Advanced Rotary Sensor

Best Suited for High-performance • Heavy-duty Applications

TAMAGAWA SEIKI CO.,LTD.

Fresh air and an abundance of industrious manpower...here is the base of cutting-edge technology.

Tamagawa seiki
Headquarters

〈100 selected pure bodies of water in Japan〉

Sarukura Springs

Sarukura Springs is located about 1 km northwest of Tamagawa Seiki. The water, designated as one of the 100 purest bodies of water in Japan by the Environment Agency, is well-known for its purity. It is more proof that this area is favored with a clean environment.

〈100 selected Avenues in Japan〉

Apple Avenue

A major fire in 1947 reduced the old residential and business section of Iida City Center to ashes. After the fire, apple trees were planted along a burnt mid-town avenue and nurtured devotedly by students of one of the town's junior high schools. Since then this 400 meter row of apple trees, among which are some trees derived from Newton's apple tree, have been proudly cultivated as a symbol of modern Iida City.

Features and Comparison of Encoders/Resolvers

Features of Encoders (for High-performance Applications)

Features

■ High resolution. Small diameter

- Incremental type : 3,000C/T with $\phi 35$ 6,000C/T with $\phi 48$ 8,192C/T with $\phi 60$
- Absolute type : 17 bit (131,072 division, 9.89 sec) with $\phi 35$ provided with multi-turn function.

■ Easy to interface

- Easy to control pulse output of encoders.

■ Fewer wires

(Absolute Type)

- Capable of wire-saving and high-speed data communication through serial transmission. Only 4~6 output wires for a 17 bit encoder.
- Capable of bus connection up to 8 encoders. (Not included in this catalog)

(Incremental Type)

- Output wires are minimized : 14 wires $\rightarrow$ 8 wires

■ Intelligent (Absolute Type)

- Provided with Fail-check function
- Provided with Zero position clear function

■ Compact·Miniaturized (Absolute Type)

- Systems can be compact by modular structure
- Extremely thin – only 18 mm in height

Comparison of encoders

Angular sensor	Encoder	
	Incremental	Absolute
Accuracy of absolute angle	◎ ~ $\pm 60''$	◎ ~ $\pm 80''$
Resolution	~10,000 C/T	17/33bit
Tracking rate	○ 6,000min ⁻¹	○ 6,000min ⁻¹
Structure	○	◎
Heat-resistance	○ -20°C ~ +85°C	○ -10°C ~ +85°C
Noise-resistance	◎	◎
Reliability	○	○

◎Excellent ○Satisfactory △Inferior

Features of Resolvers (for Heavy-duty Applications)

Features

■ Wide temperature range

- Operating temperature $-55 \sim +155^{\circ}\text{C}$

■ Robust against demanding environment

- Vibration 196m/s^2 {20G}
- Shock 980m/s^2 {100G}
- Humidity Relative humidity 90% Rh or more

■ High speed revolution

- $20,000\text{min}^{-1}$ {rpm} (Smartsyn[®])
(S-08 : $30,000\text{min}^{-1}$ {rpm})
- $30,000\text{min}^{-1}$ {rpm} (Singlsyn[®])

■ High reliability

- Resolvers have similar structure to electric motors. In particular, our Singlsyn[®] (a kind of resolver) has high reliability because no wire is coiled on its rotor.
- Free from maintenance because no bearing is used.

■ Sensing absolute position and velocity

- Capable of converting analog output signals of a resolver to digital position signals or velocity signals by connecting the resolver to Smartcoder[®] (Resolver to Digital converter).
- The position signals are transformed into absolute position output within a range of electrical one cycle.

■ Capable of corresponding to multi-polar type

■ Compact

- Realizes smallest mounting space because of its extremely thin dimensions. (S-15 : 16mm)

Comparison of resolvers

Permissible Dissipation	±200mW Max
Operating temperature	−20~+85°C
Storage temperature	−65~+150°C

■ System Connection

■ Outline

Installation of Encoders

- ① For dimensions of attaching sections, please refer to respective outlines.
- ② Regarding the installation for modular type encoders (Absolute encoders), please refer to the following manual.

TS5 6 6 8 : 8 0 1 3 0 0 1 1 3 E 5 0

TS5 6 6 9 : 8 0 1 3 0 0 1 1 6 E 5 0

- ③ In case of a hollow shaft encoder (Blind hole type and Through type)

After coupling the hollow shaft of the encoder with the drive shaft with

screws in a position where encoder flanges are easily fixed, fix the flanges.

If the flanges are fixed in a warped state, they will wear on the ball bearing and may cause damage to the mounting plate. Please apply "screw lock" to each screw.

