Line Voltage: 115 VAC +/- 10% 50/60 Hz
Low Voltage: 12 VDC 90mA maximum consumption

OUTPUT: 115 VAC 5A 1/4HP
Fuse 5A

IGC-II/3N1 INPUT:
Line Voltage: 115 VAC +/- 10% 50/60 Hz
Low Voltage: 12 VDC 185mA maximum consumption

OUTPUT: 115 VAC 15A (5A per motor)
Fuse 3 X 5A

Approvals:

Both the IGC-II and IGC-II/3N1 conform to UL508 standard for industrial controls.
Complies with the National Electrical Code Standards (NEC).

IGC SUB-GROUP CONTROL

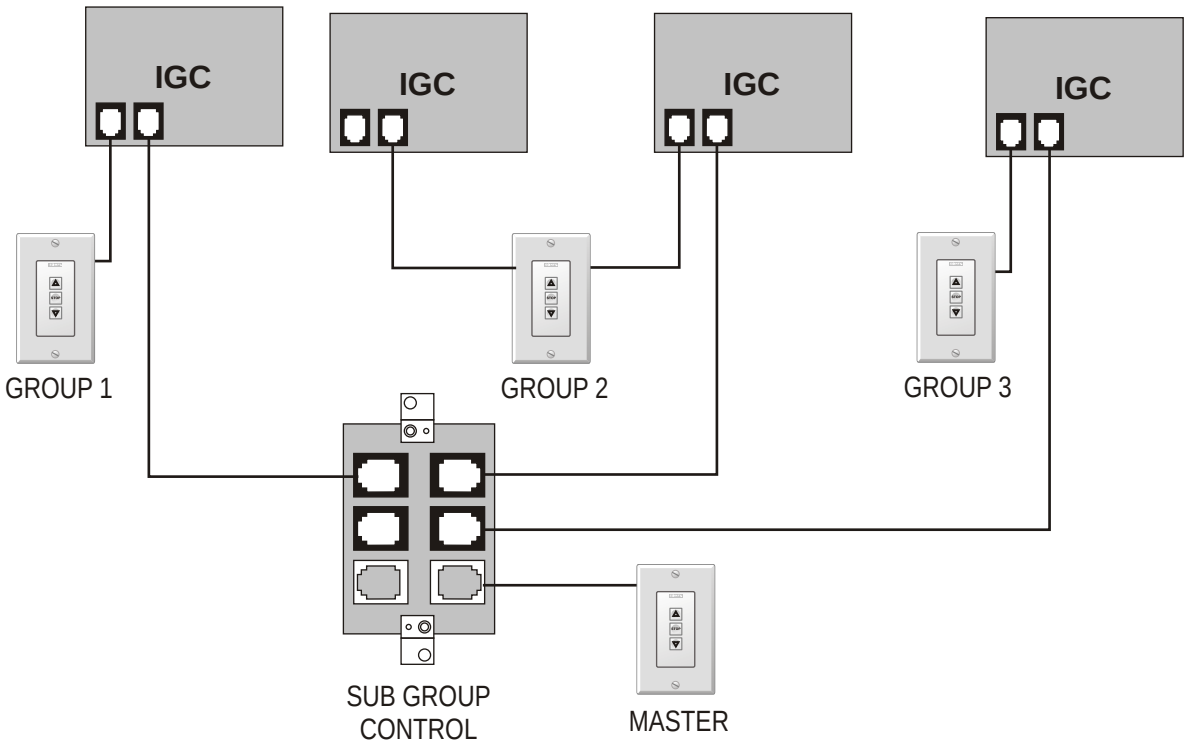
DESCRIPTION

The SubGroup controller is designed for use with Somfy's IGC or IGC-II controls. It allows for master or group control of a number of IGC controls from a single switch while still maintaining independent operation of each control or group.

Cat. No. 6300715

- Mounts in single gang box
- Sub-groups operate independantly
- Master line activates all sub-groups
- Only one level of sub-grouping is possible Do not connect a sub-group port of one sub-group control to a master port of another sub-group control. If multi-level sub-grouping is needed, it must be done at the IGC controls.

