SAFETY INFORMATION

Concerning OSHA Requirements

OSHA sets minimum national requirements for the use of ladders in business and industry. In addition, many states have their own regulations under the Occupational Safety and Health Act that may be even more stringent. The state codes will supersede the national OSHA standards within their own state. Users should check with their own state OSHA representative for the appropriate requirements.

The adequacy of ladders and the work practices followed by employees using them are regulated by OSHA in four sections: Portable Wood (1910.25), Portable Metal (1910.26), Fixed Ladders (1910.27) and ladders used in Construction Industry (1926.1053). These sections specify the standards to which all portable ladders must be manufactured, care and placement of ladders in the workplace and the safe use of ladders on the job.

Concerning ANSI Requirements

Depending on the material and type of ladder, different ANSI safety codes apply. The ANSI codes are as follows:

Wood Ladder	ANSI A14.1
Metal Ladder	ANSI A14.2
Fixed Ladder	ANSI A14.3
Fiberglass Ladder	ANSI A14.5

ANSI codes also have an established Duty Rating. This rating identifies which portable Ladder is intended for the conditions under which the ladder can be safely used. The Duty Rating system is as follows:

Type	Capable of Supporting	Rated Use
TYPE 1A	300 lbs.	Extra Heavy Duty Industrial
TYPE 1	250 lbs.	Heavy Duty Industrial
TYPE II	225 lbs.	Medium Duty Commercial
TYPE III	200 lbs.	Light Duty Household

Extensive testing and design requirements determine the appropriate Duty Rating for each ladder model. The rated load capacity includes the combined weight of the user, clothing, tools and any materials on the ladder. The tests requirements have been specified with a safety factor of four to ensure the ability of the ladder to meet the Duty Rating. However, the ratings assume proper use of the ladder (especially relating to the placement angle) in order to support the specified load.

General Ladder Safety

A ladder is a tool like any other. If it is used properly and according to safety guidelines, it will give many years of trouble free service. However, if proper cautions are not taken, a ladder can be involved in an accident. Please read and follow all instructions and labels accompanying each ladder.

Two factors that deserve particular attention are proper ladder selection and electrical shock precautions:

Pay close attention to the Duty Rating of the ladder and the combined weight of the user and materials. Select a ladder with the proper capacity. Also, be sure to select a ladder of proper height to reach the work area without overextending.

Be aware of wires, electrical devices and live electrical circuits. Metal ladders conduct electricity and can create a danger of electrocution. Failure to read and follow instructions regarding electrical safety could result in serious personal injury or death.

Inspection Before Each Use

1. Inspect upon receipt and before each use. Never climb a damaged, bent or broken ladder all working parts must be in good working order.
2. Make sure all rivets and joints, nuts and bolts are tight; feet, steps and rungs are secure; spreaders and pail shelf function properly (on step ladders); and rung locks, rope and pulley are in good condition (on extension ladders).
3. Keep ladder clean, free from grease, oil, mud, snow, wet paint and other slippery material. Keep your shoes clean. Leather soles should not be used.
4. Never make temporary repairs of damaged or missing parts.
5. Destroy ladder if damaged, worn or if exposed to fire or chemical corrosion.

General Precautions Before Each Use

1. Read the instructions printed on the ladder and follow them. Ladders are designed for one person. Exceptions are Double Front Step Ladders, which may be used by two people, one on each side. Duty Ratings still apply for each side and should be carefully observed.
2. Never leave a ladder set up and unattended. Special care should be taken to keep children away from all ladders.
3. If you anticipate the use of chemicals or other possibly corrosive materials, the ladder manufacturer should be consulted before use.
4. If you are in poor health, subject to fainting spells, have physical handicap that would impair your climbing ability, or if you are under the influence of any drugs or alcohol (including legal drugs that may cause drowsiness), you should not use a ladder.

5. Do not use in high winds or during a storm.
6. Stay focused on safety whenever you are on the ladder, and keep your body weight between the rails.

Proper Care & Storage of Ladders

1. Store ladders in a safe, dry place.
2. Hang ladders on racks, at intervals of 6 feet for support.
3. Properly secure and support ladders while in transit.
4. Keep ladders clean and free of foreign materials.
5. Never store materials on ladders.

Step Ladders - Proper Set Up

1. **DANGER! Metal Conducts Electricity!** Do not let ladders of any material come in contact with live electrical wires.
2. Make sure ladder is fully open, spreaders secure, and pail shelf in position.
3. Place on firm level surface with a secure footing. Do not use on slippery surfaces. Do not place on boxes, unstable bases or scaffolds to gain additional height. Do not place in front of door opening toward ladder.

