VIDEO APPLICATIONS

VIDEO AND RGB CONVERTER/PROCESSOR

K4600

LEVEL 5

To process a PAL colour video signal it first has to be converted back into the original Red, Green and Blue signals. In this way the colours can be adjusted separately along with, the colour intensity, brightness and contrast. After processing, the signal can then be converted back into the PAL video signal. A choice can be made between PAL Video or RGB outputs. In addition a place has been provided on the PCB for a UHF modulator (our type RFMOD), such that the antenna input of the TV or video can also be used. It is also possible to connect a SVHS input signal.

Specifications:

- colour system: PAL (CCIR)
- controls for brightness, contrast and saturation
- separated controls for Red, Green and Blue
- composite video input (RCA-connector)
- RGB input (option)
- input level: 1Vpp
- input impedance: 75 ohm
- composite video output (RCA-connector)
- RGB-output: 9-pin SUB-D
- output level: 1Vpp
- output impedance: 75 ohm
- housing included
- power supply: 16VDC / 0.5A unregulated
- PCB dimensions: 6.7" x 5.5"
- dimensions: 7.9" x 2.6" x 6.7"

LIQUID LEVEL CONTROLLER

K2639

LEVEL 3

Forgotten to turn off the tap, leaking washing machines, water level dropping in your aquarium, rain tank or water tank suddenly dry or over flowing, water in your cellar, etc. Such situations are often the cause of trouble and financial burden. Prevention is better than cure. So use this fluid detector. This multifunctional device is easy to use in a variety of applications : 1) LED control of set fluid level : LOW, MIDDLE, HIGH ; 2) Controller : the relay automatically switches a pump and/or valve to keep the fluid level between the LOW and HIGH marks ; 3) Alarm : if the sensor detects a level which is too high or too low (selectable), the relay will operate a bell or other alarm device.

Specifications:

- power supply: 12-14V AC or 16-18V DC / 100mA
- relay output: 240V / 3A max.
- dimensions:
 - controller PCB: 4.1 x 2.4"
 - sensor PCB: 4.1 x 1"

DUAL ELECTRONIC DICE

K3400

LEVEL 1

Board games provide an excellent source of pleasant and healthy entertainment. However, the dice can be a constant source of distraction : they fall off the table, allow cheating, one or more players don't see the results properly and so on. There can be no doubt at all about the result displayed on this electronic dice module, and cheating is out of the question. Two fully independent dice. At your choice you can play with one or two dice. Displays are switched off automatically after 30 seconds to save battery power.

Specifications:

- power supply: 8 to 12V DC or 6V AC / 60mA
- PCB dimensions: 3 x 2.8"

STEREO TUBE AMPLIFIER / CHROME VERSION K4040

LEVEL 5

For most of us a high power tube amplifier is unaffordable. This kit changes that, so that now everybody can enjoy that sublime "tube sound". The sound of tubes has never been surpassed, nor by transistors, nor by FETs. In the course of developing this amplifier, special attention was given to the housing so that the expensive tubes are on display in a way that is very pleasing to the eye. The weakest point of an tube amplifier are the output transformers ; that's the reason why we use ultra-linear and over-rated output transformers (toroidal) to guarantee a rich bass response. To extend the life of the precious valves, the amplifier is provided with an switch on delay, so that the high voltage is switched on when the tubes are warmed up.

Features:

- pure valve sound with high quality EL34 tubes
- high quality black and chrome housing
- chrome valve socket covers
- easy bias adjustment with LED indication
- removable bottom for easy access and service

INTERFACE SYSTEMS & PROGRAMMERS

RELAY CARD

K2633

LEVEL 2

Connecting a number of relays to the outputs of an electronic network may seem very simple, but in reality it might possibly create some problems regarding the cabling. This kit provides an attractive and compact alternative. Moreover, it can be assembled and connected very rapidly.

- Specifications:**
- 4 x 3A relay outputs
 - power supply: 9V DC / 300mA
 - pcb dimensions: 3 x 2.7"

QUAD TRIAC SWITCH CARD

K2634

LEVEL 2

Relays are usually used to switch AC voltages by means of an electronic control because of their simplicity. However, when switching occurs too frequently or too quickly the life time of the contact points is shortened considerably. This can be solved perfectly by replacing the relays with a triac. Using optocouplers, the entire interface network remains electrically isolated from the voltage that has to be switched.

- Specifications:**
- 4 triac outputs: 4 triac outputs of 1.5A (uncooled, 4A cooled)
 - power supply: 9V DC, 200mA
 - PCB dimensions: 3.1 x 3.5"

DC TO PULSE WIDTH MODULATOR

K8004

LEVEL 3

This control circuit is ideal for the accurate control of DC motors, lighting levels, small heaters as well as other applications. The circuit converts a DC voltage into a series of pulses, such that the pulse duration is directly proportional to the value of the DC voltage. The great advantage of such a circuit is that almost no power is lost in the control circuit. Protected against overload and short circuit.

Specifications:

- power supply: 8 to 35V DC
- maximum output current: 6.5A
- input voltage: between 2.5 and 35V DC
- dimensions: 3.4 x 1.9 x 1.8"

HEAT-SHRINKABLE TUBING

HEAT-SHRINKABLE TUBING 2 : 1 - LOW-COST

HEAT-SHRINKABLE TUBING 2 : 1 - LOW-COST - BLACK - IN BOX

Heat-shrinkable tubing is universally applied for the insulation of connections or for the end-handling of electric wire, for the insulation of soldered points on resistors and capacitors, for the identification and encapsulation of electric wire, for the corrosion-proofing of metallic rods or tubes and for the protection of antennas. Heat-shrinkable tubes are used for the corrosion-proof and waterproof connection of fibre optic cable.

This is thin-walled, flexible, irradiated polyolefin tubing with a smooth exterior. It offers excellent tensile strength and low water absorption. The max. shrinking ratio is 50% and the material is flame-retardant.

Specifications:

- continuous operating temperature range: -67 to 221 °F
- shrinking ratio: 2 : 1
- basic material: polyolefin
- shrinking temperature: 194°F
- flammability: self-extinguishing

BUZZERS & SIRENS

BUZZERS

SINGLE-PULSE BUZZERS

The Velleman electric piezo buzzers are specifically designed for applications requiring a highly reliable alarm or signal with a completely solid state and no electromechanical contact (oscillating circuit is built in). They are replacing the conventional electromagnetic buzzers because of their low power consumption, the extremely clear and penetrating sound, the absence of electrical noise, their compact design and their limited weight. A variety of models is available for various tone functions.

WIMA CAPACITORS

WIMA MKS4

WIMA capacitors have reliable internal end terminations. They use a simple concept: the wire makes electrical contact with the complete surface of the electrode, which ensures minimal inductance. This results in capacitors with a good attenuation and self-resonance (see technical data and graphs). Capacitors that meet strict requirements PCM 7.5 - 37.5mm.

Metallised polyester film.