TYPICAL APPLICATION



MODULINE SYSTEM

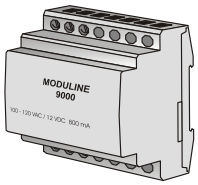
DESCRIPTION

The Moduline system features individual and group controls built into standard DIN casings which are attached to DIN rails in a cabinet. The system includes modules for individual, group and master control.
A preassembled control system of Moduline components can be built to meet your specifications. The Moduline system requires minimal wiring and reduced troubleshooting and maintenance times. It offers an integrated and organized means for controlling SOMFY motors.

SYSTEM COMPONENTS

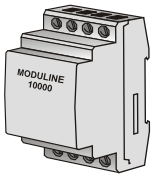
Supply/General Control
MODULINE 9000

The Moduline 9000 supplies power and master control for up to 15 individual controls that are connected to its right side.



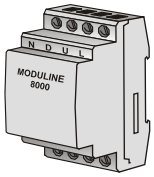
Sub Group Control
MODULINE 10000

The Moduline 10000 allows group operation of a number of Individual controls from a single switch. This module will control any Moduline connected on its right side.



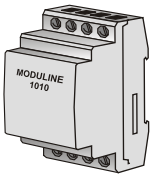
Individual Control
MODULINE 8000

This device provides individual control of a window treatment. It communicates with other modules, such as the 9000, that are connected in line with it.



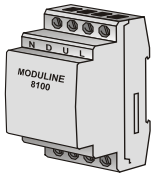
Sun and Wind Interface
MODULINE 1010

This module interfaces with a Sun and Wind Sensor to provide shading from the sun and protection from the wind automatically.



Individual Control for Horizontal Blinds
MODULINE 8100

This module provides individual control of a horizontal blind. It is specifically designed to provide both lift and tilt capabilities.



SPECIFICATIONS

MODULINE 9000
Electrical Specifications: INPUT: 120 VAC 50/60 Hz OUTPUT: 12VDC, 0.5A (to bus line)
Mechanical Specifications: L: 2 $^{4}/_{5}$ in. W: 3 $^{2}/_{5}$ in. D: 2 $^{1}/_{2}$ in.

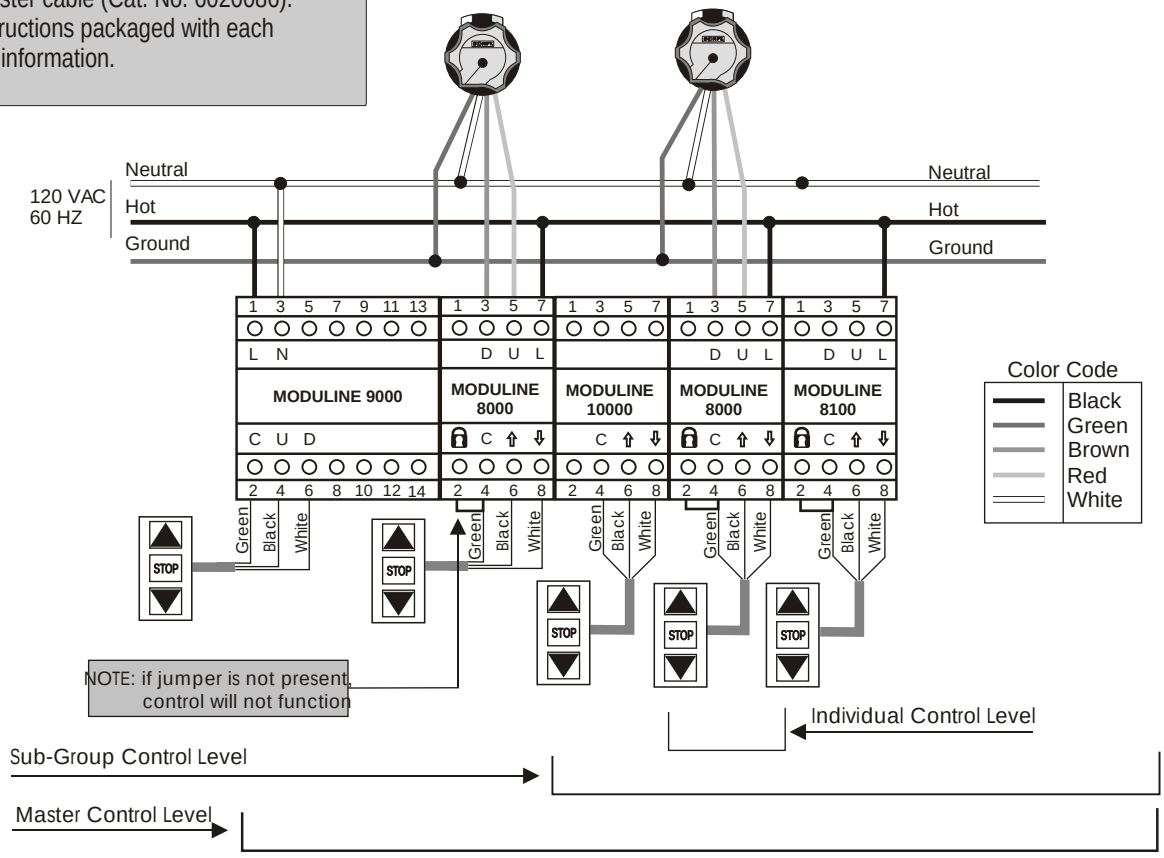
MODULINE 8000 & 8100
Electrical Specifications: INPUT: 12 VDC (from Moduline 9000); OUTPUT: 120 VAC 5A
Mechanical Specifications: L: 1 $^{2}/_{5}$ in. W: 3 $^{2}/_{5}$ in. D: 2 $^{1}/_{2}$ in.