Proper Climbing & Use

1. Face ladder when climbing up or down, keep body centered between side rails.
2. Maintain a firm grip. Use both hands in climbing.
3. Never climb a ladder from the side unless ladder is secure against side wise motion, or climb from one ladder to another.
4. Do not over reach, move ladder when needed.
5. Do not "walk" or "jog" ladder when standing on it.
6. Do not stand climb or sit on ladder top, pail shelf, braces, or back section.
7. Do not overload, ladders are meant for one person. Do not use as a brace, platform or plank.
8. Keep ladder close to work, avoid pushing or pulling off the side of ladders.

Extension Ladders - Proper Set Up

1. **DANGER! Metal Conducts Electricity!** Do not let ladders of any material come in contact with live electrical wires.
2. Secure base when raising extension and never set up ladder when it is extended.
3. Set single or extension ladder at proper 75-1/2 degree angle by bracing ladder base a distance of 1/4 total working length of ladder away from base of vertical support. If distance is less than 3 ft. place base of ladder a minimum of 3 ft. from vertical support.
4. Set ladder on firm ground. Do not lean sideways. Do not use on ice or snow or slippery or slippery surface without non-skid device or securing feet.
5. Erect ladder with minimum 3 ft. extending above roof line or working surface, the top at support points.
6. Extend top section only from ground, never by "bouncing" or from the roof.
7. So not overextend - maintain maximum required overlap of sections as follows:
Ladder size up to and including 32' - 3' overlap
Ladder size over 32' up to and including 36' - 4' overlap
Ladder size over 36' up to and including 48' - 5' overlap
Ladder size over 48' - 6' overlap
8. Place on a firm surface and secure footing. Do not use on slippery surfaces. Do not place on boxes, unstable bases or scaffolds to gain additional height.
9. Do not place in front of door opening toward ladder.
10. Where possible, use second person to hold ladder.

Proper Climbing & Use

1. Securely engage ladder rung locks before climbing. Check that top and bottom ends of ladder rails are firmly supported.
2. Face ladder when climbing up or down; keep body centered between rails.
3. Maintain a firm grip. Use both hands in climbing.
4. Never climb a ladder from the side unless ladder is secured against side wise motion, or climb from one ladder to another.
5. Do not stand closer than 3 ft. from the top. Never climb above the top support.
6. Do not use ladder in high winds.
7. Never use ladder as a platform, plank or hoist. Never use ladder as a scaffold.
8. Do not overload. Ladders are meant for one person.
9. Keep ladder close to work; avoid pushing or pulling off to the side of ladders.
10. Never drop or apply an impact load to ladder.
11. Do not "walk" or "shift" ladder when standing on it.

SUNSET TYPE 1 - 250 LB. DUTY RATED FIBERGLASS STEPLADDERS

"The Mesa"

SUNSET TYPE 1A-300 LB.DUTY RATED WOOD EXTENSION TRESTLE LADDERS

Slide Guides & Spreader Braces

Plated steel spreader braces interlock with the bottom pair of fly section slide guides.

Heavy Trestle Top Hinge

Extra heavy plated steel strap hinges form top of trestle and support slide guides for the fly section.

Rail Dimensions

Trestle front and back legs and fly section rails are constructed of 1-3/8" x 2-3/4" hemlock.

Locking Bail

Hinged steel bail provides easy to use solution for locking the fly section in place. Fly section can be raised or lowered in 12" increments without closing the trestle.

ACCESSORIES

EXTRUDED RUBBER FEET

An extremely fine, step ladder, easily installed. Non-marking. Furnished in sets of four.

HEAVY DUTY SHOES 1-3/8"

For single and extension ladders

HEAVY DUTY SHOES 15/16"

For step ladders

SLIP-ON BOOTS

Heavy all rubber non-skid shoes.

EXTENSION SHOE

Reinforced neoprene. Ladder rail must be shaped to fit. Furnished in pairs. 1" and 1-1/4" width. Specify width when ordering.

STEP LADDER SHOE KITS

LADMIT

Prevents ladder marks. Fits most wood and aluminum ladders.

ROPE & PULLEY

All aluminum 1-1/4" pulley with 5/16" non-rotting polypropylene rope for all weather performance.

RUNG LOCK REPLACEMENT KIT

Pairs Only

REPLACEMENT PLASTIC FLIPPER KIT

STEPLADDER TOP

STEPLADDER SPREADER BRACES

OPTIONAL SHELF FOR FIBERGLASS AND ALUMINUM STEPLADDERS

EXTENSION AND SINGLE LADDER SWIVEL SHOES

FOLDING STEEL LADDER HOOK

Bolts to ends of extension and single ladders. Folds inside ladder rails when not in use. Approximately 6" opening. Two hooks per set. Steel, 5 lbs. pr.

COMBINATION POLE GRIP & CABLE HOOK

A rigid plated "V" shaped pole grip covered with rubber tread, combined with cable hook assembly.