- ④ Mounting tolerances

Radial 0.05mm TIR Max.

Axial $\pm 0.1\text{mm}$ Max.

Shaft runout 0.1° Max.

Adding undercut at a clamping section of the shaft set screw may cause shaft runout.

Radial

Axial

Shaft runout

Notice in Handling Encoders

An encoder is a precise instrument and it must be used with full understanding of the safety notes to maximize its performance.

The following is the gist of safety precautions :

(1) Safety notes on unpacking

- ① After opening the package, check the appearance of the encoder for any abnormality.
- ② In opening the package of encoders which are provided with flanges, do not give excessive force on the flanges.
- ③ Do not carry or shake the encoder by the leads.
- ④ In carrying the encoder, be careful not to jar it because such a shock can damage the quality of the encoder.

(2) Safety notes on installation

- ① Attach the encoder according to the handling manual. Take ample precaution against vibration, noise, attaching direction, ambience (temperature, humidity, dust) , etc.
- ② Never use the encoder in the presence of corrosive gas or liquid.
- ③ Never use the encoder in the presence of radiation.
- ④ In installing the encoder, do not give forcible impact to it.

(3) Safety notes on wiring

- ① Check the power supply and signal wires of the encoder.
- ② When miss-wiring or mis-operation of the encoder is made, replace the encoder with a new one because damage may remain in the old encoder.
- ③ Wire the power line of the motor and the power/signal wires of the encoder as far away from each other as possible in order to avoid noise mixing in.
(Do not wire them in the same duct.)

(4) Safety notes on pre-operation

- ① The earthing for a motor or an instrument which the encoder is attached to should be 100Ω or less.
- ② Never subject the encoder terminal to withstand a voltage test or a megger test.

(5) Safety notes on operation

- ① Be sure to use the encoder under the specified ambient temperature and relative humidity. (When the encoder is attached to a motor, the ambient temperature is the surface temperature of the motor frame and shaft.)
- ② Do not drop or splash any water or oil onto the products.
- ③ Consult us about the use of the encoder in a place with much vibration and shock.

Resolvers (Smartsyn®)

Outline (mm)

Wiring Diagram (Common to all models)

Please refer to page 23~24 for electric specifications, and page 30 for installation.

Model : AU6802N1

Features

- (1) Applicable to all of our resolvers. (1 phase excitation 2 phase output)
- (2) Vehicle-mount quality
 - Quality level : Transportation equipment involved in safety
 - Operating temperature range : $-40 \sim +125^{\circ}\text{C}$
- (3) High accuracy
- (4) Simple to use
 - Real time output (High tracking rate : $240,000\text{min}^{-1}/10\text{bit}$ resolution)
 - Single power supply of DC5V (Integrated oscillator for exciting resolver : $10/20\text{KHz}$)
 - Small size and light weight ($10 \times 10\text{mm}$, pin interval : 0.65mm , 52pin TQFP, Mass 0.3g)
 - Built-in test (Internal error detection) function
 - Pulse / Parallel / Bus + Serial output (Selectable)
 - Capable of setting a number of poles for UVW (Selectable from $\times 1,2,3,4$)
 - Clock input (20MHz) : External CLK input / Crystal resonator / Ceramic resonator (Selectable)
 - Resolution of $10/12$ bit (Selectable)

Outline

Specifications

Output form	Binary code parallel 10/12 bit bus compatible, positive logic	
Resolution	1,024 (2^{10})	4,096 (2^{12})
Tracking rate	$240,000\text{min}^{-1}$	$60,000\text{min}^{-1}$
Conversion accuracy	$\pm 2\text{LSB}$	$\pm 4\text{LSB}$ (2^{11})
Settling time (For step input of 180° in electric angle)	1ms Typ. (ACMD= "H")	2.5ms Typ. (ACMD= "H")
Response (As output response delay in electric angle)	$\pm 0.2^{\circ}$ Max./ $10,000\text{min}^{-1}$	$\pm 0.4^{\circ}$ Max./ $10,000\text{min}^{-1}$
2 phase pulse signal (A,B)	256C/T	1,024C/T
Source dissipation	DC5V $\pm 5\%$ 45mA Max. (30mA Typ.)	
Operating temperature	$-40 \sim +125^{\circ}\text{C}$	
Storage temperature	$-65 \sim +150^{\circ}\text{C}$	
Humidity	90%Rh Max.	
Mass	1g Max.