MODULINE 10000
Electrical Specifications: INPUT: 12 VDC (from Moduline 9000)
Mechanical Specifications: L: 1 $^{2}/_{5}$ in. W: 3 $^{2}/_{5}$ in. H: 2 $^{1}/_{2}$ in.

MODULINE 1010
Mechanical Specifications: L: 1 $^{2}/_{5}$ in. W: 3 $^{2}/_{5}$ in. H: 2 $^{1}/_{2}$ in.

TYPICAL MODULINE WIRING DIAGRAM

CAUTION: Before continuing with the line voltage wiring instructions, the up and down limits of each motor should be set using the SOMFY tester cable (Cat. No. 6020086). Refer to limit switch instructions packaged with each SOMFY motor for more information.



OPERATING PROCEDURES

A. Individual Motor Operation

A single motor can be controlled by a Moduline 8000 from its corresponding switch. To activate either direction, momentarily depress the button corresponding to the desired direction. A single motor can be stopped in any position by depressing the stop button.

B. Subgroup Operation

A group of motors can be controlled by connecting Moduline 8000s to the right of a Moduline 10000. When the switch connected to the Moduline 10000 is depressed, all Moduline 8000s in the subgroup (up to the next Moduline 10000) will be activated.

C. Master Control

All the motors (Up to 15 Moduline 8000s) in a system can be controlled and operated by a single switch connected to a Moduline 9000. To activate any direction, momentarily depress the corresponding button. The motors can be stopped in any position by depressing the stop button.

DECORATOR SOMFY-MATIC ™ (DSM)

DESCRIPTION

The Decorator Somfy-Matic™ (DSM) enables a retractable awning to provide shading from the sun and protection from the wind automatically and conveniently. The DSM combined sun and wind sensor continually monitors sun intensity and wind speed, triggering the control unit to extend or retract the awning as needed.

The Decorator Somfy-Matic™ features advanced circuitry that assures factory preset accuracy and proven reliability. It aids in protecting furniture and carpeting from fading and saves on heating and air conditioning costs. With its sleek design, the DSM will complement any home decor. Combine this with the capability of being linked to SOMFY'S Group Control and IGC systems, and you've got the most flexible product on the market today!