QUICKCLICK™ STABILIZER

MANUAL ADJUSTING LEVELLERS

Manually - operated ladder levellers can be field mounted on most types of extension ladders. Features include a safety guard and 11" adjustment.

AUTOMATIC - ADJUSTING LEVELLER (FIBERGLASS & ALUMINUM LADDERS ONLY)

Leveller keeps ladder stabilized in perpendicular position on uneven terrain. Adjustable up to a 9" height differential.

Little Giant Ladder Systems®

The Little Giant Ladder Systems® are durable, portable and versatile. They are small, compact and one ladder can do the job of many conventional ladders.

Accessories For The Little Giant Ladder System

- Model No. 10106 Leg Leveler for Aluminum Ladder System – Attaches easily to either ladder rail
- Model No. 10111ST Wall Standoff – Positions ladder away from working surfaces
- Model No. 10104 Work Platform
- Model No. 10606 Leg Leveler for Fiberglass Ladder System – Attaches easily to either ladder rail

MXZ Ladder System

The extra tall Little Giant MXZ Telescoping A-Frame Ladder replaces several sizes of stepladders. The ladder may be adjusted to fit safely on stairs and other uneven surfaces, and stores in half of its fully extended A-frame height. Ideal for areas with high ceilings, tight storage, and narrow entries. It comes with skid resistant feet and flared legs for improved stability.

LITTLE GIANT® ULTRA-LITE LADDERS

Little Giant® Ultra-Lite Fiberglass Type 1A Specifications

Model Number	Description Type 1A	Extension Height	Stepladder Height	Scaffolding Height	Storage Height	Weight
10717	Model 17	9'-15'	4'-7"	4'	47"	39 lbs.
10722	Model 22	11'-19'	5'-9"	5'	57"	47 lbs.

The Little Giant® Ultra-Lite ladder is a truly progressive ladder. The ladder is the only ladder on the market that is made from a special resin that is non-conductive and allows the ladder to be lighter and stronger than conventional fiberglass material. The Little Giant® Ultra-Lite ladder is a type 1A ladder that is rated at 300 lbs. The Ultra-Lite comes in 17-foot and 22-foot models. This ladder will cover any job from changing a light bulb to heavy-duty commercial use. The Little Giant® Ultra-Lite ladder has a one-year warranty on workmanship and materials.

The all new solid hinge design on the Little Giant® Ultra-lite ladder is revolutionary. The design has evolved from five generations of Little Giant® hinges. The continuation of material makes it the most solid and strongest hinge to date. This new design makes it the safest and most technically advanced hinge on any ladder in the market today. Patents pending

MODEL AP 7500 SERIES

Plywood and Aluminum decks for steel scaffolds available for construction or general maintenance work. May be used end to end in continuous lengths or as single units.

The plywood deck is notched in the center for easy installation around vertical post.

Heavy duty 1/2" exterior grade plywood deck fastened with special rivets. Deck is easily replaced.

NAIL LOCK

Heavy duty Hook Reinforcement plates help withstand abusive loads
Hook Lock Clamp... Fits easily in place, makes erection easier. Offsets hooks allow in-line installation.

SCAFFOLDING SAFETY RULES

As Recommended by SCAFFOLDING AND SHORING INSTITUTE (See Separate Shoring Safety Rules)

Following are some common sense rules designed to promote safety in the use of steel scaffolding. These rules are illustrative and suggestive only, and are intended to deal only with some of many practices and conditions encountered in the use of scaffolding. The rules do not purport to be all-inclusive or to supplant or replace other additional safety and precautionary measures to cover usual or unusual conditions. They are not intended to conflict with, or supersede, any state, local, or federal statute or regulation; reference to such specific provisions should be made by the user. (See Rule II.)

I. **POST THESE SCAFFOLDING SAFETY RULES** in a conspicuous place and be sure that all persons who erect, dismantle or use scaffolding are aware of them.

II. **FOLLOW ALL STATE, LOCAL AND FEDERAL CODES, ORDINANCES AND REGULATIONS** pertaining to scaffolding.

III. **INSPECT ALL EQUIPMENT BEFORE USING** – Never use any equipment that is damaged or deteriorated in any way.

IV. **KEEP ALL EQUIPMENT IN GOOD REPAIR.**

V. **INSPECT ERECTED SCAFFOLDS REGULARLY** to be sure that they are maintained in safe condition.

VI. **CONSULT YOUR SCAFFOLDING SUPPLIER WHEN IN DOUBT** – scaffolding is his business. **NEVER TAKE CHANCES.**

A. **PROVIDE ADEQUATE SILLS** for scaffold post and use base plates.

B. **USE ADJUSTING SCREWS** instead of blocking to adjust to uneven grade conditions.

C. **PLUMB AND LEVEL ALL SCAFFOLDS** as the erection proceeds. Do not force braces to fit - level the scaffold until proper fit can be made easily.

