Steel City News

Headline of 2011

**Introducing
HARDCORE
Solid Granite
Table & Fence Systems
on Selected
Steel City Machines**

Table & Fences made of solid granite. It makes perfect sense if you think about it. Granite is harder than stainless steel. It absorbs vibration better. It will never rust, spring, twist or warp. It resists stains. And it provides a seamless, continuous work surface. With other new features, including cabinet saws with riving knife guard system & jointers with the largest, flattest fence and beds available, you could say we've entered a new era in the manufacturing of woodworking tools.

\$605.07 LIST

Steel City planers and jointers are equipped with our patented Helical cutterhead. The patented two sided HSS cutting tips will reduce hairlines by having the cutting tip slightly overlapping one another. This feature as well as the cutting tip having a sharper angle to them will give an outstanding finish.

COST EFFICIENT

Patented Segmented cutter-head design = Most cost effective Spiral cutter-head in the market. Rotational Cutting Tips.

EXTENDED LIFE CYCLE

Patented knife angle of attack (not achievable in Tungsten Carbide Tip), which causes less amperage draw and extends average life for the motor.

WORK ENVIRONMENT

Much quieter than a straight knife & Tungsten Carbide Tip cutter-head.

ROBUST

Accu-Head-HSS tips are less likely to break under extreme load or cutting applications when compared to Tungsten Carbide Tips due to the material characteristic difference.

PERFORMANCE

Breaks wood chips into smaller pieces to facilitate extraction / dust collection.
