Food Service Griddle Cleaning Process

5 Steps for Cleaning

Step 1 - Loosen Food

- Loosen cooked-on foods and oils by scraping the griddle surface with the Unger ErgoTec® Long Handle or Short Handle Grill Scraper.
- Scraping at a low angle will remove the greatest amount of cooked-on foods, and will protect the griddle surface from blade nicks and scratches.

Step 2 - Remove Loose Food

- Remove loose foods and oil from the griddle surface using the Griddle High Heat Squeegee.
- Scrape excess food and oil into the grease trap at the front corner of the griddle.

Step 3 - Clean Griddle

- Lower the griddle temperature, as recommended by the equipment manufacturer or cleaning chemical manufacturer.
- Apply grill cleaner or liquid degreaser to entire surface of griddle.
- Scrub surface of griddle using a woven abrasive pad. For safety and best results, use the Griddle High Heat Squeegee to firmly hold down the abrasive pad.

Step 4 - Remove Cleaner

- Squeegee excess food and oil into the grease trap.
- Use a clean, wet cloth to remove any remaining degreaser or oil from griddle surface.

Step 5 - Final Touch Up*

- Use Unger MicroWipe™ 500 Microfiber Cloth and spray or liquid degreaser to wipe off stainless steel front, edges and sides.
- Season clean griddle surface with light cooking oil. Spread oil with a clean Griddle High Heat Squeegee.

*Using microfiber on a hot surface may result in the microfiber melting.

Restroom Cleaning Daily & Project Cleaning

MKITR Master Kit

DKITR Daily Restroom
Cleaning Kit

Unger offers two restroom cleaning kits that contain all the tools necessary for daily or project cleaning.

These tools provide a higher standard of hygiene and are ergonomically designed to increase worker productivity and improve worker health. That simplifies training and prevents the risk of cross-contamination.

- All tools fit compatibly on standard janitorial carts.
- The tools are designed to remove dirt effectively and to prevent bacteria from spreading.
- The microfiber tools remove dirt better from uneven surfaces and require less use of chemicals.
- The Unger cleaning process and tools provide better hygiene, increase productivity and enhance ergonomic performance.

- Holder can be hand carried, hung on a cart or set on the floor. It is also easy to clean – step on footrest to unscrew base, empty excess liquid and disinfect.

Expert Tips – How Professionals Scrape

- Check if glass is scratch-resistant and suitable for scraper use. Unsuitable glass surfaces include: plexiglass, crown glass, solar glass and safety glass (ESG). Always follow the manufacturer's instructions.
- Perform a scrape test in advance on a small section.
- Before starting, check the glass for any damage and report it, if necessary.
- Check the blade for damage and change it, or reverse it.
- The surface to be scraped should always be wet.
- It is best to use a releasing agent, such as "EasyGlideGlassCleaner."
- Scrape in only one direction. Never pull the scraper back as this may cause scratches.
- After scraping, check if adhesive or stucco residues are stuck to blade. If necessary, change or reverse blade.

Blade Info

- Made of extra-sharp carbon or stainless steel.
- Both sides are lacquered for longer rust protection.
- Safely packed and stored in convenient plastic dispenser. Blades stay dry and are always available in safe dispenser.
- **ATTENTION:** Unger blades are razor sharp. Always handle with greatest care. Use caution when changing blade.