D. **FASTEN ALL BRACES SECURELY.**

E. **DO NOT CLIMB CROSS BRACES.** An access (climbing) ladder, access steps, frame designed to be climbed or equivalent safe access to the scaffold shall be used.

F. **ON WALL SCAFFOLDS PLACE AND MAINTAIN ANCHORS** securely between structure and scaffold at least every 30' of length and 25' of height.

G. **WHEN SCAFFOLDS ARE TO BE PARTIALLY OR FULLY ENCLOSED**, specific precautions must be taken to assure frequency and adequacy of ties attaching the scaffolding to the building due to increased load conditions resulting from effects of wind and weather. The scaffolding components to which the ties are attached must also be checked for additional loads.

H. **FREE STANDING SCAFFOLD TOWERS MUST BE RE-STRAINED FROM TIPPING** by guying or other means.

I. **EQUIP ALL PLANKED OR STAGED AREAS** with proper guardrails, midrails and toeboards along all open sides and ends of scaffold platforms.

J. **POWER LINES NEAR SCAFFOLDS** are dangerous - use caution and consult the power service company for advice.

K. **DO NOT USE** ladders or makeshift devices on top of scaffolds to increase the height.

L. **DO NOT OVERLOAD SCAFFOLDS.**

M. **PLANKING:**

1. Use only lumber that is properly inspected and graded as scaffold plank.

2. Planking shall have at least 12" of overlap and extend 6" beyond center of support, or be cleated at both ends to prevent sliding of supports.

3. Fabricated scaffold planks and platforms unless cleated or restrained by hooks shall extend over their end supports not less than 6" nor more than 12".

4. Secure plank to scaffold when necessary.

N. **FOR ROLLING SCAFFOLD THE FOLLOWING ADDITIONAL RULES APPLY:**

1. **DO NOT RIDE ROLLING SCAFFOLDS.**

2. **SECURE OR REMOVE ALL MATERIAL AND EQUIPMENT** from platform before moving scaffold.

3. **CASTER BRAKES MUST BE APPLIED** at all times when scaffolds are not being moved.

4. **CASTERS WITH PLAIN STEMS** shall be attached to the panel or adjustment screw by pins or other suitable means.

5. **DO NOT ATTEMPT TO MOVE A ROLLING SCAFFOLD WITHOUT SUFFICIENT HELP** – watch out for holes in floor and overhead obstructions.

6. **DO NOT EXTEND ADJUSTING SCREWS ON ROLLING SCAFFOLDS MORE THAN 12".**

7. **USE HORIZONTAL DIAGONAL BRACING** near the bottom and at 20' intervals measured from rolling surface.

8. **DO NOT USE BRACKETS ON ROLLING SCAFFOLDS** without consideration of overturning effect.

9. **THE WORKING PLATFORM HEIGHT OF A ROLLING SCAFFOLD** must not exceed four times the smallest base dimension unless guyed or otherwise stabilized.

O. **For "PUTLOGS" and "TRUSSES"** the following additional rules apply:

1. **DO NOT CANTILEVER OR EXTEND PUTLOGS /TRUSSES** as side brackets without thorough consideration for loads to be applied.

2. **PUTLOGS/TRUSSES SHOULD EXTEND AT LEAST 6"** beyond point of support.

3. **PLACE PROPER BRACING BETWEEN PUTLOGS/TRUSSES** when the span of putlog/truss is more than 12".

P. **ALL BRACKETS** shall be seated correctly with side brackets parallel to the frames and end brackets at 90 degrees to the frames. Brackets (except mobile brackets designed to carry materials) are to be used as work platforms only and shall not be used for storage of material or equipment.

Q. **ALL SCAFFOLDING ACCESSORIES** shall be used and installed in accordance with the manufacturers recommended procedure. Accessories shall not be altered in the field. Scaffolds, frames and their components, manufactured by different companies shall not be intermixed.

Choosing the Best System

Werner's Aluminum scaffolding is now available to order in three convenient ways:

• Towers • Sections • Components

Werner's complete line of scaffold products is now available as completed scaffold towers in various heights for easy ordering, scaffold sections for added convenience, and in individual component form for total versatility. As always, Werner's aluminum scaffolding is lightweight, durable, and narrow span scaffolding easily fits through doorways.

Towers, Sections, Components:

Towers: Werner's scaffold towers are easy and convenient to order. Available in standard 6', 8', and 10' lengths with platform heights up to 23', these are available as 29" wide Narrow Span towers, 4-1/2' wide Wide Span towers, and as Stairway towers. Each of these towers is shipped complete with outriggers, guard rails, toe boards, and planks with access doors which allow the user to climb the tower from the inside.