MECHANICAL SPECIFICATIONS

Overall Dimensions: L: $3\ ^{1}/_{2}$ in. W: $2\ ^{3}/_{4}$ in. D: $1\ ^{1}/_{3}$ in.
Operating temperature range: -20 °C to 50 °C (-5 °F to 120 °F)
Wind Speed: From 12 to 31 mph
Fits in most 2 gang electrical boxes

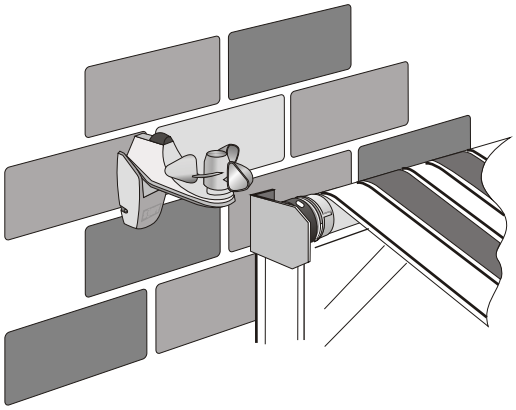
ELECTRICAL SPECIFICATIONS

Voltage Rating:

Single Motor:	INPUT:	115 VAC +/- 10%	50/60Hz	
	OUTPUT:	115 VAC	1/4 HP	5A
IGC/GCS II:	INPUT:	12-15 VDC	150 mA	(Supplied by IGC or GCS II)
	OUTPUT:	12-15 VDC	100 mA	Open Collector

Approvals:
The DSM Single Motor Control is approved per UL508 for industrial controls (UL, cUL);
Conforms to the National Electrical Code Standards (NEC)

INSTALLATION PROCEDURES



1. With power off, connect high and low voltage wires according to the wiring diagram. Test the wiring by pressing the DOWN button on the control. If the awning does not extend, or the screen does not lower, turn off power and reverse the red and black wires at the motor. FAILURE TO CORRECT THIS ERROR WILL CAUSE SERIOUS DAMAGE TO THE MOTOR OR AWNING BY EXTENDING IT DURING WINDY CONDITIONS.

2. The combined sensor should be placed close to the awning or shading system to make sure the wind speed and sun light is measured at the product. Guard against installing the sensor too close to an obstruction such as a chimney, gutter or under the awning itself. It should also not be mounted in the shade or be obstructed by trees. It may be necessary to reposition the sensor to get the best possible sun and wind readings. The sensor should not be more than 100 feet from the control. Remove the back cover of the sensor and connect the three wire cable (included) from the terminals on the sensor to the terminals on the control.

OPERATING PROCEDURES

1. Pressing the UP button will move the awning in, while the DOWN button will extend the awning when pressed. If a motor does not move in the correct direction, turn off the circuit breaker(s) and reverse the red and black wires at the corresponding motor(s). FAILURE TO CORRECT THIS ERROR WILL CAUSE AWNING TO EXTEND DURING WINDY CONDITIONS AND MAY CAUSE SERIOUS DAMAGE.
2. Pressing the STOP button will stop the motor(s) in its present position.
3. When the monitored sun intensity is greater than the DSM setting, the DOWN direction will activate after 3.5 minutes. The sun LED will remain on for as long as this condition exists. If the sun intensity is less than the DSM setting, the UP direction will activate after 12 minutes (if the auto LED is illuminated). The sun LED will blink during this period.
4. When the monitored wind speed is greater than the DSM setting, the UP direction will activate after 2 seconds. The wind LED will remain on as long as this condition exists. When the wind speed drops below the set value, the DSM will return to normal mode after 15 minutes. The wind LED will blink and the motors are prevented from operating during this period.
5. When the AUTO button is pressed, the AUTO LED will turn on or off depending on its previous status. Manual mode is designated by the LED being off. If the DSM is in manual mode, the sun level has no influence on motor control. The wind speed is constantly monitored and acted on regardless of AUTO setting. Manual operation will override automatic control for one full cycle. To reset, press the auto button OFF and ON.

DSM WIRING DIAGRAM

CAUTION: Before continuing with the line voltage wiring instructions, the up and down limits of each motor should be set using the SOMFY tester cable (Cat. No. 6020086). Refer to limit switch instructions packaged with each SOMFY motor for more information.

NOTE: When using a GCS II, the sun and wind sensors can be connected to the GCS II instead of the DSM if convenient.