Connection of Smartcoder[®] (AU6802N1) to Resolvers

- ① The system to convert resolver signals (analog) to digital data is shown in the block diagram below.
- ② Please set the exciting source of a resolver to the exciting voltage / frequency specified in resolver specifications, by means of a buffer amplifier.
But when the specified voltage cannot be secured by reason of DC power source for the buffer amplifier, please refer to specifications of the Smartcoder. (Drawing No.801101411I40)
- ③ For details about connection of Smartcoder[®] (AU6802N1) , please refer to specifications of the Smartcoder. (Drawing No.801101411I40)

Installation of Resolvers

Attachment of resolvers (Singlsyn®)

Ex. ① Attaching a resolver inside of a motor

Ex. ② Attaching a resolver outside of a motor

Ex. ③ Attaching a resolver by use of magnetic shield-cum-fixing plate

Ex. ④ Attaching a resolver by use of attaching nails

Attaching way of Resolvers (Smartsyn®)

① Groove Type

② Flange Type

※Holders and screws are optional.

Holders for Resolvers

※ Holders are optional.

A resolver is a precise instrument and it must be used with full understanding of safety notes to maximize its performance.

The following is the gist of safety precautions :

(1) Safety notes on unpacking

- ① After opening the package, check the appearance of the resolver for any abnormality.
- ② Do not touch coiled sections.
- ③ Do not carry or shake the resolver by the leads.
- ④ In carrying the resolver, be careful not to jar it because such a shock can cause malfunction.

(2) Safety notes on installation

- ① As to axial runout of a motor shaft, please refer to the mounting tolerances on page 23.
- ② Never use the resolver in the presence of corrosive gas or liquid.
- ③ Never use the resolver in the presence of radiation.
- ④ In installing the resolver, do not give forcible impact to it. Particularly do not hit the coiled sections.
- ⑤ In case of the presence of a strong external magnetic field around the resolver, it affects the magnetic flux in the resolver and may result in some electrical errors. In this case, please consider setting some shielding in the resolver.

(3) Safety notes on wiring

- ① In case of the presence of a large noise source in the vicinity or in case of a long transmission line, twisted pair lines with shield in each pair should basically be used.
- ② If the resolver is connected to imbalanced loads for each output of 2 phases, two output voltages become imbalanced and may result in some electric errors. Therefore, the loads of 2 phases should be in the same condition.

(4) Safety notes on pre-operation

- ① Please double-check if the stator and the rotor are firmly fixed.

(5) Safety notes on operation

- ① Be sure to use the resolver under the specified ambient temperature, relative humidity and rotating speed. If the resolver is used for a long time under the conditions that relative humidity is near 100%, the electrical insulation of the resolver may gradually deteriorate. In such a case, some protective cover for the resolver is recommended.
- ② Do not touch the rotating shaft.
- ③ Do not drop or splash any water or oil onto the products.
- ④ Consult us about the use of the encoder in a place with much vibration and shock.

Types and Designations of Protective Structure

1 . Designations of protective structures

Types of protective structures are designated with the symbol IP, First coding in Table1, and Second coding in Table2 in this order.

IP 3 0

Table1 : Types of protective structures against entry of solids

First Coding	Protection Degree
3 (Semi totally-enclosed type)	Solids of 2.5mm or over in diameter do not enter inside.
4 (Totally-enclosed type)	Solids of 1.0mm or over in diameter do not enter inside.
5 (Dustproof type)	Dust that impairs the designed operation or safety of sensors do not enter inside.
6 (Dusttight type)	Dust particles do not enter inside.

Table2 : Types of protective structures against entry of water

Second Coding	Protection Degree
0 (Open type)	Not protected against entry of water.
2 (Drip-proof 2 type)	Subject to no harmful effects by waterdrops falling at angles 15° or less from vertical.
3 (Rain-proof type)	Subject to no harmful effects by waterdrops falling at angles 60° or less from vertical.
4 (Spray-proof type)	Subject to no harmful effects by water spray from any direction.
5 (Jet-proof type)	Subject to no harmful effects by water jets from any direction.
6 (Water-proof type)	Impervious to water in strong jets from any direction. (Note 1)
7 (Immersion-proof type)	No water entering when immersed under water at specified pressure for specified time.

Note (1) "Water-proof" means a structure that does not allow the entry of water against strong water jets from any directions, but it does not mean a structure that allows use under water.

WARRANTY

Tamagawa Seiki warrants that this product is free from defects in material or workmanship under normal use and service for a period of one year from the date of shipment from its factory. This warranty, however, excludes incidental and consequential damages caused by careless use of the product by the user. Even after the warranty period, Tamagawa Seiki offers repair service, with charge, in order to maintain the quality of the product. The MTBF (mean time between failures) of our product is quite long; yet, the predictable failure rate is not zero. The user is advised, therefore, that multiple safety means be incorporated in your system or product so as to prevent any consequential troubles resulting from the failure of our product.