Sections: Scaffold sections allow the user to easily add height to an existing scaffold tower. Available in standard 6', 8', and 10' lengths and as 29" wide Narrow Span sections, 4-1/2' wide Wide Span sections, and Stairway sections. Each section is shipped complete with all necessary components.

Components: Individual scaffold components provide the most flexibility during installation by allowing the user to easily convert to different lengths or heights. All components are available separately for 29" wide Narrow Span scaffolds, 4-1/2' wide Wide Span scaffolds and for Stairway scaffolds.

Where Are Scaffolds Used?

Scaffold Towers are used for many applications, including the following:

- Painting
- Window and Facade Cleaning
- Remodeling
- Drywall Installation
- Rental Yards
- Schools and Hospitals
- Theatrical and Entertainment
- Building Maintenance

Which Scaffold Is Right For Me?

Ask yourself the following questions to consider your scaffold needs:

1. How much working surface do I need?

Choose the 4-1/2' wide Wide Span scaffold when space permits and the 29" wide Narrow Span scaffold when space is limited. Both are available in 6', 8', and 10' lengths.

2. Will the scaffold I'm working on have to straddle anything?

If the answer is yes, choose a hi-clearance base section.

3. Could I benefit from having stairway access inside my scaffold?

If the answer is yes, choose a stairway scaffold.

4. How high do I need to reach?

Remember that the maximum platform height is equal to 4x the smaller base section dimension of the scaffold or installed outrigger in most states except California, Oregon, Ohio, Montana, and Maine which require 3x and Washington which requires 3-1/2x. **EXAMPLE:** If you have a 4-1/2' x 6' base section, and work in California, your maximum platform height would be 13-1/2'. Please check your state and local codes for your particular specifications. Outriggers will be required for added height.

5. When do I need guard rails and toe boards?

The use of fall protection equipment is always recommended. Safety codes require guard rails and toe boards on all open sides when the platform height is 10' or more, and may be required at lower heights, depending on the application and jurisdiction. Check applicable ANSI, OSHA, state and local codes for specific requirements.

6. How heavy a load do I need to support?

If 25 lbs. per square foot or 500 lbs. maximum per deck and scaffold, choose any scaffold. If 25 lbs. per square foot or 500 lbs. maximum per deck and 1000 lbs. maximum per scaffold, choose a wide span scaffold. If 50 lbs. per square foot or 1300 lbs. maximum per scaffold, choose a stairway scaffold (except STHCB-U which is 650 lbs. maximum per scaffold).

Outstanding Aluminum Scaffold Features

Swedge-Master® Scaffold Joint Process & Snap-Hook Frame Lock:

Swedge-Master® Scaffold Joint Process:

- Provides consistently strong and tight internal and external joints
 - Allows easier inspection than welded joints
 - Standard on all vertical, diagonal and horizontal scaffold connections*
- *4000 Series Stairway joints are welded

Snap-Hook Frame Lock:

- Spring-loaded hook snaps on easily
- Releases manually
- Goes 3/4 of the way around the brace it hooks onto for increased stability

Interlock Pin Assembly:

Interlock Pin Assembly:

- Aluminum stacking pin securely joins upper and lower sections
- Slip-resistant strap keeps pin with scaffold

Snap-Up® Locking Mechanism:

Snap-Up® Locking Mechanism:

- Automatically locks when fully extended; easily unlocks by pushing on thumb release
- Corrosion-resistant "elbow latches"

Unlocked Position

Locked Position

Double Locking Leg:

Double Locking Leg:

- Provides quick and easy adjustment up to 9-1/2"
- Standard on all base sections

Unlocked Position

Locked Position

5" Ball Bearing Caster:

5" Ball Bearing Caster with 2-Way Lock:

- 2-way lock prevents rolling and swiveling
- Aldek® caster is rust resistant
- 8" caster (Kit #40-1) also available

Load Capacity: 25 lbs. per sq. ft. or 500 lbs. maximum per deck & scaffold.

Load Capacity: 25 lbs. per sq. ft. or maximum per scaffold.

Includes guard rails, outriggers*, toe boards, and planks with access doors to allow for climbing inside the scaffold.
 Maximum platform height for all Werner scaffold towers (except Model Nos. 4201-23 and 4101-23) is equal to 4x smaller base section dimension. The toe board height for all Werner scaffold towers is 4". Check state and local codes.
 All individual narrow & wide-span planks are 22" wide. All individual stairway boards are 24" wide.

BKE-BU6

ADVANTAGE

UTILITY SCAFFOLDS

FEATURES :

- Square, steel tubular frames are 29" wide and available in 6' and 8' lengths.

BKE-BU6

BKA-GU6

BKA-DU6

- Braces are designed to allow movement over lower obstacles.
- Guard rail system designed to stay at platform level at all times.
- Convenient locking system allows for quick and easy height adjustment.
- Plywood deck is reinforced with two steel supports underneath and surrounded with a steel frame.
- Compatible with other brands of utility scaffold.
- Packages are provided for ordering convenience and to meet specific job requirements.
- Units can be stacked for increased working heights.
- Platform adjusts in 4" increments. Each end can adjust separately to be used on both level surfaces and stairs.

Do not use this product in areas where user can come in contact with live power. The manufacturer reserves the right to modify product specifications without prior notice. Follow all applicable OSHA and ANSI Regulations and Codes for the use of this equipment. All photos and line drawings are used for illustration purposes only.

To specify modular toe board system, order Werner's Modular Guard Rail/Modular Toe Board System Slide Chart (GM6338) or contact your local Werner Sales Representative.

Medium Duty Telescoping Plank

The Little Giant Medium-Duty Telescoping Plank is available in 9, 13 and 16-foot sizes (fully extended). The plank is manufactured with heavy wall aluminum tubing to prevent the twisting and flexing common to most other planks. The built-in, skid-resistant surface reduces slips. It stores and transports in approximately half of its fully extended length and fits perfectly in the Little Giant Ladder System scaffolding set up.

The telescoping plank has the strength to do the job safely and the compactness to store easily after the work is done.

SPECIFICATIONS

Model No.	Description	Standard Extension	Width	Weight
10069	Plank 9'	6'0" to 9'0"	12 1/4"	32 lbs.
10813	Plank 13'	8'0" to 13'0"	12 1/4"	42 lbs.
11016	Plank 16'	10'0" to 16'0"	12 1/4"	53 lbs.

SUNSET - ALUMINIUM PLANKS & STAGES

ALUMINUM PLANKS, STAGES & MODULAR HANDRAIL/TOEBOARD SYSTEM

Sunset scaffold Planks and Stage Platforms are used with and without modular toe board and handrail systems or in conjunction with extension ladders and ladder jacks. Stage platforms have multiple applications as swing stages, bridges and catwalks.

Raised Tread & Open Pattern deck Design provides slip-resistant surface that reduces buildup of solids and liquids.

Interlocking handles permit continuous end-to-end positioning for easier and extended access.

Rail Ends handles - Full Width End Rung Grips provide for easy lifting and carrying.

Rigid I-Beams Side Rails provide best strength, weight and cost relationship.

Round Rung Cross Braces on top and bottom

Handles & Individual Deck Strips designed for easy replacement.

Important Design Features Make Sunset Aluminum Planks and Stage Systems More Durable, Flexible and Productive for Reaching Work

Modular Safety Handrail & Toeboard System is easy to install.

FULLY ASSEMBLED

- Rated 250# Per Ladder Jack
- No Busted Knuckles or Pinched Fingers
- Lightweight for Easy Handling
- Fits Inside and Outside Face of Ladder
- Will Accommodate up to 18" Plank
- To Be Used With Type I or IA Ladders

(Product's occupational use must conform with safe practices and federal, state and city codes).

*The ultimate in safety,
appearance & construction*

MOBILE LADDER STAND

- 1" dia. steel tube construction
- Ruggedly braced and reinforced
- Standard 12" deep top platform
- Solid mig welded construction
- BIG non-skid, non-marking shoes
- Safety green enamel finish
- 42" tall guardrails on 6-step and larger
- Meets CAL/OSHA requirements
- Meets Federal OSHA/ANSI requirements

Optional Features:

- Guard chain with snap for entry-exit on any side of platform
- Fold down shelves
- Narrow aisle models
- Custom handrail arrangement or height
- Extra deep platform in multiples of 12"

*Custom designs available
to meet your needs!*

Traction Tread (Standard Step)

Designed and manufactured to provide the optimum in safety, strength and appearance. Provides greater non-slip protection than diamond plate.

Diamond Plate (Optional Step)

Provides anti-slip protection through use of raised diamond shaped ribs on a fully closed step surface.

Safety Grating (Optional Step)

Provides maximum non-skid protection in wet and/or dry conditions.

HEAVY DUTY STEEL ROLLING WAREHOUSE LADDERS / GSX2400 SERIES (Knocked Down)

ALL SIZES MEET
OR EXCEED THE
REQUIREMENTS
OF ANSI A14.7 AND
OSHA 1910.29
STANDARDS WITH A
350 LB.
LOAD RATING

GSX2409 with
option #X09
shown

Super heavy duty ladders constructed for the most demanding requirements. Large ball bearing casters facilitate easy maneuvering. All models equipped with large swivel caster in front and rigid casters in the rear. Step on bottom step to activate and lock rubber tipped feet in down position. Step on unlocking pedal to unlock.

Forward Descent
50 degree climbing angle meets ANSI requirements for forward descent.

Tubular Construction
Massive 2" x 1" rectangular tubing base designed to reduce abusive damage.

Wide Steps
The 17" top step and large 8-1/2" steps make climbing and working easier.

Handrail & Guardrail
All units come standard with 1-1/16" OD high strength steel tube handrails and guardrails.

Bottom Landing Step
The 10" bottom step gives a larger surface to engage the locking mechanism.

Non Marring/Marking Casters
Each model is equipped with 4 ball bearing casters. The caster's material will not mark or mar the working surface.

Accessory: Unique Easy-Turn™ Design (#X09)
Louisville's exclusive Easy-Turn™ feature includes five strategically placed casters for easier mobility and maneuverability. The design allows the user to spin the entire platform on a dime.

HEAVY DUTY STEEL ROLLING WAREHOUSE LADDERS / GSX1600 SERIES (Knocked Down)

ALL SIZES MEET
OR EXCEED THE
REQUIREMENTS
OF ANSI A14.7 AND
OSHA 1910.29
STANDARDS WITH A
350 LB.
LOAD RATING

This super heavy duty ladder is constructed for the most demanding requirements, yet it is only 16" wide—the number one choice for narrow spaced industrial applications.

Tubular Construction
Massive 2" x 1" rectangular tubing base designed to reduce abusive damage.

Non Marring/Marking Casters
Each model is equipped with 4 ball bearing casters. The caster's material will not mark or mar the working surface.

Bottom Landing Step
The 10" bottom step gives a larger surface to engage the locking mechanism.

Forward Descent
50 degree climbing angle meets ANSI requirements for forward descent.

STEEL ROLLING WAREHOUSE LADDERS GSW SERIES (Knocked Down)

Louisville Ladder steel rolling warehouse ladders are considered one of the best on the market. Ladder equipped with ball bearing casters allowing easy movement to any area. Rugged all steel construction. Sturdy handrails, easy 56 degree climbing angle, "Sure Grip" tread, 7" deep steps and 10" deep top platform provide quality features for the everyday user.

ALL SIZES MEET OR EXCEED THE REQUIREMENTS OF ANSI A14.7 AND OSHA 1910.29 STANDARDS WITH A **350 LB. LOAD RATING**

Spring Loaded Casters (standard on 2-step to 5-step models) Four spring loaded casters on 2-5 step models. Casters retract when load is placed on the ladder, setting the ladder firmly in place on rubber tips. When the load is removed, springs push down the casters enabling the ladder to move about freely.

Locking Device (standard on 6-step to 15-step models) Models 6-step and taller come equipped with a large 4" swivel caster in front and rigid casters in the rear. Stepping on bottom step activates the locking mechanism, locking rubber tipped feet in down position. To move the ladder, just step on the unlocking pedal.

No Forward Descent
56 degree climbing angle does not meet ANSI requirements for forward descent.

Toeboard (standard on 12-step to 15-step models) The top platform on models 12-step and taller is surrounded on three sides by a 4" high toeboard. *Can be added as an option to smaller size models. (W05)*

Premium Powder Paint
Baked-on finish is durable and provides superior scratch and scuff resistance. Attractive, even coverage with no drips or runs.

OPTIONS & ACCESSORIES

Extra Deep Top
Standard top platform is 10" deep. 16" and 24" wide models can also be manufactured with an extra deep top platform measuring 20" or 30".
Accessory # W01 (20")
Accessory # W02 (30")

Spring Loaded Casters
(option for 1-step model only) 1-step model comes standard with four rubber tipped legs for stability. Also available with spring loaded casters like those used on 2-5 step models.
Accessory # W04

Handrail & Guardrail
Models 5-step and taller come standard with 30" handrails and 36" guard-rails on back. Also available on 3-4 step models.
Accessory #W03

Handrail and Outrigger
Required when local codes require 3:1 height to base ratio. (CAL OSHA)

ACCESS LADDERS

INDUSTRIAL • ALL STEEL ALL WELDED

Construction:

- 3/8" x 2 1/2" flat bar side rails
- 3/4" diameter round rungs
- 1 1/2" diameter round - 42" tall boarding rail
- Stand-off brackets on maximum 72" centers
- Heavy duty flat bar cage
- See back cover for available colors.
- Standard 18 inch wide rungs on 12 inch centers

Standard Installation Considerations: (As required by code)

- Cages are required on all access ladders of more than 20 feet to a maximum unbroken length of 30 feet
- Intermediate platforms or landings must be used at 30 foot intervals or fraction there of, when overall height exceeds 30 feet
- When intermediate platforms are used adjacent ladder sections are to be off-set.
- When exiting to the side at the top of the access ladder the ladder rungs will continue 4 feet above the platform.
- When exiting to the front at the top of the access ladder boarding rails shall extend 42 inches above the top rungs.

CREATE YOUR OWN MODEL NUMBER!

Available options:

- 36" x 36" intermediate platform
- Split stand-off brackets
- All aluminum access ladders
- Hot dipped galvanized finish
- Security door
- Cage bottom security hatch
- Flat diamond plate treads

ELK RIVER LANYARDS, BELTS, & HARNESSES

ConstructionPlus™ Harness

One D-ring ConstructionPlus™ Harness Sliding D-ring at center of back, Parachute-mating buckles on leg straps, Made of polyester.
Available Sizes: One Size
Part Number: 48103 (01809)

All Universal Series Full Body Harnesses include these Standard features and benefits:

Features	Benefits
1. Sliding back D-ring	Allows 100% tie off ground to ground
2. Full-strength chest strap	Increases reliability and safety
3. Seat strap	Provides maximum support
4. One size fits most workers	Reduces inventory requirements

CSA Classifications

Full body harnesses shall be classified as follows:

Group A	Group D	Group E
Fall Arresting	Controlled Descent	Confined Entry & Exit

Group L
Ladder Climbing

Group P
Worker Positioning

TowerMate LE Harness

Two D-ring TowerMate Harness
Sliding D-ring at center of back, Chest-high front D-ring.
Available Sizes: S-L, L-XL
Part Numbers: 56222 & 56224

Lanyards

NightHawk™ Roofer's Kit

NightHawk™ Roofer's Kit contains NightHawk™ Harness, 50' Hawkline Lifeline with Rope Grab and 2' ZORBER Shock-absorbing lanyard, single use anchor with fasteners, packaged in a five-gallon bucket.
Available Sizes: One Size Fits Most
Part Number 05003

Retractable Lanyards

Retractable Lanyards can be used in a wide range of work situations where extra mobility is required. Typically the mechanical device is anchored to an approved overhead anchorage to eliminate interference with ladders and vertical work areas.

Care should be taken to address the "pendulum" or "swing" action of the Fall Arrest (FA) when Retractable Lanyards are in use. **NOTE:** All Retractable Lanyards require carabiners.

Retractable Lanyards feature an internal sealed spring mechanism that allows normal controlled movement away from the device. The inertial disc brake system is activated by any sudden movement, accidental slip or fall. It functions much like a seat belt, once activated it stops the action of the fall. An energy absorber is built into the braking system and will stop a fall in less than one foot.

Some Retractable Lanyards are equipped with built-in retrieval systems and are designed to be used in rescue situations. They are **NOT** to be used as a winch. Once a unit has been used as a retrieval system, it must be recertified.

All units have a safe work load of 350 pounds total weight and are proof tested prior to being shipped from the factory. Any unit which fails a field test or is subjected to an actual fall arrest must be removed from service immediately and returned to the factory for recertification. No annual recertification is required for retractable lanyards.

**Annual Recertification Not Required
for Retractable Lanyards**

**Web Retractable Lanyard,
1' x 25', Available with
stainless aircraft cable.**

Part Number: 21225

**Galvanized Aircraft Cable
Retractable Lanyard,
3/16" x 25'. Available with
stainless aircraft cable.**

Part Number: 21402

**Galvanized Aircraft Cable
Recovery Retractable
Lanyard, 3/16" x 50'.**

Part Number: 21803

RETRACTAMAN Retractable Lanyard, 1-7/8" x 9', includes 17150 carabiner. RETRACTAMAN Retractable Lanyards are rated for Fall Arrest (FA), but once used in a fall must be retired from service. RETRACTAMAN Retractable Lanyards are NOT recertifiable.

Part Number: 21210

Portable Anchorage Connectors

D-ring Anchorage Eyebolt

Part Number: 13020

I-Beam Slider,
fits 3.5" to 12" wide beams,
horizontal only

Part Number: 13025

I-Beam Trolley Anchors

Fits 2-5/8" x 5-1/16" beam
Part Number: 13060

Fits 5-1/16" x 7-1/2" beam
Part Number: 13065

Elk River Roof Anchor: Reusable roof
peak anchor, Hinged at D-ring for
variable roof pitch applications, 32 -
2" x #10 wood screws included.

Part Number: 13050

Elk River Roof Anchor Single Use.
Eight wood screws included.

Part Number: 13055

Pipe Anchor Hooks

Pipe Anchor Hook, 3-1/4"

Part Number: 13500

Pipe Anchor Hook, 4-1/2"

Part Number: 13501

Pipe Anchor Hook, 5-3/4"

Part Number: 13502

Tie-off Slings

Tie-off slings are available in 12"
increments. See Price List.
3' and 6' lengths are the
most popular.

EZE-MAN Tie-off sling 12"

Part Number: 26770

EZE-MAN Tie-off sling 18"

Part Number: 26771

EZE-MAN Tie-off sling, 3'

Part Number: 26793
